1. New Survey

Yahoo group: pro94owners
Date: 1999-12-11 06:26:50 UTC
From: pro94owners-owner@xxxxxxx.xxx
Topic: 1 Message: 1

Hello,

There is a new survey for the pro94owners community.

I am Happy with this Scanner?

Possible answers are:

o Yes
o No
o Dont know yet

To vote, please visit the following web page:

http://www.onelist.com/surveys/pro94owners

Note: Please do not reply to this message. Survey votes are not collected via email. To vote, you must go to the ONElist website.

Thanks!

pro94owners Owner

2. Welcome!

In Reply to: The Ostracized PRO-92: What a shame it's a Dog posted by Mike Meltzer on December 08, 1999 at 22:35:33:

Mike-

You wondered if the GRE PRO-92 would be a good choice for EDACS, compared to the Uniden PRO-94 or BC245.

I think the BC245/PRO94 is FAR better for EDACS than the PRO-92. There is a major difference is functionality.

AFS, with the partial entry feature called XPAND, was developed in field testing with EDACS systems around the US. It was created to provide a flexible, easy tool to explore EDACS.

AFS AND XPAND IN SEARCH MODE

With the BC245/PRO94 in SEARCH mode, you will hear all active talkgroups on the system. When you hear something interesting just press HOLD to stay with that talkgroup. Say you hear a fire call on 04-041. Staying in SEARCH mode you enter 0-4-dot-Enter and you instantly narrow reception to the fire agency, and you are now excluding the rest of the system. As fire communications occur, you hear them even on unexpected talkgroups.

You can't do anything like this on the PRO-92. Yes, you can press TRUNK to hold on whatever talkgroup the radio has been letting you hear -- but be aware that in 'open' mode it doesn't let you hear all the system activity, because it follows ONLY ONE talkgroup at a time, and during that time you don't hear other talkgroups. Only when that talkgroup is idle for 4 seconds does it let you hear other system activity. Since you don't know what you are missing you may not notice this happening. (This is similar to the BC245/PRO94 with DELAY activated - except there you can turn DELAY on or off.)

AFS WITH MULTIPLE SCANLISTS

With the BC245/PRO94 you can use AFS when programming scan lists. Taking the fire agency as an example again, you could store "04-" in scanlist 1 as the only entry. Powerfully, this one simple entry includes ALL the talkgroups in the fire agency. Then turning that scanlist on or off (and you have 10 in the BC245) you can select or de-select the fire agency as you prefer in your scanning mix. The assortment of scanlists, the flexibility of AFS combine to make a remarkable advantage for the BC245/PRO94.

Again, you can't do anything like this with the PRO-92. You will have to deal with each individual fire talkgroup and there is only big bank to work with.

LOCKOUT DURING SEARCH

With the BC245/PRO94 if you want to listen for rarely used talkgroups, you can start in SEARCH mode and hit LOCKOUT each time an uninteresting talkgroup comes up. As you exclude talkgroups one-by-one the radio will get pretty quiet -- and now you will only hear those infrequent, and perhaps more interesting, talkgroups.

Once again, you can't do anything like this with the PRO-92.

AFS SHOWS TALKGROUP FAMILY

AFS in the BC245/PRO94 lets you see what agency or fleet talkgroups are in because it reflects the intrinic structure of EDACS. You know something about a talkgroup as soon as you see it on the screen. But decimal display in the PRO-92 doesn't help you recognize a talkgroup or know what its relatives are.

Certainly the PRO-92 has good audio. It has alpha-tagging and the instant PL decode is impressive. I think it is styled nicely. On the negative side the backlighting is inferior, the buttons are smaller, it is heavier, can't be controlled by PC, doesn't come with a charger, uses a questionable method for Motorola tracking, and is more expensive.

But the question was -- is the PRO-92 a good choice for EDACS?

THE BOTTOM LINE

The answer is that for EDACS the PRO-92 is limited and awkward compared to the BC245/PRO94. The BC245/PRO94 is a sportscar, but the PRO-92 is a sedan. If you only want to listen to a few routine talkgroups, take the time to program alpha-tags and don't change them much, it would work well. But if you want the tactical flexibility with EDACS to be able to quickly change what you are listening to, follow events, or to poke around and find new talkgroups, then the BC245/PRO94 is much better.

When you compare the PRO-94 and the PRO-92 side-by-side you may want to try these features.

-Terry Brennan-

4. Details on PRO-94

Yahoo group: pro94owners
Date: 1999-12-11 07:50:06 UTC
From: harryp10@xxxxxxx.xxx
Topic: 4 Message: 4

Thanks to Jeff Goldman for providing these details on his newly acquired Radio Shack PRO-94

While memory is composed of 1000 channels, it is logically divided into two sections label 'A' and 'B'
For the purposes of scanning, you can link any of the 10 banks within A or within B, but you can't link across A and B (in other words, all linked scan banks have to come from A OR from B; no mixing and matching). This restriction will supposedly NOT be found on the upcoming PRO-2052
Each bank is configured to be a conventional or a trunked bank (a la BC235XLT)
All 10 banks within a section can be linked to be scanned simultaneously BUT they must all be trunked or they must all be conventional - YOU CAN NOT SCAN CONVENTIONAL AND TRUNKED AT THE SAME TIME!
Each trunked bank has 5 "scan lists" with each list capable of holding 10 IDs each (a la BC235XLT). So that's 500 IDs for A and 500 IDs for B if all 20 banks are used for trunked scanning
Like the BC245XLT, the PRO-94 DOES HAVE the 5 second Multi-Track delay!
There is no Autolight feature (like the BC245XLT)
There is no attenuator
The key beep volume is fixed but can be turned off
There is Data Skip which can be used during scan and search provided no AM signals are tuned and priority is off
The battery compartment takes 4 AAs and there is a switch inside that enables or disables charging of the cells via the DC power jack
There is a battery saver when sitting on a channel which kicks in after 5 seconds of inactivity. Once engaged, an indicator appears on the LCD (a la PRO-67) Jeff says the radio emits an annoying double-click as the battery saver cycles on and off
When programming, there is no duplicate frequency check for conventional freqs but there is for trunked freqs
There is direct search and limit search which share a common 20 frequency search lockout bank. There are also 10 monitor memories for storing search discovered freqs
There is also Service Search for police, fire, weather, aircraft, marine and ham radio. Jeff says the POL setting contains almost no police frequencies but it composed of almost all fire and EMS freqs
The weather service search only contains the 7 NOAA freqs used in the US
Each conventional bank can have 1 priority channel
Like the BC245XLT, each trunked "scan list" can have 1 priority trunk ID
There are the 100 trunk ID lockouts per "scan list"
The status bit and tone disconnect functions are available for scanning Motorola trunked systems
The radio can decode and display basic SAME weather info. When put into

SAME alert mode, the radio goes into "sleep mode" and can do nothing else until the SAME alert signal is broadcast
Jeff describes the audio as a bit more muffled than the BC245XLT, and that it distorts at a lower volume setting as well
Jeff describes the keys as being small which can create some
Jeff says he digits on the LCD are a bit smaller than those on the 245
Jeff says the earphone jack does not appear to be current limited and that it provides the usual monaural signal
Jeff says the stock ducky appears poor in 400 MHz range
Jeff says the manual lists 20 birdies

5. I am hopeing for a PRO-94A

Yahoo group: pro94owners
Date: 1999-12-11 16:23:12 UTC
From: Dave McCormick
Topic: 5 Message: 5

I have returned two PRO-94's after comparing them to my BC245XLT. The RadioShack I got them from wanted my opinion after trying another.
Wile the AFS talkgroup decode is a nice feature, the five second delay and no conventional scan has made my decision to return both test units. I can live with the switchable memory bank problem in it's current configuration.

In the past RadioShack has returned to the drawing board to add features to there Uniden produced Trunktrackers, this has been seen on the PRO-90, 91 and 2050 as an "A" model. I hope that the PRO-94, and near clone PRO-2052, get the additional features found on the BC245XLT. The PC interface would not "need" to be added to the 94, but all the other standard features are a must! The BC245XLT is supposedly getting the five second delay removed in the spring production runs, so RadioShack should do the same! Not deleting the five second delay is unacceptable.

The price of the BC245XLT is down to $200 making even the "sale" price of the 94 too high. Soon the Price of the PRO-94 will return to the catalog price of $299.99, how many 94's will be sold then? Could this be the end of 94 sales until RadioShack has another sale or price reduction? Unless the uninformed 94 consumer can see the difference in price/features verses the 245, I guess a few more could be sold. Even the PRO-2052 is overpriced, compared to the 245.

The bottom line is if the BC245XLT was not available, then it would have stayed in my collection. In my opinion more features added rather than deleted from the current model is what will sell the next RadioShack Trunktrackers, not the next trimmed down version.

Dave K9DV

How do I get the download?

13. 1.Zipped File "Download"? 2.Re-Post's?

Yahoo group: pro94owners
Date: 1999-12-12 15:16:11 UTC
From: harryp10@xxxxxxx.xxx
Topic: 13 Message: 13

1.To answer "Scannut" post,you should click on files,then "double click"
on the "zip file". It should "automatically" start the "download.

2.To "Re-Post" to a "Post",as far as I can tell,you need to have your Subscription
options:set
to "send e-mail messages". This way when you re-ply to the message,it is then directly sent
to the "pro94owners@onelist.com"(and the rest of the "Group" with e-mail "options"
settings "on").
Unless anyone here,starts sending "Garbage"(which I approve or dis-approve of original
messages,
so don't waste yout time trying)I would recomend "all members to change there settings to
this
"Option". I also have the "ability" to "Banned" anyone from the group!
So feel "FREE" and "SAFE" here,as this was made for you! ;-)
Also if you have e-mail sent to you,you will not need to come to the "Board" everyday!
Anything I "add" to the board,a "Post" will be made and the Archive will
Always be open to you. So "ENJOY"!

Moderator,
Harry

15. Energizer Batteries!

Yahoo group: pro94owners
Date: 1999-12-13 03:58:47 UTC
From: harryp10@xxxxxxx.xxx
Topic: 15 Message: 15

K-MART has Energizer Batteries On sale Dec 12-18th(this week).
It is "Buy 2 Packs,get 3rd FREE",any size(thinking here AA's). The packs I bought also had 2 "FREE" in the pack already. So I got 30 Batteries for $13. Thats 44 cents a Battery. A local news station here,did a test on all name brands and "Energizer" came out the winner(just kept going and going)!
I have used RS AA's and Raycovac in the PRO-94. The RS seemed to last longer then the Rayco Batteries. Wondering if the Batteries last longer,if the "Beep" on the radio is turned "off"(thinking maybe?).
I know all you guys(dont see any womens name in the member lists yet)dont have "Wall Warts". So lets get some "results" going here on the Battery life coming out of these units. The best I,ve gotten so far is about 6-8 hours with the RS brand.

Harry

16. Scanshack.com has "added" this group to there web page!

Yahoo group: pro94owners

From: harryp10@xxxxxxx.xxx
Topic: 16 Message: 16

Recived e-mail from the owner of the site http://www.scanshack.com/ has added this group to his site! Now we just need to show some activity here,that it has some life.
There are now 24 members and I know you guys and any gals are going to get tired of me just "posting".
You all have this radio and I am "sure" you have some questions,answers and thoughts about it. The PRO-94 has "kinda" been sitting on the "Back Burner" in all the NG's and it is up to us to bring out the "BEST" of this radio.
Share thoughts,programming tricks and any brillant ideas you may come up with.
From what I have read so far,this radio out performs the PRO-92 when it comes to "trunking" Edacs and Motorola systems(hands down).Now I know its not the BC245XLT(all though it is made by the same company)but hey,we got 4 AA "Batteries".
:-)
Also I have my doubts about RS discontinuing the production of the PRO-94, especially if 50% of the PRO-92's are being returned!
We would always like a Blond,while married to the Brunett,but then there's the Red Head! Oooooo
Uniden is laughing,all the way to the Bank!!!

From: Clint Bradford
Topic: 15 Message: 19

My grandfather always kept cells in the fridge...SO - folklore or reaity?

Here's what I found this morning.

"Refrigerating batteries extends shelf life because batteries produce electricity through a chemical reaction. Heat speeds up any reaction, while cold slows it down. Freeze your [car battery] and you'll extend its life because the juice won't leak away?but it'll also make those volts a little tough to use right away. That accounts for the belief occasionally voiced by mechanics that if a battery is left on the garage floor for an extended period, the concrete will "suck out the electricity." It does nothing of the kind, but a cold floor will substantially reduce a battery's output. The cure: warm it up first."

Doesn't seem to be based entire on "science." That was from "Return of the Straight Dope" in 1994.

My regular site for battery information, http:www.cadex.com , didn't seem to cover alkalines and refrigerators. But ANYTHING you'd ever need to know about rechargable cells is there!

Here's another text:

"Primary batteries such as the Leclanch? (zinc-carbon) or alkaline-manganese systems can have their storage lives extended significantly by storage at 0 ?C. For such cells, the loss of capacity on open circuit is caused mainly by chemical side reactions such as zinc corrosion. Such processes, like chemical reactions in general, are accelerated by a rise in temperature. Water loss is affected similarly.

"For a Leclanch? cell stored at room temperature the capacity will fall to about 90 per cent after a year, to 70 per cent after two, and to 40 per cent after three. At the much higher temperature of 45 ?C, it will have its capacity reduced to 20 per cent after only a year. However, at -20 ?C the capacity will have fallen to some 80 per cent after 10 years.

"Therefore, it is best to store such batteries in a refrigerator. Keeping them in a deep freeze, however, could damage the batteries if the can and seals have significantly different coefficients of expansion.

"Lithium batteries have longer shelf lives because when the shell is filled during manufacture, the lithium anode reacts rapidly with the electrolyte to form a compact passivating layer. This virtually stops further corrosion. Even when stored at room temperature, they can retain up to 90 per cent of capacity after 10 years. Some cells
(lithium-sulphur dioxide, for example) retain more than 70 per cent of their full capacity even after a year's storage at 70 ?C.

"In contrast, aqueous secondary cells have very poor charge retention--especially nickel-cadmium and nickel-metal hydride batteries. At room temperature the available energy of a recharged battery drops to about 50 per cent after six months' storage for new, low-discharge rate, sealed cells and to even lower values for cells which are high-power or which have been cycled many times. Again this loss may be reduced to about half of the room temperature amount by storing the charged cell in a refrigerator. Better still, keep such batteries connected to an appropriate charger when not in use."

SOUNDS like the guy knows what he's talking about! That's from an unpublished work by Colin Vincent. All I can find on the guy is is location: "Newport-on-Tay, Fife."

I'd rather have some scientific, cited studies to offer...but that's the best I can do right now. <g>

To all "Members"!

I was "searching" DogPile for some PRO-94 info.I
came across a scanner "web" page(went there)and "Wa-La",
Down at the bottom of it was this PRO94@... natually
I wanted to see where it would take me.To my "Surprise",
PRO94 has been in existence since October of 99".
But not "listed" in onelist.com directory?
Needless to say,I have "contacted"(or have attempted to)James the
"Owner" of the board and have asked him to "join" me here.
I see some of the same "Members" there as here!
Once James "contacts" me,We will work on a "solution" to
make us ONE BIG HAPPY FAMILY!
This is "why" I need another "Moderator"(So I don't
burn-out)and the "Board" falls apart!
In the "mean time" there will be NO CLOSING of this
Board. You guys are "STUCK" with me! :-)

Owner,Moderator,
Harry

From: Billy Bearden
Topic: 31 Message: 31

Hey Ya'll !
This Trick Worked In My Friend's Pro 90 So He Tried It In My 94 , & Lo-N-Behhold ! It Also Works In My Pro 94 As Well , So Theory Holds It Will Work For You Too !
Enter The Freq # 806 - 4000 Mhz Into 1 Of Your Channels (Delay Don't matter)
Preferably In A Bank You'll Use While Traveling In A City , But Anywhere Is Fine.
When You & Your 94 Get Within 3 - 4 Carlengths Of Someone Using A Non Digital
Cell Phone , You'll Be Able To Hear Thier Side Of The Conversation - A Unique way To Break The Monotony (According To My Friend .....)

33. RE: PRO-94 is a Uniden Product

Yahoo group: pro94owners
Date: 1999-12-16 16:15:50 UTC
From: Jack Elias
Topic: 3 Message: 33

I am interested in more detailed information as to how to do the procedure alluded to below. I have not been able to make this work, although I admit I have limited understanding of this radio and scanning in general. Perhaps Mr. Brennan could educate us some more?

<--Original Message -->

AFS, with the partial entry feature called XPAND, was developed in field testing
with EDACS systems around the US. It was created to provide a flexible, easy tool
to explore EDACS.

AFS AND XPAND IN SEARCH MODE

With the BC245/PRO94 in SEARCH mode, you will hear all active talkgroups on
the system. When you hear something interesting just press HOLD to stay with that
talkgroup. Say you hear a fire call on 04-041. Staying in SEARCH mode you enter
0-4-dot-Enter and you instantly narrow reception to the fire agency, and you are now
excluding the rest of the system. As fire communications occur, you hear them even
on unexpected talkgroups.

>talkgroups on
>the system. When you hear something interesting just press HOLD to stay
>with that
>talkgroup. Say you hear a fire call on 04-041. Staying in SEARCH mode

Above statment is if you want to just "HOLD" to a single "AFS"#
For instance,08-042.

Search Mode is="SRC" button(just below "HOLD" button) on the PRO-94.

>you enter
>0-4-dot-Enter and you instantly narrow reception to the fire agency,
>and you are now

While the "RADIO" is scanning a "TRUNKED" system and you read a "AFS"
group#(like 04-041)you can just enter 04.(enter,zero then four then
decimal(decimal being "dot")center button,last row of buttons on the
PRO-94(then press "E" button)lower right hand corner on the PRO-94.

>excluding the rest of the system. As fire communications occur, you
>hear them even
>on unexpected talkgroups.

You will then "HEAR" "ALL" talkgroups related to that talkgroup!
I have tried this and it works just like stated above.
(page 49 Owners Manual)

Also while scanning talkgroups or ID's you can "Change" from AFS# to Decimal
by pressing "E" button lower right hand corner on the PRO-94.
"Press' it again and it will change back to AFS.

If you don't understand about the AFS,vist the site http://gtrac.ztn.net/
and click on "EDACS GUIDE" then click on "Talkgroups",you will see AFS#'s
listed for individual talkgroups of any State you select.

This radio(PRO-94)works "quite" well,if you play around with the buttons and
read the Manual about 20 times!

Terry would answer this himself,but will say the same thing and as you can
Imagine,He is a "busy" man and and may take sometime to get back to you!

Hope this helps anyone with the same question as to this procedure.

:-)
Harry

35. Don't like 94

Yahoo group: pro94owners
Date: 1999-12-17 05:04:45 UTC
From: outrunsho21@xx.xxx
Topic: 35 Message: 35

Well I don't know how everyone else feels but compared to my pro-90 I don't like the Pro-94. It just seems like the volume hass a hiss to it. It doesn't monitor the motorola systems like I wish it would. It seems like it was just designed to scan edacs well and they just forgot about everything else.

Jason

>Well I don't know how everyone else feels but compared to my pro-90 I don't
>like the Pro-94.

* Well then Jason,Take it BACK!I am going to figure this one out if it kills
me. ;-)

>It just seems like the volume has a hiss to it.

* Did you ever think,it maybe the System "Hissing" and not your Radio? This
is 2 way Radio and not Digital Phones.

>It doesn't monitor the motorola systems like I wish it would.

* May I ask where you live? I am "tracking" a Motorola System" Over 30 miles
away(with the Rubber Duck antenna).But then of course,this is Florida(Very
Flat).Any Radio only picks up "Signals" with in the "Horizon Line".

>It seems like it was just designed to scan edacs well and they just forgot
>about everything else.

* This Radio was design to Track EDACS and Motorola system's.It has 4AA
batteries(compared to the 92 which has 6AA's and will cost you half as more
much to feed it batteries + another $150).The BC245XLT has "NO" AA's.I
suggest you go into the "Archive" files here on the Board and Read some more
about the PRO-94.Again I will "State",We would always like a Blonde,while
married to the Brunette,but then there's the Red Head.Get my Drift?
I will agree with you,that you would think somebody would make what we would
"all" like to have,guess they figure,you can't please everyone!

37. A "PLUG" for the PRO-94!

Yahoo group: pro94owners
Date: 1999-12-17 09:49:52 UTC
From: harryp10@hotmail.com
Topic: 37 Message: 37

This scanner is excellent in some of its receiving capabilities, but is dissapointing in others. As compared to the 200 channel Radio Shack handheld, this one has triple conversion which allows for greatly enhanced receiving for VHF and UHF. The dissapointing part is that for the 1240 to 1300 MHz band you need a relatively strong signal, around 4.0 Uv for the scanner to pick it up.

I own at this time a PRO-2039 scanner, and this handheld greatly beats it in all levels, which are receiving and channel storage. I will add that the PRO-2039 is not sold anymore, too old.

Channel search is quick, top speed 300 steps per second; slower scaning 100 steps per second. Frequency range is from 29 to 54 MHz, 108 to 174 MHz, 216 to 225 MHz, 380 to 512 MHz, 800 to 960 MHz (cellular blocked), and 1240 to 1300 MHz. Plus it has 1000 channels, but a disadvantage to it is that you can ONLY scan 500 channels at a time. There is 2 master banks, bank A and B. Only 1 master bank can be scanned at a time. If you want to scan bank A, you CAN'T scan bank B at the same time, and vice versa.

The price I agree on, but that's because I got it on sale and with a Radio Shack employee discount. Regular selling price is $300, but through Christmas of 99 it's on sale for $200, and being an employee of Radio Shack I get a 25% discount, so my price I had to pay was $165 with tax. There are other handhelds that are higher priced then this, but this one is worth it. Being an employee I get to test all the scanners, and this is the best handheld you can get if you want to scan and find new and interesting frequencies, plus with enhanced receive, it beats other handhelds as it will receive a station as another handheld will hear nothing.

From the beginner to the expert scanner listener will enojy the ease of programming this scanner. It only runs on 4 AA batteries and has a battery save feature, so you can run it more without a recharge. I greatly approve of this scanner and recommend it! I will rate this a 5 out of a scale of 1-5; 1 being worst and 5 being best.

42. Scanner Tip of the Millenium

Yahoo group: pro94owners
Date: 1999-12-18 18:24:32 UTC
From: GTubbesing@xxxxx.xxxxxxxxxxxxxxxxxx)
Topic: 42 Message: 42

OK, maybe not THE tip of the millenium, but, hey, there's less than 2 weeks left, so why not! Here's the tip:

As we all know, the Pro-94 cannot scan trunked and conventional systems simultaneously. However, the manual also says that a bank of channels can be only trunked or conventional frequencies, with no mixing. WRONG! Here's the trick. First, program in your trunked frequencies at the beginning of a bank, just as the manual states. Then, press the TRUNK button again to EXIT trunking mode. The MAN indicator should be on in the bottom left corner of the display. Now, go back in manual mode to the trunked frequencies you just entered and lock them out. Next, go to the first empty frequency after all your trunked frequency, press the PROG button, and start entering your conventional frequencies. When you finish entering frequencies, just press the SCAN button. Just make sure the bank where you just entered frequencies is active, and you're good to go. Conventional and trunked frequencies in the same bank! Hey, if you've got 500 channels or 1000 channels, why waste any of them and leave them blank? I say, use 'em all!

I just got mine yesterday.

Is this how your method works. If you lockout the trunked channels they are bypassed when scanning in non trunked mode.
When you scan in trunked mode it ignores the non trunked entries in the same bank.
And you still have to switch between Trunked and non trunked mode.

Can you scan banks A followed by B? I can only get A to scan or B to scan.

When I try to scan 4 banks it usually stays in the second bank, which is more active. It does not go bank to bank as during a regular non trunked scan.

Even with DATA on it still hangs up no some channels.
Pat

Topic: 41 Message: 50

Mark,
I'm going to start with the end of your post. I hope I can help clarify this for you. Page 59 and 60 are about programming fleet maps. You only have to worry about this if you are dealing with a Motorola Type I or a Motorola hybrid system. Most good scanning websites will list the fleetmap to use for a Type I system. All you have to do is match up your fleetmap with the fleetmap posted on the website.

On your EDACS question, if the talkgroup ID is 04-052, the 04 is the agency number, the 05 is the fleet number, and the 2 is the subfleet number. This means you would enter 04, then press the decimal key, then enter 052, then press E.

When scanning the talk group lists, the manual left out one important fact. First, you press the TRUNK button, choose which trunked banks you want to scan, then press the SCAN button to scan your talkgroup lists.

I hope this helps you out.

Happy scanning!

51. Re: Question about the 5-second "delay"?

Yahoo group: pro94owners
Date: 1999-12-19 07:39:06 UTC
From: Mark Lauretta
Topic: 49 Message: 51

The delay you're talking about is on page 51. When trunking, press delay and it puts a 5 second delay on every channel that pops up in all the banks being trunked.

Subject: [pro94owners] Question about the 5-second "delay"?

From: harryp10@...

The 5-second delay is or isnt on this radio?
pg 33 owners manual says you can progarm a 2-second delay
into the radio.Will that make a 7-second delay?
If I am not scanning just "SCAN id",I have AFS#'s "poping-up"
like popcorn with the so called 2-second delay off.
My 1st Trunk bank is so busy,I dont think it
has any time to search the 3rd Trunk bank I have programed.
For now Bank 2 is empty.
So my question is,does this 5-second delay pertain to Bank to
Bank or AFS# to AFS#?
pg 74 (specs) says Priority Sampling 2-seconds,Delay Time
2-seconds,Gssssss that only equals 4-seconds?

Topic: 42 Message: 54

Pat writes:
>Is this how your method works. If you lockout the trunked channels they are bypassed when scanning in non trunked mode. When you scan in trunked mode it ignores the non trunked entries in the same bank.

Pat, that is correct. In addition, you can change the priority channel to any channel within your bank of channels. Just press PROG, then enter the channel number you wish to designate as your priority channel, then press the PRIORITY (H/S) button. You have to physically enter the numbers for the channel you want as your priority channel, otherwise the scanner just jumps to the original priority channel without accepting the change.

>And you still have to switch between Trunked and non trunked mode.

That's right. You CANNOT scan both trunked and conventional channels at the same time, as you can with the 245XLT. If you do not lockout the trunked channels, it will scan through the channels, but the Pro-94 will not follow the trunked system properly.

>Can you scan banks A followed by B? I can only get A to scan or B to scan.

No. That's why I think they should call this a dual-banking scanner!

>When I try to scan 4 banks it usually stays in the second bank, which is more active. It does not go bank to bank as during a regular non trunked scan. Even with DATA on it still hangs up on some channels. Pat

It does go into the other banks. It's just that the scanner is so fast and efffective, that it scans through the avaiable banks before you can see it. If you have problems with the scanner hanging up on data channels, just lock out those channels!

Happy scanning!

55. Board Update!

Yahoo group: pro94owners
Date: 1999-12-19 08:34:44 UTC
From: harryp10@hotmail.com
Topic: 32 Message: 55

1. I have "added" My Onelist Member Profile as a txt.file.You can find
It in the "Files" section of this Board.Incase some of you are
Curious as to whom I am and what I do.

2. Here is a statement from Onelist about "SPAM"

About "SPAM" and ONElist
Q.
Is it possible for a "Spammer" to gather email addresses from
Onelist?

A.
It is extremely difficult for spammers to gather email addresses
from our service. ONElist has built a system around the concept of
Preventing bulk "harvesting" of email addresses.
There are protections in place:

1.No Non-Members or Members(My Setting)can access the Members area.

2.Message archives on the ONElist Web site display as
Masked email addresses(for example,Joe@...).

3.The Message Area(Digest)is only open to Members.

4.ONElist customer support representatives have the ability
to hold moderators and members accountable for their actions.

3. As of this Posting there are 80 Members.As the Group grows,you may
want to change your "Settings" to receive the "Digest Only".If a lot
of messages start being sent,you are going to have "A Lot" of e-mails.
To Reply to a post,just use(Edit)"Select All"(Edit)"Copy" and then
(Edit)"Paste"(using your mouse)the message you are Replying to at the
beginning of your post.Then at the bottom of the original message that
you are Reposting to,Type in your Reply(RE).
On the Subject line Type; RE:(Old Subject).

4. I am still "Looking" for someone to "Help" Moderate this Board(A Non-
Compensating position).The "Duties" would be the following:

1.Messages Approve,edit or delete messages.
2.Membership Approve,invite,add,unsubscribe,or ban members.

Any Responsible Member who would like to help keep this Board "Up and
Running".Please contact me at:pro94owners-owner@onelist.com

5. If and when the Group grows to 80-90 members,I will be looking into
getting the Board listed on some Bigger Scanner Web Pages.

6. The Survey stands at:17 YES
02 NO
03 Don't know yet

7. New Members:FYI any posts made today,will be in tomorrows digest,that's how the Board works.

From: Mark Lauretta
Topic: 42 Message: 56

When I try to scan 4 banks it usually stays in the second bank, which is more active. It does not go bank to bank as during a regular non trunked scan.

It will trunk bank to bank but only if the bank has been inactive for more than 5 seconds.
page 44
You can also skip to the next bank by holding "src" down for 3 seconds.
page 47

Topic: 42 Message: 57

>From: GTubbesing@... (Glen Tubbesing)
>
>I was never talking about 2 trunked systems in one bank. Can't do it,
>because you then have 2 control channels. 1 bank, 1 trunked system,
>that's the rule.

Where I live in the UK we have a 13 cell UHF Motorola SmartZone system,
so to get all the cells in you need 13 banks...
Now here is where the trick comes in..
If for instance I am in cell 1 (East side of the city) I cannot hear
cell 13 (West side), and if I am in cell 13 I cannot hear cell 1..
So I can put the frequencies for cells 1 and 13, together with both
control channels in one bank and the radio decides which one to use :-)
The above example has been simplified, but in practice I have 13 cells
in 5 banks and it all runs together OK..
I must admit to using a BC245 and not a PRO-94, but the problem and the
solution are exactly the same..

61. Re: Question about the 5-second "delay"?

Yahoo group: pro94owners
Date: 1999-12-19 17:34:09 UTC
From: GTubbesing@xxxxx.xxxxxxxxxxxxxxxxxx)
Topic: 49 Message: 61

The 5-second delay is from trunked bank to trunked bank. Despite what the others say, I think it's necessary, because you listen to the system for a few seconds to see if anything is happening, then jump to the next system. I WOULD NOT like it if the radio scanned through each trunked system as fast as it does through conventional frequencies, because I would feel as though I may be missing something if it only listened to a trunked system for half a second then went on to the next system. This implies that it would only wait for half a second at the end of a transmission before jumping to the next system. What if you have the delay on and someone is slow to respond, slower than 2 seconds. BOOM, the scanner jumps to the next busy system and you're listening in on that before you jump to the next system. Here in Las Vegas, I have 8 public service trunked systems programmed in my Pro-94. Four of them can get very busy at times. The other 4 have intermittent traffic, but to me they are just as important. If the scanner jumps too quickly out of a conversation on one of my less busy systems, I would be very frustrated. Of course, if they removed the delay completely, you'd still get people complaining about it, saying that it jumps too quickly out of a trunked system. Remember, you can't please all the people all the time!

65. 5 Second Delay

Yahoo group: pro94owners
Date: 1999-12-19 21:29:21 UTC
From: Billy Bearden
Topic: 65 Message: 65

Hey Guys (& Gals)
I Hear A Few People Complain (Whine ?)
About Some 5 Second Delay Scanning Between
Bank To Bank Or Trunk To Conventional -
I Bought A 94 2 Months Ago , I Was Using
(& Still Do) A Pro 90 (Mot Only Trunking)
Because In The Area I Live In Has 1 City Using
Motorola Type 2 & Another City Using Erricsson
EDACS , So I Wanted Full Tracking Capabilities , But Didn't
Wanna Blow $350 - $400 On A Pro 92 -
So I Now Mainly Use My 94 , But When I Hear Of Some Juicy Action On The
Radio - Say Some Multi Jurisdictional Police Chase - I Turn On Both My 90 &
94 To Hear The Whole Story ,
(HERE IS MY POINT)
With 2 Busy Police Forces In 2 Big Cities Using Trunked Radio
Systems , It Makes More Sense To Listen To Both Agencies On 2 Scanners -
That Way You Won't Miss Any Details. Using Just 1 Scanner With Or Without 5
Sec Delay Means Missing Something -
People Will Be Communicating On 1 Active Channel Even While You Are
Monoriting Another Active Channel , So You Miss That Also...
What Can You Possibly Miss In 5 Seconds Of Conversation
That's So Stinking Important It Would Alter A Person From Buying 1 Radio &
Not Another ?
Most Of The People Objecting To A 5 Sec Delay Already have Scanning
Experience & Own 2 - 5 Other Scanners Also , So Why Not Just Use Them During
Multi Agency Monoriting ?

From: "PJH" <p_j_h@...>
>Has anyone set up a talk group list for a talk group. How does it
work?

Yes. It works very well. Here in Las Vegas, we have a busy Motorola
system that is shared by the county and city fire departments, the water
district, the sanitaton district, airport operations, and by county
public works. I've got two scan lists set up for the fire departments,
one for airport security, and one for the water district. I just turn
off the ones I don't want to hear, just like turning off a conventional
bank of freqs if I don't want to hear ham radio chatter.

>Can you scan the list the same as you scan the trunk?

Yes. See above.

>Can I use the list to scan only one or two group ID in a talk group?
Pat

Absolutely. You can use it for just one or for one hundred IDs!

Happy scanning!

These sound like they may be CTCSS tones, used as PL's for the users.

>Can you set these tones on the pro-94?

No.

>Do you have to have the tone to receive them or will you here them all?

You don't need them for the Pro-94. You will hear everything, regardless of what the PL tone is.

>What the the D in D351 mean, digital?

Good question. Your guess is probably right, but I have no idea.

I have used a Pro90 for the past several years and just purchased a Pro94.
When the 90 is trunk tracking, each time the end of a transmission is reached there is no sound until the next transmission. The 94 on the other hand has a very annoying loud "click" at the end of each transmission. By the end, I mean when the ID is released and the scanner goes back to scanning. Has anyone alse had this problem? I have fooled with the squelch, but that doesn't change anything. I still get the "sput" after each release. I would be interested to know if this is common to this radio.
Thanks,
Windy

1.Several Women have joined the Board.I Welcome them "Aboard" and
ask everyone to refrain from using any Profanity within the Community/
Board/emails.

2.I have contacted Rich Wells over at "Strong Signals" and Requested
the group be "added" to the "Trunking Board" Mailing List.
The Request has been "Granted" and you will now find PRO-94 List
on that page.The "Link" is to:http://www.onelist.com/subscribe/pro94owners
I will expect the "Group" to grow larger cause his "site" has had
712,478 "hits" since March of "97".He is Averaging over 2000 per day!
"You may want to set your "Options" to "Digest Only" as the Group grows
if emails start "Flying" Back and Forth.
I am sure,We All respect Rich and how far he has bought us all with his
"Site".You will now find at the bottom of any emails sent through out
the "Community" a "link" for "Strong Signals" if you have a desire to
SURF on over there to get the latest "Scanner Scoop".

3.Again there is a "NEW" Survey,want to find out how much "juice" the
PRO-94 is using.Please pay the Survey a visit and add your input.

4.The Group now stands at 91 Members,not counting the 4 that have decided
to leave.Guess they are PRO's now and don't need anybody's help or ideas.
No "PUN" intended,but I can always use Help!

;-)

Hey Harry, a question.

"Why" do you "always" use "quotes" sometimes in the most "unusual" places?
For "emphasis" I guess?

Just "wondering" :)

Jack

86. Trunking Edacs and Motorola

Yahoo group: pro94owners
Date: 1999-12-22 02:22:44 UTC
From: eazyridera21@xxx.xxx
Topic: 86 Message: 86

I programmed my scanner to Trunk Edacs in Bank One. everything was working great. Then in Bank to I put a Motorola system in. Now My Motorola is Working in Bank 2 but my bank one is not working. I tried to turn of bank to and src bank one but it just over rides bank 1 and goes to Bank 2.Does anyone have any suggestions? Any Help would be Nice

THANKS

I hope you get your period key, caps key, and question mark key fixed real soon. Also, you might try to state your question in the form of a question so all of us who speak English can understand what your point is. Are you trying to ask if the Pro-94 will track VHF-Hi band in the trunk mode? If so, the answer is yes and read page 44 of your manual. If that's not what your question is, try again.

eazyridera21@... scribbled this note:
>I programmed my scanner to Trunk Edacs in Bank One. everything was working great. Then in Bank to I put a Motorola system in.

HUH??? in Bank to I... Oh... Bank "2"... OK, go on.

>Now My Motorola is Working in Bank 2 but my bank one is not working. I tried to turn of bank to and src bank one but it just over rides bank 1 and goes to Bank 2.Does anyone have any suggestions? Any Help would be Nice

OK, starting from the manual mode, press the TRUNK key. In the top left corner of the screen will appear the word "TRUNK" and right below that will be the letters 'M' and 'E'. If only one letter appears, press the down arrow repeatedly until both 'M' and 'E' show on the screen. Now, across the top of the screen will be a row of numbers that represents all the trunked systems you have programmed in your radio. Since you say you've only got 2 systems, then only 1 and 2 will show up on the top of the screen. If you do not have a 1 and a 2, then one of your systems was not programmed into the scanner as a trunked system. Re-program that trunked system back in to the scanner. Under each number should be a solid bar. This indicates the active trunked systems that the radio is set to scan. Press the number of the bank to turn the bar on and off. In your case, press 1 until the bar under 1 is on, then press 2 until the bar under 2 is off. Now press the SRC button to start scanning your trunked system.

Sorry for the bother. But I am new into scanning and have been reading a lot of reviews from "Strong Signals", and messages concerning different scanners. I live in Southern Maryland and they are going to be getting a truncked system sometime in the future. When is anybodies guess. I am currently trying to decide on a scanner. I am looking at the Pro92, Pro 94 or the BC245XLT for a scanner. I am hearing a lot of negative on the Pro 92 about flickering IDs and the battery used on the BC245XLT. Just beginning my reading here on the Pro94. Does anybodiy have any opinions on the three mentioned and to how to decide the best one to go with. Again my thanks! Merry Christmas to All!

Bill,

If you want a cheap scanner(until 12/24/99)that scans "Trunk" and
has 4AA's,its the PRO-94.Go read my ABCP's "post" over at
Strong Signals,Trunk Board.Its all comes back to,Different Strokes,For
Different Folks.Anyone who stays on the "Move",should go with the 4AA's
IMO.I don't need a PC "interface".Read more,but HURRY!

I Can Help Answer That One !
I Live In Williamsburg/Hampton Roads Virginia -
But The Locality Doesn't Really Matter....
Here Are Your Options , Listed Easiest To Hardest.
1) Continue To Post Freqs Wanted Adds For People To Supply You With The
Desired Freqs-
2) You Or Your Uncle Go To The Office Of This Plant
And Ask To See The Copy Of Their FCC License -
This Will Include All Freqs They Use -
3) Try Local Radio Shacks , Radio Clubs , Scanner Clubs &/Or Users To Find A
Frequency List -
4) Ride Along With Your Uncle , Monoriting The 800 Band While
His Radio Is Receiving Traffic , Making Monitor Memories Of ALL
Active Channels , Then Program Them In That Evening -
5) Do A Limit Search Of Freqs Between 823.0000 & 866.0000 Mhz
, Making Monitor Memories Of ALL Data Channels , Then Systematically Build A
Set Of Channels Around Each Individual
Data Channel You Found , Programming Them In Trunk Mode ,
& , Hoping You Do It Right , You'll Eventually Find Your Uncle's Work
System -
6) Steal One Of Your Uncles Work Radios & Forget The Pro 94

I live in Madison County, IL. One of the better sources of info on St. Louis Area Trunked systems is Todd Hartzels page at http://www.icon-stl.net/~toddh/trunk.htm . Check out the business links and you may find what you're looking for. Todd has info on Motorola and EDACS sites in Illinois and Missouri (St. Louis Area). Good luck.

>>ka101@... wrote:
>>...Southern Maryland...getting a truncked system...When is anybody's guess...

Others here who know scanners better will be able to assist you...

Now might be the time to attend city council/county supervisor meetings - and see just exactly what new radio system you - the taxpayer - will be paying for!

Armed with that information, you might be able to better choose a scanner to meet your needs.

Happy holidays.

Ed,

All I can offer you right now(cause I am tracking EDACS)is:

1.Owners Manual pg 47 "Turning the Status Bit Ignore(S-bit)On
or Off".
2.pg 60 "Programming a Fleet Map"
3.pg 56 Note: www.trunkscanner.com

Hope you get some better feed back then this.One thing I'm pretty sure
of,is the Status Bit Ingore only works while you are "tracking" a Motorola
System.Or you will not be able to turn it On
or Off in any other mode! I am still reading this Manual and have had the
radio for 7 weeks now.I am getting "Better" at it!!!

If you say so..my source for this is a person who works with the supervisor for the dispatch center that operates this equipment, and is insistent that it's a Type I Hybrid. It shows up in the Guide that I got with the Pro-94 as being a Motorola Type IIi, whatever the heck that is...

Thanks for the help nontheless!

Easy,

I can get a Motorola system,30 miles away from me with the Rubber
Duck antenna,but I live in Florida. Signals only travel the Horizon Line. If
you are in a Valley or have Mountains around you,a Discone antenna may help.
There is a "post" in Todays Digest about one that Renee has installed,with
quite a good review!

Ray,

You have to have the Motorola Type 1 system "active"(scanning it)in
order to get the Status bit "ON or Off" to come up. It will not show up in
any other Mode. I am scanning a EDACS and tried the "bit" on and off thing
with no sign of it showing up at all.I believe this is the answer you are
looking for. This has confused quite a number of people! Re-read page-47.

>Thanks for the help nontheless!
>Ed

Well, Ed, this very well could be a Hybrid system. Type IIi is the Motorola designation for a Hybrid system, and as I said, a hybrid system is one that uses a combination of Type I and Type II radios. If you look on page 57 of your PRO-94 manual, there is a listing of the size codes for each block for all 16 preset fleet maps. Unfortunately, they left out the chart defining the size codes in the PRO-94 manual. But, if you've got a PRO-90, that manual lists the size codes, and it says that S0 is the size code reserved for Type II id's. Since E1P3 does not have any blocks designated with the S0 size code, it is strictly a Type I fleet map. But, if this is a misprint, and the fleet map is actually E1P13, then there are 3 blocks designated as Type II blocks, and therefore, this would be a Hybrid IIi system. But, as I said, this does not affect how you program your system. The only thing that is affected is what fleetmap you program in your scanner for the system desired.

I hope this helps make my reasoning more clear to you.

1. The group now stands at just over 100 Members.I expect some more after "Santa" arrives.It has had some good response(with some bumps) and hope it helps all of you in some way.

2. Today by 12:00P.M.(EST)I should have uploaded the weeks past digest (Digest7-13) as a winzip.file that you will be able to find in the "File" section of the board.

3. For anyone who can not "download" the Owners Manual or unzip it (like webtv.owners),if you would like it sent email to you,contact me at: pro94owners-owner@onelist.com stating you would like a copy.
I will send it as time allows me.
It is 54 pages(plain txt.format)and 137KB in size.It also includes the"Parts List"(for thoese of you who may want to try and modify it, he-he)that somehow RS forgot to add to the Owners Manual.

4. I will only do "Updates" once a week from here on out.I don't mean to be a pain in the butt,but the Board is only 2 weeks old and I found all of these to be fundamental to the group and its growth.
I am also contacting other sources about are existence.Feel free to ask any questions(no matter how simple)or "post" brillant ideas or discoveries about the PRO-94.Any Replies that are not within Community Standards will be "address".

5. Wishing "All" of you a HAPPY HOLIDAYS and a HAPPY NEW YEAR!

<Harry>

How far away are you talking about? Cross country, or cross-town? Keep in mind that VHF, UHF, 800 MHz freqs normally are line-of-sight. That's why the transmit towers are located on top of mountains, tall towers, and tall buildings. Any more than about 60 miles is beyond the range of most systems. The only exception would be if you were to experience a period of Tropospheric Ducting. I've never experienced this phenomenon, but it occurs most often during the summer months, and sometimes occurs in the presence of large storm systems.

Hope this helps.

OK, I did what you said to do, and I notice that it scans the actual frequency sometimes, and when somebody talks, it will show the Fleetmap designation with a "5" or a "2" or a "9" before it. After they are done talking, the number flashes..is this normal?

From: fyrefightr@xxx.xxx
Topic: 124 Message: 124

Hi, I just got the Pro 94 for Christmas and am having a hell
of a time figuring out the directions. I live in Anchorage,AK
and the municipality uses Motorola type II. I programed the 18
freqs it required and am writing down all the talk groups I think
stuff like 33 008 and 32 846. Also I did something that I dont
know what I did to see something like 400-0 It seems that every
time the Fire dept talks now I dont see the freq or the talk group
but just the 400 thing. also am a firefighter in the Air Force and
I think we use the EDACS. I programmed the 7 freqs in numerical order
and now can scan both but that 5 sec delay is killing me. The directions
themselves are killing me. Do I need to know about fleet maps and stuff
Is there an easier manual someone has created for those with no trunking
experience? Maybe a phone call will help and I can get one on one asst/
Please help

Since I needed another set of ni-cads anyway, I decided to go ahead and
get a set of the Nickel Metal-Hydride (Ni-HM) batteries. The manual for
the Pro-94 says this is okay. They are twice as expensive but are
supposed to last a lot longer and they do not have the memory problem the
regular ni-cads have. I haven't done a longevity test yet but they seem
to work fine so far. Take care.

>Maddawg,

One would think with 125 Members,that there would be more then 9 votes
on the "Survey".Part of the problem here I believe is not enough time to
really know yet.
Why I didnt include Ni-cads,is cause they are"Recargeable"(kinda fit
in with the Wall Wart vote).But I do hope we get some more votes soon about
using AA's!I will run this "Survey" till we get some better Member
"Results"(I can only do 1 Survey at a time).

Tony,

Chill!Have you read some of the "past" Digest from this Group?They
are in the "Message" section,under "Archive".Also they are in the "File"
section "Zipped Up" by the week.This Radio takes some time getting use
to,especially for a "Newbie".You will also need to Read the Owners Manual
about 20 times,before it all sinks in.Hope you get better help then this.I
am tracking a EDACS sys(another reason I personally needed the PRO94)which
seems to be a easier system to follow then a Motorola.Alot of Members have
there Settings set to:"Web Only/No Mail",So it could take awhile to get a
decent Answer.Personally I wish all Members would get the "Daliy Digest"
each day in there mail.This way they could all help Answer question better
and faster.With 125 Members,we should be able to figure out anything!
I will "Post" this request(Daliy Digest)on the next Board Update.

Just got the little critter on Friday (last day of the sale price!), so didn't have much info yet. I am using NiMH cells ($2.25 each from http://www.thomas-distributing.com/) in just about everything now, and seem to get at least 12 hours of continuous use.

For comparison, the same cells last about 8 hours in an AR8200.

NiMH cells will only last about 40-60% of the total discharge/charge cycles as do modern NiCad cells...which means that you need to properly care for them to achieve best life expectancy!

The Maha MC-C777 Universal Conditioner/Charger properly charges both NiMH cells and NiCad cells. It is a wise $50. purchase!

1. I currently have two nicad chargers
one is a slow charger an archer 23-134 charging at 150ma.
The other is a fast charger an infinity CC-8FC charging at 360ma/10ma and
says batteries can be left in charger.

Can I use these chargers on the NiMH batteries?

Has anyone used the internal charger in the PRO 94 to charge NiMH batteries?

Is there really a differince in NiCD and NiNH charger or is it hype to sell
you a new charger?

You must have looked at the wrong page. The MH-C777a requires NO cups or adapters to charge just about any NiCad/NiMH 4.8-to-12VDC pack you'll encounter.

It is not complicated in the slightest to adjust to all different types of packs.

For you to charge four individual NiMH cells, you'll need to either charge 'em in their holder, or purchase a three dollar AA tray from Radio Shack. You can use the ONLY add-on that made/needed for the MH-C777a - the alligator clip leads - and charge them that way.

I have been involved in batteries for several years. I will NEVER tell this group (or any other) nonsense or "marketing hype."

To achieve the greatest life from NiMH cells, you must NOT charge them with a unit designed for NiCad cells.

You can either take my word for it - which comes from study and about a century's worth of collective experience in the industry - or perform your own, independent research on the topic.

I suggest you go to the Cadex Electronics site at www.cadex.com for some excellent background material. I can also suggest reference books for you to acquire.

Clint,
I was not referring to you when I ask my question on chargers. I was just relating to marketing strategies to sell products when old products would fill the need. I don't know if you are involved in the industry or not. I am just trying to determine if I switch to NiMH batteries, will I have to buy a new set of chargers, and answers to the other question I posed.

Also does a slow charger provide longer life that fast chargers?

Thanks for the Link at cadex I will go there next.

I have and it seems to work fine. The manual states that the Pro-94 is compatible with either the regular ni-cads or the NiMH batteries, although they do recommend you charge them for 24 hours first before using ithem nitially. (See pages 11-12 for more details.) Take care.

From: LauraQ
Topic: 142 Message: 142

The PRO-94 owner's manual isn't very clear on how to listen to multiple systems. Actually, it's very easy. While in MANUAL mode, hit the TRUNK key. The display will flash. Look at the numbers along the top of the display window. These represent the banks where you have programmed trunked systems. Simply press the number keys that correspond to the banks you want to track. Then hit LIMIT SRC. That's it!

December 30,1999

1. First off,I like to say "Thanks" to all the new members.
The Board has grown,with lots of good feedback so far.
I will be sending this Update to Members By email with "Web Only" settings.
The Board Update will be posted Bi-weekly for the month of January.

2. Would recommend all members to set there settings to receive the
"Daily Digest"(or email if you prefer)so that you can help answer some of
the questions being asked.I am not RS and if they have questions,I don't
have all the answers.All response is welcome "especially" those who respond
often.

If no one posts any messages for a day,there will be No Digest for the next
day.

My personal selection(here)is to receive email,other boards I go to,
I receive the Daily Digest(its easier to delete).

3. I have "added" 3 more files to the "File" section on the Board.They are:

a)Info on the Leather Case for the PRO-94
b)Product Info on the PRO-94
c)The Month of Decembers Digests will be added
as a Monthly Zip File(adding 12-31-99)

4. There have been more "links" added to the Link section.Got any good
ones?Add them yourself(Please stick to the subject).

5. More votes have been added to the "Survey".I myself have found about
10-11 Hours to be the Max,on the AA life span.Please vote when you can.
This Survey(Battery Life)will conclude,January 15th.Any Ideas for a New one?

6. The Member List now stands Well over 100 Members.

7. Again,anyone who wants the RS Product Support Manual or the Leather
Case(Info)for the PRO-94 emailed to them,contact me at the address below.
I already sent a copy to one member as email with a "attachment".
The file(Manual)is to big to send just like a letter.They had no problem
Opening or reading it.

8. Please feel free to contact me with any wishes,concerns or ideas for this
List,Board at: pro94owners-owner@onelist.com

Have a Safe and Happy New Year,
Harry

The Li-ion is one of the most expensive commercial batteries available today. Better manufacturing techniques and the replacement of cobalt with a less expensive material will likely reduce its price by 50% in the upcoming year. Right now, it is impractical (and horribly expensive) to maintain Li-Ion packs for our scanning uses. - Clint Bradford themaddawg@... wrote: > From: themaddawg@... > > is there a such thing as a lihium ion battery in AA size???if so can they be used in scanners??? > > ---------- ONElist Sponsor ---------- > > GRAB THE GATOR! 151. Alternative Batteries

Yahoo group: pro94owners
Date: 1999-12-30 18:29:17 UTC
From: john28146@xxxxxxx.xxx
Topic: 151 Message: 151

I've had pretty good luck using the cells from toy radio control car 9.6v packs. These are available in various capacities. The best I've found is a Radio Shack product for approx. $25 and has about 1300 mAh capacity. This comes out to about $3.13 per cell.

After disassembly of the pack, the cells must be wrapped (I use a single layer of black electrical tape) and a spot of solder is applied to the + end to make the length of the cell correct. I charge in a cheepo overnight batt charger.

I've used this setup in my PRO-51 for a year now and have just started using them in the new PRO-94. Lookin' good.

Yell if you have any questions/comments.

160. fleet groups

Yahoo group: pro94owners
Date: 1999-12-31 03:49:53 UTC
From: mm.roth@xxxxxxxx.xxx.xxx
Topic: 160 Message: 160

I am a new trunktracker,long time conventional scanner.Can anyone help me figure out how to program subfleets. For example,I have the Illinois State Police District Chicago frequencies in bank 1a.Every time a unit talks,my lcd shows a 1 then three more digits like 1 122, 1 042, 1 057, 1 073, etc.What are these?I didn't put them in.Can I control these or at least understand them? How do I follow just one fleet group like north dispatch,or car-car,or gangs. Any help would be appreciated.

The numbers you are seeing when you track a trunking system represent the talkgroup ID's. Do you know what type of trunking system you're tracking? That is, is it a Motorola or EDACS system? The reason is they show their numbers in different formats.

A Motorola Type 1 system shows the numbers as three or four digits, a dash, then 2 digits. The first set of numbers is the fleet ID, the second set is the subfleet ID.

A Motorola Type 2 system shows up as a 5 digit number. This number is usually a factor of 16, that is it is evenly divisible by 16. This is the talkgroup ID. A good explanation of the Type 2 status bit can be found on page 47 of your Pro-94 owner's manual.

If you are scanning an EDACS system, the Pro-94 uses two group ID formats: Decimal and Agency-Fleet-Subfleet. If you are seeing 2 numbers, then a dash, then 3 numbers, you are in AFS mode. If it's 5 digits showing up on your display screen with the letter E flashing on your display, you are in Decimal mode. Pressing the SVC (E) key will switch back and forth between the two modes. In AFS mode, the first 2 numbers before the dash are the agency number, the first 2 numbers after the dash represent the fleet, and the last digit is the subfleet number.

To hold on any active talkgroup, just press the HOLD key and the radio will stay on the current ID. This information is on page 49 of your Pro-94 owner's manual.

Hope this helps.

Laura ,
ColaMan Here -
I reckon I'll Offer My 2 Cents Worth....
I Have Been A Scanner User For 15 Years
And It Didn't Take Me Long To Just Memorize
The Locations Of Freq Groups -
I Program My Freqs In Banks Of Cities/Counties
Because I Use My Pro 94 & 90 In My Vehicle As I Travel
So , Enter A New City/County - Lock/Unlock A New Bank
I Doubt There Is Anyone Out There Right Now
That Is Living In An Area That Has 1000 Freqs -
So On My 'A' Bank , I've Put My Local Freqs ,
& On Bank 'B' I've Put My Traveling Freqs -
For Summer Vacations Etc..
1000 Channels Ain't So Much , If You Use It With Regularity
Unless You Program & Reprogram It Often

Ditto on Excel. Of course I am no where near having them all full.
My biggest nightmare is leaving it on, having the batteries go dead, and
losing everything in memory. A whole lot of keyins. No one seems to
know how long the frequencies. will remain in memory without batteries. Has
anyone
found out, for sure?

I thought the channel assignments were stored in a non-volatile section of memory and could not be lost just by losing power. That would be pretty stupid of someone to design a radio that could become de-programmed just by leaving out the batteries!

Previously comments I have seen have said that they thought memory would be preserved for several hours.
I agree it would be stupid to design a radio that way, but it could happen.
Documentation is lacking on the subject.
I just hope that we are right. I was hoping that some with a new radio has had the experience.

in the same bank?
>Reply?to: pro94owners@onelist.com
>
>From: Dmjones2013@...
>Does anyone know if you can put two different trunking system in the
same bank.

Yes, you can, but you have to be careful about it. Two points of equal
importance. First, they must both be the same flavor of system, that is
they should both be EDACS or Motorola systems. And, if we're talking
about 2 Motorola systems, you'll probably have to make sure they are the
same Type and use the same fleetmap. Second, the coverage areas of the
2 systems should be mutually exclusive. That means that you should only
be able to receive one of the 2 systems at the same time. Otherwise, IT
WILL NOT WORK!

>I have tried but it seems to favor/monitor the Motorola sytem more than
the EDDCAS sytems.

First, it's EDACS. Second, see first point above. You can't mix two
different types, because you have to let the scanner know what type of
trunking system is in the bank. Keep in mind that the scanner will lock
on to the first control channel it finds. So, if you can receive both
control channels, the Pro-94 will only scan the system whose control
channel is first in your bank. Better yet, you've got 1000 channels and
20 banks for trunking. Why not just use one trunk system per bank!

>My kids gave me a 94 for xmas, however pulling my hair out. Also I
heard rumor that cells where going to 900 mgh this year, anyone else
heard this.

I'm assuming you mean 900 mhz, and no, I haven't heard about that. More
freqs that your scanner won't be able to receive, thanks to our
politicians!

>thanks in advance. and if you know any sites with some info on the 94,
send links (not finding much on the net)

Are you looking for info on the radio, or for some sites with
frequencies for your radio? If you want some frequency sites, here are
some locations you could try:

http://gtrac.ztn.net
http://www.trunktracker.com
http://home.att.net/~wwhitby

For some general scanning info, check out Rich Wells' site,
http://www.strongsignals.net.

Happy scanning!

From: cheshire57@xxxxxxx.xxx
Topic: 181 Message: 181

Hi all,

I'm new to this list. I just received my first new pro-94 scanner for Christmas. I'm having a tough time understanding the owner's manual. Does anyone have easier instructions on setting this up. Please forgive my ignorance, but this is all new to me. I am eager to learn! Can someone explain to me in layman's terms what trucking is???

Thanks!

Sue

Maddawg,

Please check your "links" before posting them. These(http's) take
me Nowhere? Info,YES.Garbage,NO!
As far as your other question,it was answered on January 2nd,unless you like
to leave out your Batteries,for about a week and report back to us? Buy
"extra's",get a Wall Wart. Refer to pg.4 of your Owners Manual(Memory Backup
- keeps the frequencies stored in memory for
an extended time if the PRO-94 loses power).
Will anyone take the Battery Test?

If you program in a working data channel from your area at the end of the properly programmed EDACS frequencies for the area you want to monitor, you can "fool" the scanner into thinking it is tracking a system and you will be able to enter the talkgroups. I do this all the time when I travel to program the radio ahead of time.

198. PRO-94 Memory Question Answered! Test Complete

Yahoo group: pro94owners
Date: 2000-01-05 00:01:03 UTC
From: av8tor@xxxxx.xxxxxxxxxxxxx.)
Topic: 198 Message: 198

Hello All;
Over the past few days there have been several posts regarding how-long memory will last without batteries or AC power. One person suggested TRY-IT. Ok, I did. I really didn't have too many (less then 200) freqs programmed into mine, so if I lost them, no big deal.

I removed all 4 Ni-Cads and unplugged the scanner from the AC wall adapter. I left the scanner in this condition for 20 hours. After 20 hours I put the batteries back in and ALL frequencies were still there. So, they'll last at least 20 hours. I feel it probably would have lasted "forever" as the PRO-94 probably has some form of EEPROM or FlashROM. But at least everyone can rest easy knowing that they have more than 20 hours to find a fresh set of batteries to protect their long hours of scanner programming.....

Sorry, I would have tested for more than 20 hours, but I NEEDED MY SCANNER, was having withdraw and couldn't find "the scanner patch".....

Ok, now that I've done this testing, please take a look at my scanner page.

Found a 94 under the tree , I did RTFM (14 times) maybee got the hang
of it . I live in shoreline and the trunked system lists I found seem to be
a bit out-dated , I did sort out some of it though - west side Shoreline
is 23952 which is listed as King County Transit Police on all the sites I have
found !
The strange thing is that it switches to King County North @ 3:00 am (23152)
My main Q.(s) is (are) what ID. does Shoreline Fire use , and are there missing
data
freq's in the owner's man. for King County (I seem to lose some trans.)

Thanks hunefer !!!!!!

So far I have read 2 posts about the frequencies and Talk Group Guide.
As far as the list goes for my Area,the order(LCN)RS has them listed
in is WRONG!
I would recommend checking out other sites(can be found in the 'Link'
section of this Board)to see if the Frequencies matches what the guide
has them listed as.If there not,then probably the RS order is wrong.
This has been posted back to 12/31/99 on the Calendar as a *NOTICE*.

202. TA trunk system changes

Yahoo group: pro94owners
Date: 2000-01-07 02:19:20 UTC
From: Dennis McEwan
Topic: 202 Message: 202

For those of you that follow the TA's trunked system, they're now switching to newer, smaller radios with improved functions such as a dispatcher's ability to contact a specific bus with the handheld by use of the keypad. Other functions are apparently possible as well - I'm attempting to ascertain exactly what. As I understand it, with the advent of the new HH's, there have been some changes in the talkgroups temporarily. Manhattan already got theirs, and are all on one talkgroup as a borough-wide patch. The Bronx is now getting theirs, and are also using one borough-wide patch. I believe the BX talkgroup is 11280, based on a couple of minutes worth of monitoring. Manhattan may be on 11632? - I didn't write anything down, and had very little chance to really listen. I was told by my dispatcher that they would eventually be going back to several separate patches for each borough, as they were doing before. The whole situation is apparently pretty fluid, regarding the patches. I believe I heard some activity on the old Kingsbridge 112 patch as well. I plan to investigate further and I'll pass on anything else I learn.

Yes, it's possible for a trunked system to go down, regardless of the type of system. Check to see if you're receiving a control channel (you'll know it by the annoying sound it makes.)

That is the correct cat number for the part that plugs into the wall and the tip or ADAPTAPLUG cat number is 273-1711 (H). The ADAPTAPLUG is free when you purchase the AC Adapter.

No -92 firmware updates have been released AFAIK.

> Has anyone
>discovered any bugs in the Pro-94, and if so, what are they?

Nothing reported so far. The major gripes have been with RF performance. At
the moment I am a bit irritated by the fact that the 930-940 range seems to be
solid intermod noise, whereas none of the other receivers here have trouble in
this range, including the 2052.

> Can the Pro-94
>do motorola type I II & IIi systems and EDACS? And does it have alpha tags
>(like the pro-92).

Yes.
No.

> Thanks very much again. Would anyone care to share what
>they use for an antenna on the pro-92/94?

Generally just the supplied rubber duck or the Radio Shack telescoping
antenna.

>Im assuming the Pro-94 is in fact newer than the Pro-92, and a little bit more money.

Actually, they both came out within a few weeks of each other. List price on Pro-92 is 50 bucks more than Pro-94, although the -94 was on sale during December for about a hundred off its list price. Sorry! I guess they should change the saying to: "He who hesitates, loses a hundred bucks!"

>Is there any major reason(s), other than to have the 'latest' scanner, to get a Pro-94 than a Pro-92?

Um, because you have too much money and you want to get rid of it? Just kidding! Only reasons I can think of are: 1) alpha tags, 2) instant CTCSS decoding, 3) scans LTR trunked systems, and 4) will scan trunked and conventional channels at the same time. And I wouldn't consider the Pro-94 "newer" than the Pro-92. As I said, they both came out within a few weeks of each other.

>Also, if someone has found any reviews of the Pro-94 online somewhere, please tell me.

Yeah, me too! I'd love to see a review on Strong Signals, but Rich Wells hasn't done one yet. Maybe he's just too busy with his Pro-92 and 245xlt to get around to it. C'mon, Rich! Let's see something on the -94!

So I guess the reason someone would buy a Pro-94 is if they:
a) Wanted more freqency range.
b) Wanted more channels and banks.

All I can see here is just basically cosmetics. I mean, does it perform better than the Pro-92? Can it scan trunks better? From what I hear, the alpha tags come in real handy. So are they basically the same thing, with a few minor discrepencies? Thanks so much for your help.

better?

AFAIK, the Pro-94 will track busy Motorola systems much better than the
-92 because the -94 uses the high speed control channel instead of the
low speed subaudible handshake method used by the -92. The Pro-94 is
made by Uniden, so it is more like the BC245XLT than the Pro-92 which is
made by GRE.

>From what I hear, the alpha tags come in real
>handy. So are they basically the same thing,
>with a few minor discrepencies?

The same thing? Yeah, they're both scanner radios that will track
trunked systems, but I feel that the similarity ends there. The Pro-94
is made for Radio Shack by Uniden and contains similar electronics with
the Uniden BC245XLT. This is a radio that has received rave reviews by
users and the media. The Pro-92 is made by GRE and it's is their first
foray into the trunking radio field. I think the Pro-94 is much better
at tracking Motorola systems because it uses the control channel data
and so it follows busy systems much, much better than the -92. My
wishes for the Pro-94 is that you could track both A and B banks of
channels at the same time (that is, all 1000 channels, not just 500 at a
time), and that you could track trunking and conventional channels at
the same time, just like the 245xlt does. Other than that, I'm very
happy with my -94.

>Can the Pro-94 do all of this (and more?
>please share): Motorola/Ericsson/LTR
>tracking, SAME Wx, CTCSS/DCS, cloning,
>attenuator?

Motorola, yes.
Ericsson, yes.
LTR, no.
SAME Wx, yes.
CTCSS/DCS, no.
Cloning, unfortunately no.
Attenuator, again, unfortunately no.

My advice, if you're in a large city with several busy Motorola systems, get the Pro-94 or the 245xlt. If you live in an area with an LTR trunked system (BTW, they are not very common) and you must track them, get the Pro-92. If you've got small, not too busy, Motorola systems, get the -92 or the 245xlt. If you want to save some money on your radio, get the 245xlt, since it is now available at many places on the web for around $200. Or, better yet, wait for the new Uniden BC780XLT base/mobile. This will be the Trunktracker 3! From what I've heard and seen, this is going to be the DREAM radio! I think it's due out this spring.

I quite agree. If I had not gotten mine on sale too, I think I would have paid the extra $50 and gotten the 92 but as it was the 94 has a lot of features my BC 60XLT was missing like AIR frequencies, the 800-900 MHz range and Trunk Tracking plus the HYPER scan and the 1,000 channels. So I am pleased. Take care and good luck scanning.

To: trunkcom@...
Subject: [TrunkCom] CES Show 2000 Quick Report

Submissions: trunkcom@...

Just got back from the Consumer Electronics Show (CES) and wanted to pass a quick report on to the List:

Last year, ICOM was supposed to be at the Show, but never showed up. This year, Winradio was included in the Exhibitor List, but I could not find them. I don't believe they showed up either. So, as usual, Uniden was the only scanner manufacturer at the Show. (Radio Shack/GRE never exhibit at CES since they pretty much have closed distribution through Radio Shack.) (Ahhh...I remember the good old days when Uniden, Regency and even Fannon had scanners on display. Fannon is still around selling megaphones.)

Uniden displayed all their current models, including the relatively new SC-200 and the clock-radio line. There's was nothing brand-new except....

The Uniden BC-780XLT was on display in mock-up form and what a great sight it was to see. The radio is known as a TRUNKTRACKER III in that it will include LTR trunking as well as Motorola and Ericsson trunking. The radio will, of course, multi-track (multiple trunk system tracking at the same time) and, like the BC-245, it will trunk and conventional scan at the same time. There will be no 5-second delay.

Here are some of the other highlighted features of the radio in no particular order:

Note: This is a mobile/base scanner. DIN-sized (approx. 7" long by 2.75" high). It includes a flip-up stand for base use.

1. Fully backlit keypad (all keys)

2. 5-line display include 2-line X 16-character alpha tag (one line channel/talkgroup and the other line for bank tag).

3. 10 banks of 50 channels each

4. Control Channel Trunking (MOT 800/900). Enter a control channel and start to trunk, even if you don't know the frequency plan. Something the competition can't do.

5. I-call capability

6. CTCSS/DCS operation

7.Signal strength meter

8. Selectable AM/FM/WFM modes

9. 25-512 continuous + 806-1300 continuous less cellular)

10. Cloning

11. SmartScanner

12. PC Control
(This radio has a DB-9 jack on the back)

13. SAME Weather Alert

14. 10 pre-programmable service searches

15. Reverse key (to instantly switch to repeater input of standard UHF/800/Ham freqs.)

16. VFO Operation

17. MENU system for easy programming

18. Beep alert on user-selected channels/talkgroups

There's even more, but since the software for this radio is still being developed and some features may not make it into final production, that's all that's being released at this time. Look for a June/July release date (although that too is subject to change).

Yes, the -94 will scan all Motorola trunking systems, including Type IIi systems. These are the so-called hybrids, because they are a mix of Type I and Type II systems. See page 55 of your manual for more information about setting up your radio for hybrid systems. Also, check out Lindsay Blanton's website for a superb discours on scanning Motorola systems. The URL is http://www.lcblanton.com/trunked.htm.

From: admin@onelist.com
Subject: Friday evening maintenance

Dear ONElist Moderator,

In order to continue to provide you with the best service possible, the ONElist Web site will be off-line for routine maintenance from Friday, January 14th at 6:00 p.m. until Saturday, January 15th at 6:00 a.m.,Pacific Standard Time.

All emails posted during that time will not be processed until Saturday, January 15th at 6:00 a.m., Pacific Standard Time. Due to the backlog which will occur, some email will not be delivered until later that morning,probably no later than 8:00 a.m.

We apologize for any inconvenience this may cause.Please inform your subscribers of this scheduled downtime.

Thank you,

The ONElist Team

233. Wall Wart & NI-MH Combo

Yahoo group: pro94owners
Date: 2000-01-13 09:09:11 UTC
From: harryp10@xxxxxxx.xxx
Topic: 233 Message: 233

The scanner has a built-in circuit that lets you recharge Ni-Cd and NI-MH batteries while they are in the scanner.To charge the batteries, set ALKALINE < JACK > NI-CD to NI-CD, install the batteries in the scanner, and connect an external AC or DC adapter to the scanner's POWER jack.

If rechargeable batteries are installed and ALKALINE < JACK > NI-CD is set to NI-CD,the adapter powers the scanner and recharges the installed batteries at the same time.

Before you use Ni-Cd or Ni-MH batteries for the first time,charge them at least 24 hours to bring them to a full charge.

Discharged batteries take about 10 to 18 hours to fully recharge.If you use the scanner while the batteries are charging,charging takes longer.
(I assume this means they charge with the scanner off)

I purchased 4AA MI-MH batteries(1300mAh)with a charger from RS.I am now using them in my scanner and a Wall Wart(AC adapter)at home.It has been 2 weeks, without any beeps from the,Battery LO(I use Batt about 4hrs a day).
It was well worth the $20(on sale,last,1).The Wall Wart,I believe is $8.95 (including the H Adaptaplug).

```
****************** PRO-94 OWNERS BOARD UPDATE ******************
January 15, 2000

o Welcome to the New Year o

The following is a Update of the past 2 weeks

1. The Calendar was added to the list Jan,1 2000.

2. Terry Brennan from the GTRAC site,has been kind enough
to add the pro94 list to his Links page. You will find a link
to his site on the'Message Trailer'of the community email
(the EDACS Guru,good Info here).

3. New links have been added to the Links section of this
Board.

4. More Files have been U/L to the Files section of this
Board.

5. For those of you who may be new to "Onelist" and wonder how
it works,Here is a brief description. Onelist is a email center,
all Lists(Boards)are the center of the community for the group
to use to send email to each other pertaining to the subject
Of the list. The pro94owners List is a email center for people
that own a PRO-94 or have questions about it. If no email is sent
for any given day,there will be no following Digest for the next
day. The day before posts will remain active until new email is
received to Onelist. All posts and replies go through Onelist.
I will try to add "Informative" posts at times when no email
has been sent.

7. The New Survey will start soon after this Update.

8. Membership has stayed right around 175.

9. Please feel free to contact me with any wishes,concerns or ideas
for this List(Board)at: pro94owners-owner@onelist.com

Moderator,
Harry

Hello,

There is a new survey for the pro94owners
community:

-------------------------------------------------------------

How informative do you find the
pro94owners list?

o None
o Some What
o Average
o Very Much So
o Excellent

-------------------------------------------------------------

To vote, please visit the following web page:

http://www.onelist.com/surveys/pro94owners

Note: Please do not reply to this message. Survey votes are
not collected via email. To vote, you must go to the ONElist
website.

Thanks!

Moderator, pro94owners
```

238. Re: New survey for pro94owners

Yahoo group: pro94owners
Date: 2000-01-16 04:50:41 UTC
From: Clint Bradford
Topic: 238 Message: 238

I sense a little "frustration," possibly, on our moderator's end...

"We" - collectively - didn't have a lot to offer in the battery survey, although there are scores of us here.

I am guilty - I didn't participate in that one myself.

But there isn't a more worthwhile "forum" for Pro94 owners than this: A group of Pro94 owners.

So...please take the fifteen or twenty seconds and vote in the most affirmative manner you can on this survey. Believe it or not, it takes time and dedication to run one of these messagegroups. And our moderator deserves all the thanks he can get.

- Clint Bradford

242. PRO-94 antennas

Yahoo group: pro94owners
Date: 2000-01-16 17:13:45 UTC
From: LauraQ
Topic: 242 Message: 242

Let's face it: though the stock antenna on the PRO-94 does the job, for longer range listening, you need something else. Best results that I've had so far is an extendable whip which can be extended or collapsed depending on the frequency band you're listening to. I've also had good results with (believe it or not) a random length of wire. Which just goes to prove that anything can pull in signals. Don't be afraid to experiment!

So, what are you using?

243. suggestion for better battery survey

Yahoo group: pro94owners
Date: 2000-01-16 18:27:38 UTC
From: tobrien@xxxxxxxxxx.xxx
Topic: 243 Message: 243

Please dont take this the wrong way, but I think a survey that breaks the battery life down by type would be more informative>
Now there are many different choices for batteries available that vary widely.

I use Ni-Cd cells; some 700mAh seem to last about 6-8 hours at moderate volume during scanning, some 1100mAh last about 10-12 hours at same conditions.

Maybe you could offer choices for alkaline, Ni-Cd/NiMh <1000mAh >1000mAh, wall wart/Dc cord? I realize this would be more difficult, but may provide more information for some people.

From: angie petersen
Topic: 245 Message: 245

It's good to know that I'm not the only one who has been known to use peices
of wire as scanner antennas. I have actually had alot of luck with "wire" antennas.
Actually-my preference is co-ax-I read about stripping co-ax to a certain length
and peeling back the surrounding wire mesh in my first radio-shack Police Scanner
book years ago- it definitely works. But then again-so does a peice of speaker
wire crazy glued onto the board and wrapped around the would-be antenna mount on an
radio shack TrunkTracker-(but thats another story).

Radio Shack has 1500mAh Ni-Mh's in stock - I use them in my PRO-94 and they
wrok great and last really long.

Re:PRO-94 antennas

Here is a message sent to the list 12/23/99.Seems Renee is quite happy with this combo she has set up. Any other comments about Discones?

Digest:13
Message:8

Date:23 Dec 1999 22:35:52 -0000
From:renee@...
Subject:Adding a Discone Base-station Antenna to the Pro-94

I recently installed a nice Discone antenna from Radio Shack witha ten foot steel mast strapped onto my chimney. What a diffence! Now, I am busy looking for frequencies in the Southern Maryland area. I'm new to this, and it's certainly a pleasure to have a pretty darned good scanner. Anyone with a comprehensive list of local frequencies is welcome to reply. Thanks!

Renee,
I have Ocean City MD's trunk system, as well as other Ocean City Freqs on my website. Also I have a complete list of Marine freqs which have details added for the Ocean City area. I'm not sure what part of South MD you're living in, but I hope to be moving to Ocean City in a few months, if you live in that area please email me at av8tor@... You can check out my freqs here at http://www.flash.net/~av8tor/radios

I too put a Discone on my PRO-94, but have had less then perfect results. I live in Lancaster, PA (the Murder Capital of Pennsylvania) and with the discone, the PRO-94 simply overloads very badly in this area. Many people think Lancaster is a quite place because we have all the "Horse and Buggy" people. Well that ISN'T the case. NOT ONE day goes by were we don't have a "shots fired" call in this city. I feel its a quite date if we only have one or two "shots fired" calls here. So as you can see I get alot of listening in this town.

Antenna gain applies to both transmitting and receiving
for the same frequency range over which the gain figure holds.

From: Renee' A. Edman
Topic: 256 Message: 256

Just make sure the switch is set, and the batteries are out...also, you could invest in Radio Shack Cat. No: 23-242 [Class II Battery Charger] Which can burst-charge even the hi-capacity NiCad batteries 4 at a time by discharging then charging, then going offline. This way, a spare set is always ready, but think in terms of also keeping a factory-sealed four-pack or better of Lithium-Ion Batteries for emergencies, where you might encounter a need for longer usage.

Renee' A. Edman

PS: A rechargeable battery can develop a memory if charged then used short-term...beware!!! Consider Nickel-Metal Hydryde!
[non-memory-affective]

Ray,

What I do is the same but when I feel the radio has had enough
charge(Ni-mH),I let it run on the Batt's for about 4 hours. Then I start
using the Wall Wart again. I believe using any Re-chargeable Batt after a
'FULL" charge,you should run the Batts all the way down till the radio shuts
it self off the 1st time using them(also recommended every so often).
Meaning for any Re-chargeable battery. The Next charge will be 'FULLER'.
Also you can always have 4 AA's(I have about 50)for a power failure event.

Topic: 259 Message: 261

Your Absolutly Right Laura .
What I Do Is Load In A City's Trunk Freqs In A Bank -
Leaving Up To 45 Empty Slots , Lock Out The Trunks ,
Then Enter That City's Conventional Freqs In The Same Bank
Thereby Making It Much Easier To Keep Track Of Who's Where
- ColaMan

The PRO-94 sports fifty channels per bank, which, for most trunked radio
systems, means that you'll have some empty channels laying around. Try
this:
enter some of your favorite conventional frequencies into the empty
channels
and then lock out the channels in that bank that have trunked frequencies.
You'll still be able to trunk track that bank, but when you want to hear
the
conventional frequencies, just switch out of trunked mode and hit SCAN.

263. Battery Saver Mode

Yahoo group: pro94owners
Date: 2000-01-21 03:37:31 UTC
From: George F.
Topic: 263 Message: 263

Does anyone know how to turn off the Battery Saver Mode while in manual? There are times I will have my PRO-94 in manual mode while there is police action in the city (a lot here in Lancaster, PA!). However it takes the scanner a few milliseconds to realize there is a signal when in battery saver mode. Ok, I know it doesn't sound like much, but when there is a chase, crime scene, or action where the police are talking fast, that few milliseconds is just enough to cut the first word or two.

Next, I really don't think the battery saver is worth that much, this is the only scanner I've had that had such a feature and the PRO-94 isn't any better on battery life then any of my other hand helds....Don't get me wrong, I really do like the PRO94 scanner....

I'd like to know if anyone knows how to read their manual? Page 37 explains it in a section titled "TURNING THE BATTERY SAVE FUNCTION OFF/ON." But, George, since it's obvious you have lost your manual, here's how to do it.

1) Turn off your scanner.
2) Hold down the PRIORITY button while you turn the scanner back on.

This is a toggle function, meaning that you do it once to turn on the battery save function, then again to turn it off.

If you are New to Scanning you need to read the Manual like(10)times.
The more you read it(plus pushin buttons on the Scanner),the better
you understand it and find things you may have overlooked.
Only(5)times,for Old Timers.
Know how to Reset the Scanner(pg.72)if the display locks up or stops.
Caution=This also Clears all Memory.

We must have different manuals. My page 37 has "TURNING THE KEYTONE OFF/ON"
information but nothing else. 2/3 of the page is blank.....

>George

George,

My page has it,here it is for you:

Turning The Battery Save Function Off/On

When the scanner is set to receive (monitor) a manually selected channel, and it is not actively scanning, using the battery save feature conserves energy.

To turn the battery save function off or back on, turn off the scanner, then hold down PRIORITY and turn on the scanner.

OFF SAVE briefly appears when battery save has been turned off.

on SAVE briefly appears when battery save has been turned on, and [S] appears.

When the battery save feature is active, the scanner repeatedly turns off the internal power for 1 second, then turns it back on for about 1/2 second to check for a transmission.

I suggest you "download" the Zipped Owners Manual here in the "Files Section" or
GoTo RS site to view it for yourself. I wonder how many other Owners are missing other Information?

This is another "Reason" not to be so hasty with our "answers"!

Harry

Hmmm, interesting! I've got the keytone on top, then the battery save info right below that. I'm wondering if you got an early version of the manual, or a bad printing. On the back cover, bottom left hand corner is the printing date. Mine is 08A99, which means 8/99. Maybe yours is earlier. Call Radio Shack and tell them you want a correct and complete manual.

??"I Wish You Could See"

I wish you could see the sadness of a business man as his livelihood goes up in flames, or that family returning home, only to find their house and belongings damaged or lost for good.

I wish you could know what it is like to search a burning bedroom for trapped children, flames rolling above your head, your palms and knees burning as you crawl, the floor sagging under your weight as the kitchen below you burns.

I wish you could comprehend a wife's horror at 3 a.m. as I check her husband of 40 years for a pulse and find none. I start CPR anyway, hoping to bring him back, knowing intuitively it is too late. But wanting his wife and family to know everything possible was done to try to save his life.

I wish you knew the unique smell of burning insulation, the taste of soot-filled mucus, the feeling of intense heat through your turnout gear, the sound of flames crackling, the eeriness of being able to see absolutely nothing in dense smoke--sensations that I've become too familiar with.

I wish you could understand how it feels to go to work in the morning after having spent most of the night, hot and soaking wet at a multiple alarm fire.

I wish you could read my mind as I respond to a building fire, "Is this a false alarm or a working fire? How is the building constructed? What hazards await me? Is anyone trapped?" Or to an EMS call, "What is wrong with the patient? Is it minor or life threatening? Is the caller really in distress or is he waiting for us with a 2x4 or a gun?"

I wish you could be in the emergency room as a doctor pronounces dead the beautiful five-year old girl that I have been trying to save during the past 25 minutes, who will never go on her first date or say the words, "I love you Mommy" again.

I wish you could know the frustration I feel in the cab of the engine or my personal vehicle, the driver with his foot pressing down hard on the pedal, my arm tugging again and again at the air horn chain, as you fail to yield the right-of-way at an intersection or in traffic. When you need us however, your first comment upon our arrival will be "It took you forever to get here!"

I wish you could know my thoughts as I help extricate a girl of teenage years from the remains of her automobile. "What if this was my sister, my girlfriend or a friend? What were her parents reaction going to be when they opened the door to find a police officer with hat in hand?"

I wish you could know how it feels to walk in the back door and greet my parents and family, not having the heart to tell them that I nearly did not come back from the last call.

I wish you could feel the hurt as people verbally and sometimes physically, abuse us or belittle what I do, or as they express their attitudes of "It will never happen to me."

I wish you could realize the physical, emotional and mental drain of missed meals, lost sleep and forgone social activities, in addition to all the tragedy my eyes have seen.

I wish you could know the brotherhood and self-satisfaction of helping save a life or preserving someone's property, or being able to be there in time of crisis, or creating order from total chaos.

I wish you could understand what it feels like to have a little boy tugging at your arm and asking, "Is Mommy okay?" Not even being able to look in his eyes without tears from your own and not knowing what to say. Or to have to hold back a long time friend who watches his buddy having rescue breathing done on him as they take him away in the ambulance. You know all along he did not have his seat belt on. A sensation that I have become too familiar with.

Unless you have lived with this kind of life, you will never truly understand or appreciate who I am, we are, or what our job really means to us...

I wish you could though.

Hi,
It's my understanding that using the priority feature during
trunking operations causes a selected "talkgroup" to become the
priority "talkgroup", and whenever that talkgroup becomes active,
it overrides and you hear the priority "talkgroup"
If I'm wrong, please someone correct me.

Harry -

1. I sincerely apologize for NOT participating in all but one of your polls.

2. I honestly DO appreciate the time and effort you have committed to this newsgroup, though.

And I think I am not alone regarding both #1 and #2 above.

I receive - on the average during weekdays - over 180 email messages. And I "tough" each one - either an immediate DELETE, a brief look THEN delete, shove some in separate folders...but I promise you that each of your messagegroup's messages are READ before saving or deleting.

That may not be enough to make you "feel" good about what you;re doing for us. But it says a lot to ME. It says that the "moderator" here is in control of a well-behaved, informative group discussing a topic that interests me.

And I cannot say that about too many of the messagegroups that I subscribe to.

So...please "stay" with us. "Lurkers" will almost always be the majority --- just don't take that to mean that we do not appreciate what we're receiving.

Au contraire, mon frere! The Pro-94 will ignore any conventional priority channels while in trunk mode, and will only pay attention to priorities in your talk group ID list. Aforementioned manual has the answer at the top of page 55... "PRIORITY TALK GROUP ID SCANNING." Quoting from the manual:

"You can assign a priority to a favorite ID so during scanning the scanner checks that ID more frequently that the others in the list. Each of the five memory locations reserved for storing lists can have only one priority ID, and the ID assigned that priority in List 1 has the highest priority of all."

All you need do to assign a priority to an ID, is to press the priority button while you are in the scan list program mode. While trunk scanning, press the PROG button, then enter the ID number (list number and location number), then press PRIORITY. The P will appear next to the talk group ID. To priority ID scan in trunked mode, just press the PRIORITY while scanning or while in manual until PRI appears on the screen. To turn the priority ID scan mode off, just press the PRIORITY button again. Also, keep in mind if the priority ID is locked out, priority ID scanning will not work!

10xRTDM!!! (If you don't know what it means, e-m me!)

I still have all intentions of running this list(Board)[pro94owners].
I don't believe 21 votes out of 183 Members is Fair to the ones
who have so far made this Board "ACTIVE".To ask of any Member
to cast a vote,one would think that's the least they could do,
for all of the "Infomation" they are getting here.
Now the Survey will be inactive until I have interest in it.
I put enough time and effort into this Board and if something's are
not useful,well then I don't need to spend my personal time on them.
I understand how NG's work very well and there care.
There are some less then desirable and sloppy(lists)by Moderator means.
I do Moderate this group each day and no email sent to the board
is not read by me at sometime of the day.So if it is a problem to
come here and cast a simple vote,just imagine what its like to run
this list.I am not crying,just want to Rattle some Cages!

I use a Headset with my PRO-94 while the wife is sleeping.
I find it much better then just using the speaker(you can
actually hear alot more with less volume).
The Headset for my PC slips into the Ear Jack with No problem.
So if you have a Headset for your PC,give it a try on the
PRO-94.You just may want to rush out and get yourself that
"Ear Plug" accessory.

>
>Dick AJ7N
>Marysville, WA

This is from the Owners Manual:

Priority Talk Group ID Scanning

You can assign a priority to a favorite ID so during scanning the scanner checks that ID more frequently than the others in the list.Each of the five memory locations reserved for storing lists(see "Using Talk Group ID Lists"on Page 52)can have only one priority ID,and the ID assigned that priority in List 1 has the highest priority of all.

To assign a priority to an ID, press PROG.Enter the desired ID number (list number and location number),then press PRIORITY (H/S).P appears.

To turn priority ID scanning on or off, repeatedly press PRIORITY (H/S)during ID scanning or manual operation.PRI appears when priority scanning is turned on.

Note:Priority ID scanning does not operate when priority IDs are locked out.See "Locking Out Talk Group IDs" on Page 50.

I am one of those that read every message. Getting info in the E-mail is easy.

I find the board very informative, but because I am new to the Pro-94 I find
that I need more information than I can give.
The surveys are helpful even without high participation. Remember many people
don't even vote.
And better 80% found this group informative without a single None vote.
Keep up the good work.
Pat

From: PJH
Topic: 284 Message: 290

Glen is right about being nicer.

I am just starting to program the Group ID lists.

1. When you trunk scan you can scan through multiple trunking banks (1-10), even though it is very slow skipping between banks, it does work.
When you are using the group ID list scanning are you limited to the ID lists of a single trunk bank or will it scan the group IDs of all the banks selected in the trunk mode?
I hope I stated this clear enough to understand. The reason is that in my are we have a RCS which has more than 50 police group IDs within the RCS. The RCS is one talk group. Many of the other police in the area have individual talk groups. To receive all police I need to scan multiple trunk banks(slow transfer between banks kill me here).

2. The Manual states that you can lock out up to 100 group IDs. Is that 100 for each trunk bank or 100 for all trunk banks in the radio; A/1-10 through B/1-10?
Problem when scanning trunk banks is I get street sweepers, Maint., Rangers, etc. I have been locking out those that are data noise and street sweepers, etc., which is why I am ask about the lockout limit.

I have two scanners that I use for trunking. A Pro-2052 hooked up to a Discone that comes in good. Then their is my Pro-94 that when i am home i hook up to a magnet-mount and a Radio Shack extension speaker and it comes in super great. Like they are in the room with me. My Discone is on a 36' pole and the Magnet-mount is just outside my window and up about 10' and comes in alot better. I can't understand it, just one of those things i guess.....

>1. When you are using the group ID list
>scanning are you limited to the ID lists of a
>single trunk bank or will it scan the group IDs
>of all the banks selected in the trunk mode?

It will scan the active group ID lists of all banks selected. Remember that you have 5 lists of 10 IDs in each talkgroup ID list, and you can turn off any one of those lists in each one of your trunked banks. So, if you only want to scan the talkgroup IDs in list 1 on one trunk bank, and the IDs in list 2 on another trunk bank, just go to the first bank, press the scan button, then press the number of the ID lists you want to turn off. Then, go to the second trunk bank and repeat. It's much more efficient if there are a lot of IDs on a system and you only want to scan a handful of them to put all the IDs you want to hear in the talkgroup ID lists, then turn off one or more of the ID lists, than it would be to lockout the individual IDs.
BTW, what is an RCS? I've never heard that term used before.

>2. The Manual states that you can lock out up
>to 100 group IDs. Is that 100 for each trunk
>bank or 100 for all trunk banks in the radio;
>A/1-10 through B/1-10?

I believe it is for each trunk bank, but I'm not sure. I usually just set up a talkgroup ID list and scan that. It's much more efficient that way.

Good luck, Pat.

Topic: 284 Message: 301

Glen,
The San Diego Regional Communications System (RCS) is a system expected to have more than 70 county and state agencies using the service. Covers the whole San Diego and Imperial county areas via use of repeaters. Contains both analog and digital. Several small cities use the RCS while the Larger cities use their own system. The RCS system cost $83.4 million. The RCS uses over 150 frequencies in the 800 MHz band. It has a separate Mobil DataTerminal (MDT) system. The North County loop has 15 frequencies and four control channels. Several agencies are using ASTRO digital. ASTRO is more private and can have 6.25 KHz spaced channels. Scanning in this area is almost as hard to learn as the PRO-94. With so many frequencies for each trunked group it is hard to track because of the delay in shifting between trunked banks. Almost makes me long for a small town again. The most active channels appear to be the EMT Ambulance channels.

307. Scanning Tips for 800 MHz

Yahoo group: pro94owners
Date: 2000-01-27 09:23:23 UTC
From: harryp10@hotmail.com
Topic: 307 Message: 307

(A Reprint)

Scanning Tips for 800 MHz

First off, you need to use a scanner with full 800 MHz coverage. Not only the full 800 MHz region itself, but the scanner must be capable of receiving the scanning steps peculiar to the 800 MHz region, such as 30 khz steps (scanning increments) or the 12.5 khz steps as well. Lesser quality receivers will not allow this. More importantly, the scanner must receive frequencies such as 856.2375 without rounding off to a higher or lower frequency such as 856.240 or 845.235...if your scanner 'rounds off' that way you will hear only a minute amount of actual 800 MHz traffic.

As with any monitoring setup you should use the highest quality materials and equipment you can afford. Always adhere to safe operating practices, particularly when setting up antennas and power cords and other electrical equipment.

Radio Shack, AOR, Uniden and other manufacturers offer excellent quality scanners and these are often offered at a discount, particularly discontinued and desk models. For quality 800 MHz operations make certain you buy a receiver with a large quantity of memory channels available. Some inexpensive receivers can be modified to receive 200 or more channels and newer receivers, particularly when modified or mated with a personal computer and appropriate software, can store several THOUSAND channels. These channels can be grouped into various operating modes and when used correctly and mated with proper recording equipment an individual can become, in effect, a low-budget 'National Security Agency".

So, when you have selected and set up your equipment, put up a good external antenna and appropriate coax cable, you are ready to listen to the 800 MHz traffic (as well as all the other frequencies in the radio spectrum if you have a
high-tech new receiver!). How do you know where to find the 800 MHz frequencies? True, it is not as easy as it was in the 'old days'...it takes some
real detective work, monitoring, recording, and putting your knowlege to work to find the active frequencies in your area. More and more police, fire, and other Public Service entities are moving up to 800 MHz for various reasons. If you're fortunate you can locate a local scanning club and get a list
of frequencies in use in your area. Try electronics stores, Amateur Radio organizations, police communications personnel, and others to find the frequencies to monitor. Or you can acquire a frequency counter and explore around and find frequencies that way, too. Often information can be found on computer bulletin boards.

If you still cannot get the information you need, do what I do...sit down and use your radio and some common sense. Let your scanner 'search' the 800 MHz frequency ranges...do this at night when most of the commercial traffic is off the air if you want police,fire,and other Public Service frequencies. You will find a number of active 'data channels' in use if there are 800 MHz trunks active in your area.These 'data channels' give off a distinctive noise.
Write down the EXACT frequency of each channel. Go through the entire 800 MHz band if you need to. At the end of your search you might have one or two in a small area or dozens(or more)in a large metro area.This little list of frequencies and some homework will give you the frequencies you need! Each trunk system has a number of channels allocated to it. At any given time at least one of those channels is used as the 'data channel'. Guess what...that frequency changes from day to day, often once every 24 hours or so. So a channel used as the data channel today might well be a different channel tomorrow. Now the good part...on any given trunk there are just so many frequencies (channels) allocated to it. These are usually just One (1) MHz apart from each other.So if you have identified a 'data channel' on, say, 815.2225 you can try assigning a memory channel to that frequency, then another at 816.2225, 817.2225, and so on, as well as 814.2225 and 813.2225. Some trunks have as few as four channels (remember one is always being used as the computer 'data channel') and some have as many as 20 channels. So now you know why you need to have such a large capacity for memory storage in your scanner (as well as a swift scan rate!). Make sure you don't invoke the 'delay' feature on your scanner. If you do you'll often miss routine traffic, since a conversation on one frequency often jumps through the frequencies as it follows its course.

In this way you can soon find the active channels in your area. Here in New Orleans, for example, certain portions of the New Orleans Police Department, as well as sections of the Jefferson Parish Sheriff's Office, have utilized 800 Mhz communications, as have the Orleans Levee District Police Department, the Harbor Police Department, the Slidell Police Department,Louisiana State Police, the New Orleans and Jefferson Parish Fire Departments, Federal law enforcement entities, and others, including civilian operations including Taxi companies, Tow-trucks, sales personnel, mechanics, air conditioner service personnel, ship chandlers, Amateur Radio operators, boating and shipping industry personnel, members of the news media, local colleges and Universities, and many others. For that reason alone (sheer numbers!) if you want Public Service frequencies it is far easier to monitor them at night when almost all of the other traffic is done for the day. A sound-activated cassette recorder is essential for recording while you're sleeping or otherwise engaged...I use a standard VCR as a recorder(remember, it can record for many hours and offers not only high-fidelity recording of audio but ease of setting recording times) and have never been unhappy with its operation.

So remember...get the best quality radio scanner you can afford and be sure it offers:

* Full 800 MHz coverage.
* Appropriate selection of 800 MHz frequency 'steps'

* LOTS of Memory Channels
* FASTEST scan rate you can find
* Deactivate the DELAY feature!

Good luck!

James Prine

308. Pro-94 Tips & Tricks??!! Anyone?

Yahoo group: pro94owners
Date: 2000-01-27 14:14:44 UTC
From: scanman@scanland.org
Topic: 308 Message: 308

Does anyone know tips and/or tricks for the Pro-94?

I have read that some new scanners have had lots of 'hidden' features found on them.

Any of these for the Pro-94 would be greatly appreciated.

309. Re: Programming Info.....

310. *Board Update*

Yahoo group: pro94owners
Date: 2000-01-29 03:53:21 UTC
From: harryp10@hotmail.com
Topic: 81 Message: 310

********** PRO-94 OWNERS BOARD UPDATE **********
January 29,2000

1. "Welcome" to all the new members.The list is just short of 11 Members
to reach a total of 200.

2. The Survey doesn't seem to have much interest.So unless someone
has something they would like surved,I am going to leave it
Inactive.

3. More Files and Links have been U/L to the File and Link sections.
You may find interest in the "Ear Bud" file. It's a Flexible Ear
receiver from Motorola(like Police and FBI wear).I purchased one and
it works Great.It is $9.99 plus Tax.The price also includes 2nd day
FedEx Air(which works very well)!
Anyone who can not view the File section of the list,here is the
Link to the Motorola website: http://www.motorola.com/
Customer Service: 800-331-6456 Mon-Fri 7:00am-7:00pm CST
(Stock #50227)

Also a good New York State ID Link was added to the Link section,for
Any of you who may live in(or visit)New York.

4. The Board Update will now be Monthly.For any Daily Info.Goto the
Monthly Calendar at:
http://www.onelist.com/calendar/pro94owners?s=2&t=946824273

5. The PRO-94 has been out almost 3 months now and would like any
Member to post there view about the 94(have you found anything
We should know about?).I am happy with mine.Most all systems here are
Trunked and I like the AA battery idea(long overdue IMO).

HAPPY SCANNING,
Harry

313. New to the lists!

Yahoo group: pro94owners
Date: 2000-01-31 01:18:43 UTC
From: Sherman Rice
Topic: 313 Message: 313

Hi al,

My name is Sherman Rice, I live in Romeo, Michigan. I've been a scanner freak for 20 years. I love my "94". I also have a PRO-90. The 94 does circles around the 90. The reception is great. I like being able to listen to more than 1 trunk group. I have 4 in my area. LAPEER Co., ROMEO FORD ENGINE PLANT, WARREN CITY, and OAKLAND Co.

I only have close to 300 channels programmed in it so far, but I can put 700 more in it. I bought it before Xmas for an early gift. I was going to sneak it in the house so my wife wouldn't blow a circuit. But I sat her down and told her it was on sale $100 off the regular price and I had to have it. I told her she could take everything she bought me for Xmas back. I want this scanner. She said she was planning on giving me a $100 gift certificate. So I got a $25 one from my sons.

Well thats all about me and my "94". Hope to learn alot about everyone else and their 94's

Take care and be safe,
Sherman

314. Pro-94 Priority Channels

Yahoo group: pro94owners
Date: 2000-01-31 13:27:29 UTC
From: Gerry Wheeler
Topic: 314 Message: 314

The Pro-94 scanner seems to have a deficiency in the way it uses priority channels. Consider the following scenario...

The scanner has a trunked system programmed (in my case it is an EDACS system). You have entered a list of group IDs you like to listen to, and one or more of them is marked as a priority channel. (This is all described in the manual on pages 53 to 55.)

Now, set the scanner in trunked mode, press the Scan button to scan your list of group IDs, press the Delay button to enable delay mode, and press the Priority button to enable the priority channels.

Here's what happens:

If the system is idle for a time, you'll see the words "Id Scan" scrolling on the display. At that time the scanner is tuned to the control channel, watching for activity on one of the group IDs you have in your list. If you look at the little dots that represent active channels, you may see activity that you're not hearing. Those transmissions belong to group IDs you don't have in your list.

When there is a transmission for an ID that is in your list, the scanner immediately tunes to the appropriate channel to listen. The display shows the group ID in use. During the transmission you'll see only two channel indicator dots: a flashing dot shows the channel you're listening to, and the other dot is the control channel. Since the scanner is not tuned to the control channel, it cannot indicate what other channels may be in use because it doesn't know.

When the transmission ends (i.e. when the sender releases the PTT button), the scanner tunes back to the control channel. The display continues to indicate the group ID you were listening to for 5 seconds (the delay period), but you can tell the scanner is on the control channel because the channel use dots show all channels that are in use.

This is where I think the priority channel operation could have been improved. While the scanner is tuned to the control channel, it *should* watch for activity on any group IDs that are marked as priority IDs in your list. If any is seen, the scanner should tune to the priority group ID immediately. However, what actually happens is that the scanner watches only for more activity on the group ID currently being displayed. Only after the 5 second delay with no activity will the scanner tune to any other group ID.

So, this brings me to my point: Has anyone found a way to get a priority group ID to "break into" a non-priority ID? It seems to me that is the whole point of marking an ID as being a priority. What mode (priority, scan, delay, etc.) do most people use for casual listening?

Sorry to be so long-winded. Thanks for any tips.

Gerry

315. Updated New Member Welcome Message.

Yahoo group: pro94owners
Date: 2000-02-01 09:10:37 UTC
From: harryp10@hotmail.com
Topic: 315 Message: 315

This Info. goes out to each New Member immediately after they join the
pro94owners list.It will also be U/L to the File section of this Board.
(Welcome txt.)

Hello,

Welcome to [pro94owners] list(Board).Please take a few moments
to review this message.

To unsubscribe from this list(Board), go to the ONElist website,at
www.onelist.com, and select the My ONElist link from the menu bar
on the left.This menu will also let you change your subscription
between digest and normal mode.
Any messages posted,will be in the following days digest
(it is the way this board works)except for people who subscribe
to e-mail messages,will recieve them by e-mail(as they are sent).
If you would like a "copy" of the Owners Manual from the RS Product
Support page,There is a 73k winzipped file,in the "File" section of
this board. To"download" it,click on files,then click on
PRO-94 Manuel.zip.It will "automatically" start to "download".
To me it seems to explain more then the one that came with the radio.
I also have "added" a Weekly Zip.File of the past week's "Posts",if you
Would like to download it to read the past weeks Digests.
Also I have My Member Profile in txt.So you have a Idea that I am a real
Person and not some Robot.
I recommend the "Daliy Digest" Option for your subscription,or you may
recieve "to many" emails and get discourage with the Board.
(you can change your "Options" at anytime)
(SEE ABOVE)
There is a Calendar for the Board.Any "posts" of interest are listed
there by Dates.There are over 40 days of Digest in the Messages(Archive)
section of this list(Located on the left hand side of your screen).
There is close to 40 "links" In the Link section of this Board(List).
(Again,Located on the left hand side of your screen).

To "post" a message,click on Messages,then click on Post.

Please Don't send any "Garbage" messages,cause then I have to
Start Moderating your Mail.
I have the ability to "Banned" anyone from the group and read
all the emails each day!I post "Board Updates" each Month to
the Board,about its progress.

About "SPAM" and ONElist

Q.
Is it possible for a "Spammer" to gather email addresses from ONElist?

A.
It is extremely difficult for spammers to gather email addresses
from our service.ONElist has built a system around the concept of
preventing bulk "harvesting" of email addresses.
There are protections in place:

1.No NonMembers-Members can access the Members area.

2.Message archives on the ONElist Web site display as
masked email addresses (for example,joe@...).

3.The Message Area(Archives Digests)is only open to Members.

4.ONElist customer support representatives have the ability
to hold moderators and members accountable for their actions.

Thanks,
Harry,List owner: pro94owners-owner@onelist.com

Eric,

ConGrats on your New 94.There is a Hard copy of a Channel List in the
'File' section of the pro94owners List at Onelist(1 zipped and
1 word format)if you would like to download it.I also could send you it as a
"attachement" in email.
As far as the Antennas.Check the January Calendar.There have been
some good 'Posts' on that Subject.Some on Cellular that are suppose to work
well in the 800+Mhz Freq. and check some back Archives.If you download the
weekly or Monthly Zip.Files,you can view the 'Posts' alot faster on your PC.

pro94owners-Owner,
Harry

I have discovered a WebSite(well set-up)that gives me the ability to create up to a 20 Questions Survey in one emailing.You have to click on the Link to get to the Survey Site.I have made a 7 question Survey on Pro94 Feed Back. The site you will be needing to Visit is 'Zoomerang'.There are comment boxes, color backgrounds with designs.You will find it quite interesting and the group would benefit from it.All results will be 'Posted' to Onelist pro94owners Community.Just as the Onelist Surveys results were 'Posted' by Me.
All Zoomerang does is send Surveys to Panelists on behalf of Members.Zoomerang sends these surveys without disclosing any personally identifiable information on its Panelists.
Please take the time to visit and take this Survey when you receive it in your email.All results are sent to Zoomerang,which I am a Member of.

Thanks,
pro94owners-owner@onelist.com

322. Re: I got my 94!

Yahoo group: pro94owners
Date: 2000-02-05 07:45:35 UTC
From: Glen Tubbesing
Topic: 317 Message: 322

Eric,
Congratulations on your new Pro-94! I hope you get many hours of enjoyment from it! Here are a few tips to help you out.

1) If you don't already have them, go back to RS and buy yourself a set of the Nickel-Metal Hydride AA batteries for the radio. DO NOT get the Ni-Cad batteries. Insist on the long-life NiMH batteries. They'll cost you a little bit more, but they'll have a longer time between charges, and they don't have the dreaded "memory" effect. In case you don't know, if you don't drain a Ni-Cad battery completely before recharging it, the battery will "remember" how low its charge is and will only drain down to that point. I bought the NiMH batteries when I got my 94 back in November and I've been happy with them. They have a capacity of 1500 milliAmp-hours, compared to 700 mAh for the Ni-Cads. That means the NiMH's will last more than twice as long between charges as the NiCads.

2) Despite what the manual says, you CAN put both conventional and trunked channels in the same bank. However, you cannot scan both the conventional and trunked channels at the same time. Here's how you do it:
a) Program the trunked system in the bank
first, just like you normally would.
b) Then, press the trunk button to exit trunk
mode, enter the number of the first channel
in the trunk bank using the keypad, press
the manual key, and LOCKOUT all the
trunked frequencies.
c) Now, program the conventional
frequencies in the rest of the channels in the
bank.
That's it! No more blank, wasted channels on your scanner.

3) It's a good idea to make a record of what frequencies you have programmed into your radio. If you have one, use a spreadsheet program like Excel to make a list of channels, frequencies, agencies, and also talkgroups for the trunk scan lists in your radio. If something catastrophic should happen to your radio, you'll have some form of a backup.

4) Always check the web for interesting sites with tips and tricks about scanning. One of my favorites is Rich Wells' Strong Signals web site at http://www.strongsignals.net/, but keep your eyes open for any others, especially sites that have frequency lists for your area, or an area you will be visiting.

That should help get you started.

Happy Scanning!

From: Glen Tubbesing
Topic: 317 Message: 323

Eric,
I almost forgot to tell you about antennas! Go to any amateur radio supply shop in your area for a good antenna. Or, check in a national magazine, such as Monitoring Times, for ads from national supply shops. Basically, any antenna designed for multi-band use should improve your reception on your -94. I have a Diamond RH-77CA and a Pryme RD-98 that I use on both my scanner and my dual band HT. I highly recommend the Diamond, but any good antenna with high gain (the RH-77CA has 6dB gain) should help you. Both these antennas are 15-17" long, so if you want something less conspicuous you'll have to check with the supply shop. Other good brand names include Comet and Larsen.

Hope this helps you out.

Q7. Is there anything you would like to tell pro94owners group about The PRO-94
that was not already asked in the survey? Please type answer in space
provided below.

1. I find the scanner difficult to use due to the sheer complexity of the command
structure. No, I
don't know how to make it easier except to say that their should be a button for each thing
you
want to do and that button should accomplish as many steps as possible toward getting you
where you want to be. There appear to be simply too many steps to accomplish even simple
tasks with this scanner. Perhaps that is the price of being so rich in features.

2. The power saver function (useless).
NIMH Battery's I use this radio constantly
at home it is pluged in by my computer to a
9volt power supply I listen to it constantly
and I take it to work to listen in the car and at work as time permitts I don't know if
this charges when it power is turned off but
it has not died for power since I bought it.
so I figure my 4-5 hours of scanning on battery and having it pluged in when at home
makes for good scanning.

3. No offense, but some of the questions are constructed in such a fashion as to be
difficult or
impossible to accurately answer. I use my Pro-94 every other day or so. There's no option
close
to that in question 2. There are too many factors to consider when comparing scanners to
compress them into a single question (your question 4). Perhaps ten different questions on
major factors when considering scanners? Say, frequency coverage, sensitivity,
programmability, ease of use, size, battery life, etc. etc. etc. As far as recommending the
Pro-94 to others (your question 6), I might depending upon their needs and whether I though
the
Pro-94 would satisfy them. I know several people to whom I might recommend it and several
to
whom I would not.

4. If you do not want to take this or other surveys, please click "reply" and
ask the survey sender to remove you from the email list.

5. Until The release of The New Uniden BC780
And ANY NEW Digital Scanners , This Is One Of The Best For It's Price You Can Buy

6. while the list has not been active of late, it is a great resource. Thanks Harry!

7. Too hard to operate while moving,kinda like dialing a cell phone.needs contour buttons to
change banks for the feel.

329. PRO-94 tricks

Yahoo group: pro94owners

From: LauraQ
Topic: 329 Message: 329

Did you know that, while in trunked mode, if you press the "down arrow" key the display will flash the frequency that the control channel is using?

If you press the "down arrow" key while a talkgroup is active, the display will flash the frequency the system is using for the group.

And, Laura, did you know that if you press and hold the down arrow key until you hear the beep, the ID and the frequency will alternately appear on the display, and stay there until you press the down arrow again. See page 48 of the manual.

"This is the age
Of the half-read page.
And the quick hash
And the mad dash.
The bright night
With the nerves tight.
The plane hop
With the brief stop.
The lamp tan
In a short span.
The Big Shot
In a good spot.
And the brain strain
The heart pain.
And the cat naps
Till the spring snaps --
And the fun's done!"

Sound familiar? But wait -- this poem was actually published in
The Saturday Evening Post in 1949, under the title, "Time of the
Mad Atom." Seems that people were as rushed then as they are now!

From: Sherman Rice
Topic: 336 Message: 336

Hi all,

I found a way to make my Pro-94 and other scanners louder. Thanks to a friend thats is a retired Detroit police officer that does some radio repair on the side to keep himself out of trouble. (HA!)

It's a MINI AUDIO AMPLIFIER from RADIO SHACK (cat. # 277-1008) It works great while in the car, at work, (if you work in a loud shop like I do) or outside in yard. It has a built-in speaker, 1/8 earphone , input , and AC adapter jacks on the left side. On the right side it has the volume control. It's 3 3/8" high, about 2" thick, and 2 3/4 wide. It needs only a 9V battery and it lasts a long time. I've left it on without the scanner in use a few times and still loud and clear as ever. You just have to adjust either the amp or scanner to get the clear sounding volume .

HAPPY SCANNING ALL!!!

Take care and be safe,
Sherman

Maybe just a "general scanner use" survey...Questions like: 1. How often do you find yourself monitoring daily, on the average? One hour per day, 2-3,4-5,more than 5. 2. Where do you monitor most of the time? Home, office, home office, vehicle, OTHER - Please elaborate if OTHER. 3. When do you monitor? Mostly mornings, mostly afternoons, mostly evenings, graveyard, OTHER. 4. When monitoring, what power source do you usually use? Internal AA alkaline cells, internal NiCads, internal NiMH, DC car cord, AC adapter. 5. Do you use an external speaker when monitoring? Yes - of YES, please describe, sometimes, nope 6. Do you use a earpiece or headset when monitoring? Nope, Yes - if YES, please describe. 7. What do you find yourself regularly listening to? Law enforcement, military, local fire department(s), amateur bands, aircraft bands, local government, federal government, OTHER - please describe. 8. Have you ever taken your scanner to one of the following to monitor? Amusement park, sporting event, concert, public gathering. 9. Anything you would like to add? - Clint harryp10@... wrote: > From: harryp10@... > > Any Ideas for a New Survey? > With Zoomerang I could do a really "Good" Battery Life one > (Even though us 'Experts' know Nimh are Best). > > Owner@onelist, > Harry > > ---------- ONElist Sponsor ---------- > > Want To Be Showered With Kisses? > Visit eGroups Valentine Gift Guide > Click Here (http://clickme.onelist.com/ad/SparksValentine9) > > ---------- > > ********** > Recommended site addresses: > Strong Signals: http://www.strongsignals.net > EDACS Guide: http://gtrac.ztn.net/

I have decided - by my personal experience - that one gets what they pay for in quality earpieces.

I have used my Otto earpiece at an event that lasted over 18 hours. Absolutely comfortable. When I took it off after the event, there was no weird 'residual' feel.

I have two Otto earpieces in two configurations. I use one a lot more than the other - and all I have ever needed was a replacement eartip. I have also used their 23db noise reducing eartip at a local NASCAR auto race. Again - they are great.

Four years of service from a quality earpiece to me is an excellent investment.

- Clint

356. Digital Scanners Update.

Yahoo group: pro94owners
Date: 2000-02-11 18:46:42 UTC
From: harryp10@hotmail.com
Topic: 356 Message: 356

February 11,2000:

(Feel free to copy and post this on other reflectors/web sites etc.)

As a reporter I have been involved in research for the last two months concerning Pa's plan for it's state wide digital 800 mhz system. It uses APCO standards and should be on the air this time next year. 22 Commonwealth agencies will use the system.
The following is my opinion and NOT the opinion of my employer. I am simply posting this as a form of information:

MA/Com the contractor for the system has decided to design and market digital scanners. According to a spokesman for the company and the project manager for the state: It was decided to make the move after receiving complaints from firefighters and other emergency personnel. They would either have to buy MA/COM radios,which have an average price of $2,000 each or be "locked out" because as we all know analog scanners will not demodulate digital transmissions.
According to the spokesman this receiver WILL be offered for sale to the general public. The state and the contractor believe that any sensitive comms can still be encrypted via DES. The receiver will be field programmable,will automatically find the talkgroups BUT is only compatible with Pa's system. It will not have the capability to track other 800 mhz systems using other formats.

The cost? According to the company spokesman 400-500 dollars. Of course whats interesting is that MA/COM has found another source of revenue with from the sale of the receivers. There is nothing wrong with that--It IS the American way!The cost of building the electronic backbone for the system has risen from 179 to 221 million and that doesn't include at least another 19 million to buy the radios.

It also brings up speculation that this will begin driving the other scanner manufacturers to begin selling digital receivers.
It may be a good idea to pass this on to the scanner manufacturers.

More info on Pa's plan and MA/COM can be found at the following sites.

http://www.state.pa.us/PA_Exec/Administration/radio-project/index.html

Here are the results and comments of the pro94owners survey.
38 people took part and more would have if webtv supported Frames.
The New Survey has been Launched('General Scanner Use')and you can vote at:
http://www.zoomerang.com/recipient/survey-intro.zgi?ID=EL4VE546LFME&PIN=RWMH8R8640BY
This URL will also be on the message trailer of the community email(for now).
Feel free to 'post' any feedback comments!

Q7.
Is there anything you would like to tell pro94owners group about The PRO-94
that was not already asked in the survey? Please type answer in space
provided below.

1.
I find the scanner difficult to use due to the sheer complexity of the command structure. No, I
don't know how to make it easier except to say that their should be a button for each thing you
want to do and that button should accomplish as many steps as possible toward getting you
where you want to be. There appear to be simply too many steps to accomplish even simple
tasks with this scanner. Perhaps that is the price of being so rich in features.
2.
The power saver function (useless).
NIMH Battery's I use this radio constantly
at home it is pluged in by my computer to a
9volt power supply I listen to it constantly
and I take it to work to listen in the car and at work as time permitts I don't know if
this charges when it power is turned off but
it has not died for power since I bought it.
so I figure my 4-5 hours of scanning on battery and having it pluged in when at home
makes for good scanning.
3.
No offense, but some of the questions are constructed in such a fashion as to be difficult or
impossible to accurately answer. I use my Pro-94 every other day or so. There's no option close
to that in question 2. There are too many factors to consider when comparing scanners to
compress them into a single question (your question 4). Perhaps ten different questions on
major factors when considering scanners? Say, frequency coverage, sensitivity,
programmability, ease of use, size, battery life, etc. etc. etc. As far as recommending the
Pro-94 to others (your question 6), I might depending upon their needs and whether I though the
Pro-94 would satisfy them. I know several people to whom I might recommend it and several to
whom I would not.

4.
If you do not want to take this or other surveys, please click "reply" and
ask the survey sender to remove you from the email list.
5.
Until The release of The New Uniden BC780
And ANY NEW Digital Scanners , This Is One Of The Best For It's Price You Can Buy
6.
while the list has not been active of late, it is a great resource. Thanks Harry!
7.
Too hard to operate while moving,kinda like dialing a cell phone.needs contour buttons to
change banks for the feel.
8.
Would like to have the light on all the time if using external power source. Also would
like to
scan trunks and conventional freqs at same time. Guess next upgrade corrects.
9.
lowsy reception and not enough "bells & whistles."
10.
The ability to set up scan groups for id-numbers within trunk systems was a selling point.

Also, direct frequency entry is a little tricky... it must be done as a manual(direct) scan
with the
squelch open - but usable.
11.
I like that it can use regular AA batteries but it needs a computer interface.
12.
Just wish it could scan conventional and trunked systems simultaneously.
13.
Display screen is small. Would like a PC programming interface. Speaker is rather weak.
Features are good, intermod rejection is about average, could be better. Trunk tracking is
very
good.

> MANUAL????

(Please turn off your caps lock key. Inserting the occasional period to mark the end of a sentence would be useful too.)

The Pro-94 will run a limited search, like most other scanners.

You have to start with trunking mode turned off, so if you're following a trunked system, press the Trunk button to turn it off.

Once in conventional mode, press Prog, then Limit. At the left of the display you'll see "Lo". That means you're about to set the frequency for the low end of the search. Enter a frequency as usual. Then press Limit again. At the left of the display you'll see "Hi". That
means you're about to set the high frequency for your search. Enter it as before.

Once you have the lower and upper limit set, press either the up-arrow or down-arrow to start
the search. If you hear something you like, press Hold. While searching, the Data button will
turn on/off the data skip mode, and the Delay button will turn on/off the delay mode. You can
lock out frequencies you don't like with the L-Out button.

I presume most people use their Pro-94's for following trunked systems, but it is also a very
good scanner in conventional mode.

Gerry

365. 400Mhz military trunking

Yahoo group: pro94owners
Date: 2000-02-15 01:02:37 UTC
From: daveygravy@mindspring.com
Topic: 365 Message: 365

Does anyone know how to properly track a UHF Motorola Gov. trunked system?
The manual isn't to clear on this and I have tried to program the offsets only to have the Pro-94 return to scanning mode.
Do you program the base first or the offset first? then after you finished with one channel how do you advance to the next? Can anyone help?

366. RE: 400Mhz military trunking

Yahoo group: pro94owners
Date: 2000-02-15 09:29:26 UTC
From: Dick Sudbury
Topic: 365 Message: 366

Hi Davey, I just figured this out tonight, by comparing three different users manuals from three different scanners. The BC245XLT was the clearest, and that's where I got the clue that I needed. First, on page 61 of the PRO94 owners manual, follow the first 3 steps, this designates the bank as your military trunked bank. After step three, program all the frequencies for the system. Then go back to step 4 and continue to step 7. This tells the scanner the base freq and the offset. Then press "src". And your on your way! At least it worked for me. Your mileage may vary. Good luck and have fun, Dick AJ7N Marysville, WA > -----Original Message----- > From: daveygravy@... 371. EDACS Group ID Display Format

Yahoo group: pro94owners
Date: 2000-02-18 18:49:43 UTC
From: Gerry Wheeler
Topic: 371 Message: 371

An EDACS Trunk Group ID is 11 bits. It can be deciphered as Agency, Fleet, and Subfleet. The number of bits given to each of A, F, or S (in the EDACS system) can be configured. For example, our local EDACS system uses three bits for the agency, four bits for the fleet, and four bits for the subfleet.

The display on the Pro-94 can show the group ID in two ways -- in AFS mode or in decimal mode. When it shows AFS mode, it assumes the group ID is four bits for the Agency, four bits for the Fleet, and three bits for the Subfleet.

Is there a way to change the display on the Pro-94? I'd like its display to match the local system. Is the 4/4/3 decoding built into the radio? Or did it somehow figure that out from the data from the radio system? (And if so, why does it seem to be incorrect?)

375. ONElist_Moderators Update

Yahoo group: pro94owners
Date: 2000-02-21 17:29:04 UTC
From: Harry P
Topic: 375 Message: 375

Dear ONElist Moderator,

I'm happy to announce significant improvements to the ONElist service. The new service provides faster email delivery and easier-to-use Web features.

A few months ago, ONElist merged with eGroups to create the leading free email group service. Since then, we've been busy integrating the two services, and along the way we've received valuable feedback from you. Above everything, you asked us to focus on performance, reliability and ease-of-use. We listened.

The integrated service is available today for ONElist members, and will be rolled out to eGroups members in the next 60 days. It features dozens of enhancements to make managing your groups even easier. Major improvements include faster performance, new message archive, privacy controls, and other new features like real-time chat. Best of all, it is absolutely free to you and your members.

We invite you to check out the new service now at:
http://www.ONElist.com

Here are a few highlights:

- FASTER PERFORMANCE AND MORE STORAGE SPACE
The improved site is now faster and more responsive.

- IMPROVED MESSAGE ARCHIVES
Now you can browse, view, and search for individual email messages (and not just the 25 at-a-time digests stored at the old ONElist service). If you're familiar with message boards on other sites, then you're bound to like our new design. Note: it may take a week or two for some groups to get the new Message Archive feature.

- CHAT
Another great way to communicate, chat lets you meet in real time with members of your group. Every group now has a private chatroom.

Michael Klein
CEO, eGroups Inc.

P.S. Check out the new service today at:
http://www.ONElist.com

********** PRO-94 OWNERS LIST UPDATE **********
February 27,2000

*Welcome to the New Members. The list now has over 200 members.

*To the new comers,make sure you check out the file and link sections
Of the list.

*Mike Burgess has join me as a Moderator for the
pro94owners list.

*Onelist-e groups has a new look to the site and has added some
new features. The Chat room(to be used for general scanner chat)
will be open. It works off a Java Applet.

*The Zoomerang survey site,is a new free survey site and for those of
you who have taken it,it is quite good. A lot of choices. The survey
has been extended and will end without further notice. The results
will be posted.

*The file section of the list has been put into folders.

*The March Calendar URL will be Posted.

*Check out Scannersway http://www.ScannerWay.8m.com
Some interesting Info.

Happy Scanning,
Harry

380. Onelist Update!

Yahoo group: pro94owners
Date: 2000-03-06 06:48:00 UTC
From: Harry P
Topic: 380 Message: 380

The Message Archive is now working. The list will be Unmoderated.
The messages should be asked and replied to in a friendly manner
(any "SHOUTING" or plain nastiness will Band any member).
You can type in any message# you would like to view(1-379)and they
will show-up by the page with all the subjects highlighted.
This also will eliminate the use of the Calendar section of this list.
The Message may also post,within a few minutes(not sure about this
yet).

pro94owners-owner,
Harry

It may lack some features but i have had only one problem with mine. When it say's you can lock out 100 talk group IDs, it only locked out 48 same as my 2052. Besides that it trunks EDACs great, the only trunk system in my area. When i use it as a conventional scanner, it works like a top. For me its been a real good scanner.

I too have the PRO-94 and love it. It handles EDACS trunk that others don't. The only thing I wish it did was MilAir!!! But the PRO-2052 does both trunk and Mil-Air and you know what I'm buying in a few days!

As far as Alpha, I had one scanner with it (BC9000XLT) and hated it! I'd rather see the frequency and/or talk-group number. I really don't care for a computer interface, its a hand-held scanner, who carries a computer in their car most of the time? ctcss, I haven't had much use for that either.....

Just my thoughts....

Wait... don't get the 2052 just yet... let's wait for the summer when the new BC-780XLT Trunk Tracker 3 comes out...

Thanks,

Glen Tubbesing

I too have the PRO-94 and love it. It handles EDACS trunk that others don't. The only thing I wish it did was MilAir!!! But the PRO-2052 does both trunk and Mil-Air and you know what I'm buying in a few days!

As far as Alpha, I had one scanner with it (BC9000XLT) and hated it! I'd rather see the frequency and/or talk-group number. I really don't care for a computer interface, its a hand-held scanner, who carries a computer in their car most of the time? ctcss, I haven't had much use for that either.....

Just my thoughts....

I've had a Bearcat once (the BC9000XLT) and what a piece of $#$%$#hit it was!! NEVER AGAIN will I buy a BearCat! It has super poor audio (very bassy), sensitivity was about 1/2 that of my PRO-2035, Cell Images out the rear end making searching the Mil-Air band useless! (70% of my monitoring is Mil-Air), and selectivity was poor in the Marine Band (do alot of Marine Band monitoring while at the beach house!). Over the last 15 years I've owned a lot of scanners and the 9000XLT was the BIGGEST disappointment!

Topic: 381 Message: 388

George,
I hate to ruin your hate-hate relationship with Bearcat, but all the Bearcat scanners are made by Uniden, the same company that made the Pro-90, Pro-94, and Pro-2052 for Radio Shack. From what I've seen of the new 780, this looks like it will be a superb scanner... just about everything you'd want a scanner to do. Check out Rich Wells' Strong Signals site at http://www.strongsignals.net for info on the BC-780XLT... he's got a sneak preview of the features of this scanner.

73,

Glen Tubbesing

The best bearcat scanner that I've ever owned was a BC760xlt. the reception on it was fantastic. When I am in my car, I can pick signals up better than in my house with my outdoor antenna. :)

From: av8tor@flash.net
Topic: 381 Message: 390

Ya know your not the only person to tell me the same thing. However I do have a PRO-94 and it has much better audio than the BC9000, Better sensitivity and far better selectevitiy than the BC9000. That BC9000 just left one heck of a bad taste in my mouth.
I've had many of the "RadioShack" scanners and all were much better than the BC9000 was.

The "General Scanner Use" Survey has ended and here are the results.
I am waiting for Zoomerang to make available the results(list)
to all of the people that have voted to view. Until that time,
the survey will idle.

To those of you who answered question number 6 with a "NO". Take my advice
and order the Ear Bud(can be found in the file section of
the list)$10 including FedEx shipping(cheap and very useful).
You will Thank me for it!!!

Harry

I have not seen any for the Pro-94, but I have seen a few mods for the
BC245 at:

www.strongsignals.net/

They include audio tailoring and discriminator output..
I know the BC245 is not the Pro-94.. but it is a very close cousin, and
the information might give one or two Pro-94 users some useful ideas..

From: Mark
Topic: 395 Message: 395

I've been searching for ID's on a few systems lately and
sometimes I hear one but don't see an ID number. Seems to be on the
Motorola II systems. I have the delay on so I have plenty of time to
look when I hear one.
Anyone else have this problem or know why this is?

Michele,
I think the best place to go to get answers to your questions is Rich Wells' excellent Strong Signals site. The address is http://www.strongsignals.net. Go to the FAQ page for answers to a lot of your questions. Also, a very important step to understanding your scanner involves 4 letters... RTFM. Read The Full Manual.

Michele,

You will need to read the Owners Manual several times and press alot of key pads,for it all to sink in. Alot of us had to and still are. Also e-mail Ray Schoonmaker at:

http://community.webtv.net/rks-57/UlsterAndOrange

He is doing well with his(pro94)and lives in your area! The following is taken from the Owners Manual(page 52).

Using Talk Group ID Lists

When you program trunked frequencies into a bank (see "Storing Trunked Frequencies" above), your scanner sets up 5 scan lists for that one bank in which you can store your favorite IDs. Each list can contain up to 10 IDs, for a total of 50 IDs for each trunk scanning bank. If you use all the banks as trunking banks, you can store 1000 IDs.

Talk group ID lists help you to organize trunking system users into categories. For example, you might use List 1 for police IDs, List 2 for fire department IDs, List 3 for emergency medical service IDs, and so on. Once you store all the IDs in a list, you can scan them just as you scan conventional channels. You can program IDs into talk group ID lists manually, during a search, or automatically.

Manually Storing Talk Group IDs in Talk Group ID Lists

1. Select the trunking bank you want to use (see "Scanning a Trunked Bank" above).

2. After the scanner begins trunk scanning, press MAN. A number showing the current talk group ID list appears at the top of the display, and bars appear that show activity in other banks.

3. Press MAN again, then repeatedly press /\ or \/ to select the talk group ID list location (shown at the top of the display) where you want to store an ID. Then press PROG.

4. Enter the type of ID you want to store, then press E.

To enter a Type I ID, use the number keys to enter the block number and the fleet number, then press (.). Enter the subfleet number and

press E.

To enter a EDACS ID, use the number keys to enter the agency number, then press (.). Next, enter the fleet number and the subfleet number, then press E.

Note: To clear a mistake while entering an ID, press 0 then E, then start over at Step 1.

5. Repeatedly press PROG or /\ to select the next scan list location you want to program. Then repeat Step 4 to enter another ID.

6. When you finish, press E to store the entries.

Moving Talk Group IDs to Talk Group ID Lists

1. Press MAN. MAN appears.

2. Select the ID scan list location where you want to store the IDs, then press PROG. PGM appears.

3. Press MON/CLR. A monitor ID appears.

4. Press E. The scanner stores the IDs into the selected ID scan list.

Scanning the Talk Group ID Lists

Press SCAN to begin scanning the lists you have stored.

Note: If one or more of the IDs you stored are incorrect, Error flashes twice and the scanner beeps several times, then the scan list numbers appear at the top of the display. To correct the entry, delete at least one of the incorrect IDs (see "Deleting a Stored Talk Group ID List" below).

To remove a scan list from active scanning, use the number keys to enter the scan list's number. The scan list number turns off, and the IDs in that list are not scanned.

Note: One of the five scan lists must always be active. You cannot remove all of them.

To restore a scan list to active scanning, use the number keys to enter the number of the list again.

Press SRC to return to the previously selected function.

Deleting a Stored Talk Group ID List

1. Press PROG. PGM appears.

2. Repeatedly press /\ or \/ to select the talk group ID list location (shown at the top of the display) you want to delete.

3. Press O then E.

From: Glen Tubbesing
Topic: 401 Message: 401

I just want to let you all know that I now have my scanner on the internet. I am running the police bank of my Pro-90 using the Destiny Media Broadcaster to broadcast on the net. If you want to listen, you'll need to download their player at http://www.radiodestiny.com and click on the "Download to Listen" button. By the way, those of you interested in putting your own scanner on the net, Destiny's broadcaster is a very simple program to use, and it's free! All you need is a sound card with line inputs. I put everything together after going down to my local Radio Shack and buying a $6 cord to plug my scanner into the sound card. Why not check it out?

Oh, I almost forgot to mention the name to look for... I call it "Battle Station Las Vegas" and you'll find it in the Radio Destiny Directory at http://www.stationdirectory.com under Information/Scanners. So, as you can see, they've already got a category blocked off for those of us with scanners! One note, though, the program works best if you have a continuous high speed internet connection, such as a cable modem or DSL service.

No problem, Clint... I would say that about 50 percent of the traffic on the scanner is from the Las Vegas Metropolitan Police Department. I also have frequencies programmed for the Henderson Police, Boulder City Police, Nevada Highway Patrol, and the Lake Mead Park Rangers.

NHP is the only organization here that uses 10-codes. The primary code I listen for is a 10-50, the code for a traffic accident. Metro has a code system, but they don't use the 10-codes. A fairly accurate list of Metro's 400 codes can be found at http://benham.net/scanner/index.html.

Please, e-mail me and let me know how the signal sounds and what you think of the setup.

410. New Owner - Please Help with a Few Questions

Yahoo group: pro94owners
Date: 2000-04-03 16:31:25 UTC
From: Vic Gonzalez
Topic: 410 Message: 410

1) Do police departments mind if asked what frequencies they broadcast in. I have searched and searced for the camach village police department in Little Rock, AR and cannot find anybody or any site that knows the answer.

2) While doing some scanning, I have run across what seems to be telephone conversations. I believe these may be the 900 mhz phones but I am not sure. They are in the 900's. Is it illegal to recieve these? Is it illegal to listen to these convesations? I have read conflicting arguments and want to be lawfull about it.

3) Are there any other types of calls that are illegal to recieve and if so what are they. Why if they are illegal can I recieve them.

4) I have an off the rack pro 94. Can they be enhanced? Can I add an antenna for more reception?

5) What are these modifications that I read about on these scanners. What is the purpose and where can they be done?

6) Where can I learn more about these scanners. The seem to be quite complicated. I have spent hours and get virtually nothing coming in.

7) Any other advise or hints for a novice would be greatly appreciated.

Nut

Yahoo group: pro94owners
Date: 2000-04-03 20:10:07 UTC
From: Glen Tubbesing
Topic: 410 Message: 413

Vic...

1 - Depends on your police department. If you're on good terms with someone there, ask him. Or, call their headquarters and ask for the radio department supervisor. Never hurts to try. The worst they can do is tell you no... or so I've been told... ;-) See answer 6 for info about some websites with frequency info.

2 - Yes, some 900mhz phones can be picked up on your radio. And yes, as I understand it, it is illegal to listen to these conversations. The big no-no, AFAIK, is telling someone else about what you heard. It's okay to listen, just don't talk about it. That's the safe way around it.

3 - Cellular phones are totally taboo. Scanners today can't pick them up, only older models or foreign units can.

4 - I'm not sure what you mean by "enhancing" the radio. However, you can add a better antenna to improve reception. Any antenna with a BNC connection will work, and if it doesn't have a BNC, it's easy to modify an antenna by adding an adapter.

5 - Most of the modifications you are reading about enable a scanner user to hook up his radio to a computer and decode the digital data in a control channel for programs such as Trunker and E-Trunker. I haven't seen any modifications yet for the Pro-94.

6 - Sounds like the main problem is that you don't have good frequencies. Check out http://home.att.net/~wwhitby/ar.htm for some trunked systems in Arkansas, or http://www.trunktracker.com/states/ar.html. You also might find some information at http://www.fordyce.org/scanning/links1.html - AR. And for information about scanners in general, you can check out Rich Wells' Strong Signals page at http://www.strongsignals.net/home.htm for a lot of great information.

7 - Search the web, but more importantly, the best piece of advice I can give you is:

RTFM - Read The Freakin' Manual

Then, when you've finished reading it, read it again. Sometimes, you come up with new insight after playing around with the radio for a bit, then going back to the manual.

Good luck and Happy Scanning!

Subject: [pro94owners] New Owner - Please Help with a Few Questions

1) Do police departments mind if asked what frequencies they broadcast in. I have searched and searced for the camach village police department in Little Rock, AR and cannot find anybody or any site that knows the answer.

2) While doing some scanning, I have run across what seems to be telephone conversations. I believe these may be the 900 mhz phones but I am not sure. They are in the 900's. Is it illegal to recieve these? Is it illegal to listen to these convesations? I have read conflicting arguments and want to be lawfull about it.

3) Are there any other types of calls that are illegal to recieve and if so what are they. Why if they are illegal can I recieve them.

4) I have an off the rack pro 94. Can they be enhanced? Can I add an antenna for more reception?

5) What are these modifications that I read about on these scanners. What is the purpose and where can they be done?

6) Where can I learn more about these scanners. The seem to be quite complicated. I have spent hours and get virtually nothing coming in.

7) Any other advise or hints for a novice would be greatly appreciated.

From: Glen Tubbesing
Topic: 418 Message: 418

Hi to everyone on the lists! I need some help! My boss has asked me to throw out the word that we are looking for scanning enthusiasts in certain cities to help us out. If you are a scannist in Salt Lake City, Detroit, Philadelphia, Kansas City, Milwaukee or Boston, you might be able to earn some pretty decent money, just for listening to your scanner and letting us know what's going on. The company I work for, Traffic Station, Inc., is looking for scanner enthusiasts to be traffic reporters for our nationwide internet network. We do reporting on the internet in 26 cities across the country. If you want to see our site, the address is http://trafficstation.com, then just choose any city from the drop down menu. The pay is pretty decent and all you need is your computer and your scanner. Take a look at the website and if you're interested, e-mail me.

Thanks,

Glen Tubbesing

From past experience the 94 has much better workmanship over some of the past Uniden scanners. I had owned a BC9000XLT and it was the biggest paperweight on my disk. That was my first and last "true" Uniden scanner I ever will own. Back to RadioShack for me. Sorry, that BC9000XLT left such a bad taste in my mouth I wouldn't ever buy a product which said Uniden on the front!

Anyone looking for a scanner to receive Cell Phones? Buy a BC9000XLT, unmodified there were so many cell images in the MilAir band it made MilAir monitoring useless!

>What do you find particularly exciting about the program???

Clint,

What I find interesting about this program is that I'm new to
using scanners and it's better than nothing.

I also like using Pre Com Data finder at:
http://www.perconcorp.com/scripts/foxweb.exe/procmenu?\0\FCC\SPECTRUM\SPECTRUM\SPECTRUM

Please don't hold back on better freeware that you have.
I'll be waiting for you to turn me on to something better?

Just found this list and joined up. I have two PRO-94s and am happy with both. The first one was taken away from me by my wife when she found it would track our local EDACS system. By being somewhat patient, I waited till the sale and bagged one all for me!! I am very lucky to have a wife that shares my interest in scanning!!
I am a cellular phone repairman and a radio ham. My current thing is antennas. Little pieces of antennas everywhere. Be glad to help out where I can.
A Hint: If one sees an old mobile or 'bag' cell phone at a yard sale, junk shop, etc, grab it if it has an antenna and is just a couple of bucks. The 800 mhz antennas are excellent (with an adapter) for trunk tracking. I got a motorola with bag,battery and antenna for $2.00 and have seen them for up to $4.00 at Salvation Army thrift stores. Always check those places (Salvation Army,Goodwill,etc). Gold is where you find it. 73 de Carl

Hi this is off the subject of the PRO 94, but someone asked what to do with an old Cell Phone. In my area we donate them to the YWCA, YMCA they run a home for battered women. Old phones are programmed by a local Cell Company to dial 911, no other numbers are allowed just 911, they in turn are given to women or if needed to men that are battered.

1) Has anyone every heard any activity on the FLEET CALL or AGENCY CALL talkgroups? examples are : 01-000, 02-000, 03-000,03-080 etc.. what are fleet/agency call groups used for ?

2) bc245xlt: when I put a talkgroup on manual or hold while scanning it sometimes breaks the hold and starts scanning again all by itself, is this normal or is it due to a problem with my unit?

3) NIMH battery for bc245xlt: where can I buy one and how do I charge it? uniden claims you cannot charge battery with their wall transformer.they also state using nimh instead of nicad voids warranty.

4)antennas: which is best model for rubber duckie and which is best for roof top ? prices and models would be appreciated as well as dealer name and px.

5)discriminator output: I have info for discr. output for bc245xlt and was wondering what I can monitor from the pins (mobile data terminals ?) and what extra equip do I need? thnx and 73's

Agree about the NiMH technology, but before getting too excited about Radio Shack, check http://www.thomas-distributing.com/batteries.htm for some better products and prices. I've been buying from them for over a year with excellent results -- quick delivery, competetive prices, good products.

(I have no commercial interest in thomas distributing.)

NiMH come to us at a price, though: They only last about 65% of the total charge-discharge cycles as do modern NiCads. AND they must be charged differently than NiCads. That means we need to use chargers specifically built for NiMH cells/packs.

Granting that (even though it doesn't match my experience) they can provide at
least 1.5 times the capacity per cycle compared to NiCd, meaning that the
overall life expectancy of a NiMH cell will be roughly the same as a NiCd.

However, in my experience, they actually tend to stay in service nearly twice
as long as their NiCd counterparts in the applications I use them for. And in
high-current applications such as digital cameras, there is simply nothing
presently on the market that can touch them for price/performance ratio.

> AND they must be charged differently
>than NiCads. That means we need to use chargers specifically built for NiMH
>cells/packs.

I still use plenty of NiCd cells, and I find that the newer chargers designed
to handle both types typically do a much better job of NiCd charging/con-
ditioning than the earlier simple-minded NiCd-only chargers. For instance,
they tend to know how not to cook the cells if they are left in the charger
for an extended period.

Buying a Maha charger bundled with a bunch of NexCell NiMH cells significantly
extended the useful life of the NiCd cells here. YMMV.

From: Eric Budinger
Topic: 454 Message: 454

I can't tell you the difference but I can give you a suggestion..

The first time I charged my Nmh batteries fully in the charger then put them into the radio. After about 2/3 hours of us I put my AC plug in. It powers the radio and charges the batteries at the same time. I'll be honest my scanner most of the day yesterday ran on battery power from about 0900 till 1900 without a problem. about that time I put the Ac adapter in and unplugged it at around midnight. Its stays on all night long and as of 10am it still hasn't gone with a low battery.
Hope that helps.

Since you know lots about antenna's can you suggest a new antenna for my Pro-94?

Please go to http://www.cadex.com and see how important it is to properly charge NiMH cells. They need a different algorithm, and HEAT must be taken into account to properly care for NiMH cells.

Yes. I don't believe that the 8000 knows how to handle NiMH cells (the 8200
does). Charging NiMH cells in a circuit designed (more or less) for NiCd
cells risks serious damage to the cells and to the equipment in which they are
being charged.

Topic: 454 Message: 458

Well my curiosity is up now.

My Pro 94 has a date code of 08 A 99.

When I bought it the first week of January, I got 4 1.2v 1500 mAh aa that I put in the radio.

The salesman got a tan with blue writing adapter cat. no. 273-1665 9v 300 mA and said (I know, who listens to a Rat Shack salesman) that was the proper adapter to charge the NiMh batteries in the radio.

I carry the radio to work and use it for eight to nine hours, five and six days a week. I use it at low volume and only scan priority channels but usually the radio stays charged. I put it on the adapter as soon as I get home and usually don't use it at night. The case has never been above room temperature while on the adapter.

The heck with the batteries, how can this hurt the radio?

Theo:

The static your are receiving might be coming from electronic devices around the place you are listening. The television, microwave, and other like devices operate on radio frequencies or near them. Many other things, such as your computer have a tag on them that say "Complies with Part 15 of the F.C.C. Rules and Regulations" Any of these things can cause some of the static/noise your are hearing.

Some of the others who see you note should be able to suggest other things.

Keep an ear to your scanner for you will hear lots of 'good stuff'.

Dave

461. Bouncing Email

FYI there are no bouncing members at this time.
If you let you mail box get to full and emails start bouncing back to the list. Myself or Mike will have to remove you from the list. You then will have to re-subscribe(another address is a good idea). I believe this only pertains to subscribers that have 'send' email option.

463. Priority in ID lists

Yahoo group: pro94owners
Date: 2000-04-28 02:42:33 UTC
From: Arthur Wolf
Topic: 463 Message: 463

As far as I can tell, the radio gives you no way to have no priority ID in an ID list. Am I missing something? Once you program trunked frequencies, and then go to set up scan lists, each list, 1 through 5, has the first ID in the list defaulted as priority. You can follow the instructions in the manual to designate a different ID as the priority in each list, but I would like to designate a priority ID only in list 1. A workaround would be to assign an empty ID position in lists 2 through 5 as the priority, but that reduces the total number of ID's I could enter for a bank to 46 instead of 50. Any thoughts...

Terry

464. greetings and intro

Yahoo group: pro94owners

Hi group... I just started reading this group... looks to be quite informative.
I do not have a pro94, yet anyhow. I've been a scan radio enthusiast for quite a while and currently use a Pro2052, a Pro91, and a Pro43 (which I am in the process of trying to sell if anyone is interested). I have been looking at both the Pro94 and 245XLT, and am leaning to the Pro94. I thought that reading this group would help me with my decision... and after reading the archived postings, I think it has. Anyhow... wanted to make my presence known and say hi.

I just swapped some gear with a friend and now a proud owner of the Pro-94. The only real problem I see is setting up the EDAC Frequencies. The book that comes with the rig is totally backwards and not owner friendly. So from I learned so far, is to throw the book in a storage box and let it collect dust. From there, FIRST, for EDACs is to program it for Ed. Then from there you can put in your LCN frequencies, hit TRUNK then SCAN then go into the PROG mode and set up what ever Work Group ID's you want to monitor. Heh heh. Nothing like a little hacking. :-)

I enjoy the Pro-94 and now have a superivsor into it as well. Will have a friend that will get one soon. I hope you will enjoy using yours. If you have problems with setting up the Pro-94 feel free to email the group.

Is there another way to have more than 5 lists when identifing group id's when trunking? On mine, I have list 1 for 01 sheriff, list 2 03 - Public Safety, list 3 - 08 Melbourne Police etc.,

It will only allow up to 5 listings or am I doing something wrong here. Any suggestions would be helpful.

Thanks,

From: dmcdyno@aol.com
Topic: 471 Message: 471

Hi, I would like to thank the people that sent me the E-mail message telling me that it was working!!!

Next, I need to know if there is a way that I can make it so that I can pick up all of the frequencies. There are quite a few that the scanner has blocked out.... Does anyone know of a web site, or have directions on how to "fix" it so that I can receive all of the frequencies?

ANY help is WELCOME

Thanks,

Jim

Jim,

Missing frequencies? Are you talking about the gaps in coverage listed on the sticker on the back of the Pro-94?

I know an easy way to □pick up all of the frequencies.□ Buy a Uniden BC-9000 or an AOR AR-3000AB or an Icom R-8500 or some other full coverage receiver. However, you should expect to pay big bucks for one of these radios. There is no way that I□ve heard of to modify the Pro-94 to receive any other segment of the spectrum that it cannot already receive. Besides, Jim, the Pro-94 already receives 2 bands that the vaunted BC-245xlt does not receive, that is, the 1.25 meter amateur band at 216-225 mhz, and the 23 centimeter amateur band at 1240-1300 mhz.

In looking at the FCC ID sticker on the back of my Pro-94, I see that it receives from 29-54, 108-174, 216-225, 406-512, 806-823.9375, 851-868.9875, 896.1125-956, and 1240-1300 MHz. Just to satisfy your curiosity, let□s look at what the Pro-94 does NOT receive, and what can be found on those frequency ranges.

0.10-0.53 MHz Radio navigation zzzzzzzzz
0.54-1.71 MHz for the uninitiated, that□s 540khz-1710khz the AM broadcast band, aka Medium Wave
1.72-26.965 MHz various shortwave and amateur radio bands buy a shortwave or communications receiver for best reception.
26.965-27.405 MHz CB radio breaker, breaker, good buddy gotcher ears on?
27.5-28 MHz Business bands
28-29.7 MHz 10 meter amateur band get an amateur radio license!
54-72 MHz TV channels 2-4, get a TV set
72-76 MHz Land mobile, fixed control, relay and remote control sounds boring.
76-88 MHz TV channels 5-6, see TV set from 54-72
88-108 MHz FM radio broadcast band, get your boom box out
174-216 MHz TV channels 7-13, again with the TV set
225-406 MHz Military aircraft, AM mode this might be interesting to listen to, especially if you live near an AF base
470-806 MHz UHF TV channels 14-69, probably want a TV set for this one
824-851 MHz Cellular phone frequencies, illegal to listen to in the US sorry, no can do this legally
869-896 MHz Cellular phone frequencies still illegal to monitor, privacy violations and all that stuff
952-960 MHz Multiple Addressable Systems otherwise known as PAGERS! ARGGH! YUCK!
960-1215 MHz Aero Navigation beep beep beep beep beeeeeeeeeeeeeeeeeeeeep

1215-1240 MHz GPS Satellites that□s why I bought my GPS receiver, cause I need to hear these freqs NOT!
1300-1350 MHz Aero Navigation AGAIN? Can□t those planes figure out where they are?
1350-1400 MHz US Government hmmm

So, Jim, even though it looks like there□s a lot of stuff that you□re missing, I really think the only thing missing is the military aircraft band. Now then what □missing□ frequencies are you trying to get?

By the way thanks to Rich Wells and his Strong Signals site for some of the info on the frequency bandplans.

952-960 MHz. Multiple Addressable Systems. otherwise known as PAGERS! ARGGH! YUCK!
960-1215 MHz. Aero Navigation. beep. beep. beep. beep. beeeeeeeeeeeeeeeeeeeeep
1215-1240 MHz. GPS Satellites. that's why I bought my GPS receiver, cause I need to hear these freqs. NOT!
1300-1350 MHz. Aero Navigation. AGAIN? Can't those planes figure out where they are?
1350-1400 MHz. US Government. hmmm.

So, Jim, even though it looks like there's a lot of stuff that you're missing, I really think the only thing missing is the military aircraft band. Now then. what "missing" frequencies are you trying to get?

By the way. thanks to Rich Wells and his Strong Signals site for some of the info on the frequency bandplans.

Subject: [pro94owners] "Fixing" Pro94? Need help w/ scanner

Hi, I would like to thank the people that sent me the E-mail message telling me that it was working!!!

Next, I need to know if there is a way that I can make it so that I can pick up all of the frequencies. There are quite a few that the scanner has blocked out.... Does anyone know of a web site, or have directions on how to "fix" it so that I can receive all of the frequencies?

ANY help is WELCOME

Thanks,

Jim

Well, thanks for the help and ALL of the info. But, what I was really wondering is if you knew of a way that I could open up my PRO-94 and change a setting so I can get all of the frequencies that have been locked out? So, if you know anything that could me out to get all of the frequencies could you help out?

Thanks AGAIN,

Jim

Order the service manual from Radio Shack. Study the schematics and go for it. But rest assured, you wont be able to do it. In recent years, Radio Shack has been making their products harder to tinker with and modifing them especially on some areas that are illegal to monitor. Its not worth it....

The f.c.c. has set rules for radio shack to follow when manufacturing their units such as the pro 94:
1) the unit must not be able to be altered to recieve cell phones, and if any alterations are attempted the unit will become inop. (no worky), many manufacturers such as uniden have begun to seal circuit boards with a thick layer of epoxy.
2) most units now have blocked out bands in the frimware IN THE CHIP, so unless you know how to reprogarm the chip, forget about cell monitioring.
3) I have several units which are cell capable, HOWEVER, most cell carriers are now going digital and the ones that arent digital have gone trunking, sharing 800 with 900 and 1900 band, which only allows me to hear one side of the conversation!
4) of course there is always cordless 43-49 mhz and room monitors 49-50 mhz and ship to shore marine telephone 161-162 mhz oh yeah 900 cordless too.

hope this sheds some light into the dark world of cell monitioring.

To my understanding, what it does is, in my counties case for example, divide the county into three section, each having it's own distinct radio system. They are, apparently, interconnected somehow. And from what I've heard, there may be some problem with monitoring them for some reason. I don't know anything else about it myself.

The smartzone you may be speaking of is actually known as a SmartNet II or SmartNet I system. Yes you can monitor this type of system. It is a trunked system by Motorola... Many trunked agencies are currently using it...such as San Bernardino, Palm Springs, San Diego etc. The trunked ids look like:II SYSTEM- 4272 or 3344 or 16444 or in a I system 000-4 400-1 etc.

So it is monitorable.... the way some of the guys on local group I belong to are talking it would seem all but impossible to monitor. One of them said that we would need three radios to monitor it all. I really don't understand how the whole thing works really... But as long as I'll be able to monitor it I won't worry about it too much.

It's just 2 seperate systems that can be networked together.
You won't need 3 seperate radios to monitor it. Just put each 'zone'
into a seperate bank on your trunk tracker & you should be covered.

I live in the Seattle area and our trunked radio system utilizes Smart Zone technology. The entire system here is called the King County Regional Trunked Radio System. Under that system are three zones, or agencies that use the regional system. All three of the systems (King County/Valley Com, Eastside, City of Seattle) simulcast into the main system. All Smart Zone means is that there are multiple systems tied into one. Each one still has its own control channel, but some channels are simulcast over the entire regional system. It is possible that someone else may have a better explanation here, though.

You only need one radio to monitor a Smart Zone system. Since many many many channels are simulcast throughout the whole system, monitoring is not a problem at all, except that you need to know the local control channel. Here in Seattle, I can only pick up two of the three systems, but the third is simulcast in so there is almost no problem. At first it is a little confusing, but you get used to it.

Hey this should help

SmartZone systems are Smartnet Type II systems that are networked together via Microwave or Land-line to provide multi-site wide area communications. Radios affiliate with a particular site, and affiliate with a talkgroup which allows the radio to talk on that talkgroup to other radios on other sites. Many large public safety and state agencies use SmartZone system for wide area communications. The following are the charateristics of a Motorola SmartZone system:
- Up to 28 channels per site
- Up to 65535 unique radio ids
- Up to 48 Sites
- Analog and/or Digital voice
- APCO 16 Compliant

Monitoring a SmartZone system with a Trunktracker is the same process as monitoring any other Smartnet Type II system, except that you can only monitor one site at a time. For you to monitor a specific talkgroup on a SmartZone site, someone's radio must be affiliated to that specific talkgroup. Therefore, if you are monitoring talkgroup "POLICE-NORTH" on a site where no radios have that talkgroup affiliated, then you will not hear any communications on that talkgroup until a radio affiliates to that talkgroup

Ok so after reading that my understanding is that it is a like a repeater but it only repeats the talkgroups with radio users in its area. So oneday you could hear Tulsa, OK PD-North in Muskogee, Ok if a user is on that talkgroup but once it is off it no longer is repeated

Hope this helps

Sincerely,

Terry Kimmel

Thanks for all the input folks... At least I
know I can still monitor when it all comes down.
Last word is late this year or early next year.
It shouldn't be a problem for me then, as I generally
monitor select talk groups rather than the entire system.

I live in San Diego and the San Diego and Escondido have there own track systems. The county has what they call RCS (Regional Communications System). This must be what you are talking about. They have a North and South loop. I only monitor the North loop since that is where I live. The North loop has 15 frequencies and 4 control channels, While the South loop has 15 frequencies and 2 control channels. The sheriff is switching to Astro digital. I believe they will also be on the RCS.
There is also an east loop. When fully installed the RCS will support over 70 agencies. I don't know if you can have two or more control channels in a bank or it you have to put each control channel in a bank and repeat the frequencies in each bank. I could be missing a lot of traffic and not know it. Too much going on in this area to monitor it all. And of course the delay in switching banks when trunking doesn't help.

I have the RH77 and I love the antenna. I switch it back and forth from my Pro-94 to my Pro-90 to my Icom HT. Maybe I should get more of them!

Good sensitivity, and I□ve never gotten any complaints when using it on the HT. You also may want to check out Pryme Antennas, too, such as the RD-98 or RD-78.

Have you checked with your local Radio Shack? If they don☐t know, see if they have a copy of the Police Call directory for your area.

Or, you could try searching one of the online databases, such as Percon. I just did and found this information

```
155.6850 WNMS894 CAMMACK VILLAGE, CITY OF PP LITTLE ROCK AR
PULASKI 344627/0922040
153.7850 WNMS894 CAMMACK VILLAGE, CITY OF PP LITTLE ROCK AR

Subject: [pro94owners] Help with Local Police Frequency, Please

I live in Little Rock, Arkansas. Within Little Rock, Arkansas there is a small police department that patrols the neigborhood of Cammack Village. It is a police force made up of 1 Chief and 2 patrols. I can't find anyone who will tell me the frequency used by this group! I asked the police chief and he said he was not authorized to give out the information. I asked the mayor of Cammack Village and he too, said it was confidential. How can I get this information??

Thank you!

Nut

499. New England Frequencies

Yahoo group: pro94owners
Date: 2000-06-17 11:38:54 UTC
From: Dilbert5W@aol.com
Topic: 499 Message: 499

Does anyone know of any web sites that deal with New England Frequencies?
I'm knew to trunk scanning system, having been given a Pro 94.
I do find it confusing to program, so any thoughts or suggestions will be helpful.
Thanks, John R. G. (MA)

John,

Long Island Scanning Resources is a nice place to find frequency information for New England. You can check it out at http://www.fordyce.org/scanning/.

Dave

The tone used by the SAME transmitter is a digital burst. If you un-mute the radio and listen, you□ll hear a series of 3 long digital bleep-bursts at the start of the alert, and 3 short digital bleep-bursts at the end of the alert.

Thanks for that info Glen I was wondering about that. I also noticed that "Emergency broadcast tone/signal" herd on the TV and radio is also included with the message. Also the TV had the same message at the same time as the pro-94 I have never herd an Emergency broadcast before it was interesting.

506. manufacturers test code?

Ah, even if you have done it correctly it would have cleared all memories, and then you will have nothing to trunk. You will have to put in all those frequencies again.

To clear or reset the scanner, hold down the 2 and 9 keys, turn on the scanner. CLEAR flashes for about 5 seconds as the scanner clears its memory.

Resetting The Scanner

If the scanner's display locks up or stops operating properly, you
might need to reset the scanner.

CAUTION: This procedure clears all the information you have stored
in
the scanner. Before you reset the scanner, try turning it off and
on to see if it begins working properly. Reset the scanner only
when you are sure it is not working properly.

1. Turn off the scanner.

2. While holding down the 2 and 9 keys, turn on the scanner. CLEAR
flashes for about 5 seconds as the scanner clears its memory.

Note: Do not turn off the scanner again until CLEAR stops flashing.
Otherwise, the scanner might not clear its memory properly.

From: Raiderman79@aol.com
Topic: 510 Message: 510

Thank you for the replies I've gotten so far, however I failed to mention that I did press the 2,9 buttons to clear my scanner. But now when I program my freqs back into the trunking banks I cannot trunk them. I can only scan conventional freqs. When I originally pushed the 2,9 and delay buttons at the same time and turned on my scanner it showed 00 00 00 the only buttons that work in this mode are the arrow keys,man, and the mon/clr buttons. Pressing the arrow keys give you for example: if-d2-00, or 0b-FA-00. I have done everything from reading the manual to calling the 1-800-the-shack. No one has been able to help unlock my scanner to preform its trunked scanning. So if anyone can help it would relieve my
withdrawals!
Sincerely, Chris

Chris,

Have you tried doing the reset procedure AGAIN? And make sure that after you press the 2 and 9 keys, then turn the radio on, it should say CLEAR and flash for a few seconds. DO NOT turn the radio off again until it stops flashing! I think a second reset may help you.

Dear eGroups Moderator:

eGroups is very pleased to announce that we are joining the Yahoo! family of services! To learn more about the announcement, you can read the press release at http://biz.yahoo.com/bw/000628/ca_yahoo.html

As a group moderator, you can assure your group members that eGroups and Yahoo! will continue to provide the same level of service and commitment that you have come to expect from both companies. We are very excited about extending the opportunities and new offerings that will emerge from this relationship to you and your group. We're just beginning to explore the possibilities and new features that we'll be able to offer as a combined company. As we go through this process, we
pledge to solicit your feedback on any proposed changes and keep you up-to-date on any changes to the eGroups service.

We are committed to sharing accurate and timely information with you about the service and the merger as it becomes available, but at this time, we don't have any specific details beyond what's included in the press release. We will keep you posted, but in the meantime, please continue to use the service as normal.

Thank you,

The folks at eGroups and Yahoo! Customer Care

-----Original Message-----
July 4th thoughts
Happy 4th a bit early. Enjoy this insight into our history.

Have you ever wondered what happened to the 56 men who signed the Declaration of Independence?
Five signers were captured by the British as traitors, and tortured before they died.
Twelve had their homes ransacked and burned.
Two lost their sons serving in the Revolutionary Army; another had two sons captured.
Nine of the 56 fought and died from wounds or hardships of the Revolutionary War.
They signed and they pledged their lives, their fortunes, and their sacred honor.
What kind of men were they?
Twenty-four were lawyers and jurists. Eleven were merchants, nine
Were farmers and large plantation owners; men of means, well educated.
But they signed the Declaration of Independence knowing full well that the penalty would be death if they were captured.
Carter Braxton of Virginia, a wealthy planter and trader, saw his
Ships swept from the seas by the British Navy. He sold his home and
Properties to pay his debts, and died in rags.
Thomas McKeam was so hounded by the British that he was forced to move his family almost constantly. He served in the Congress without pay, and his family was kept in hiding. His possessions were taken from him, and poverty was his reward.
Vandals or soldiers looted the properties of Dillery, Hall, Clymer, Walton, Gwinnett, Heyward, Ruttledge, and Middleton.
At the battle of Yorktown, Thomas Nelson Jr, noted that the British General Cornwallis had taken over the Nelson home for his headquarters.
He quietly urged General George Washington to open fire. The home was destroyed, and Nelson died bankrupt.
Francis Lewis had his home and properties destroyed. The enemy jailed his wife, and she died within a few months.
John Hart was driven from his wife's bedside as she was dying. Their 13 children fled for their lives. His fields and his gristmill were laid to waste. For more than a year he lived in forests and caves, returning home to find his wife dead and his children vanished. A few weeks later he died from

exhaustion and a broken heart.
Norris and Livingston suffered similar fates.

Such were the stories and sacrifices of the American Revolution.
These were not wild-eyed, rabble-rousing ruffians. They were soft-spoken men of means and education. They had security, but they valued liberty more. Standing tall, straight, and unwavering, they pledged: "For the support of this declaration, with firm reliance on the protection of the divine providence, we mutually pledge to each other, our lives, our fortunes, and our sacred honor."
They gave you and me a free and independent America. The history books never told you a lot about what happened in the Revolutionary War. We didn't fight just the British. We were British subjects at that time and we fought our own government!
Some of us take these liberties so much for granted, but we shouldn't. So, take a few minutes while enjoying your 4th of July holiday and silently thank these patriots. It's not much to ask for the price they paid.
Remember: freedom is never free!
I hope you will show your support by please sending this to as many People as you can. It's time we get the word out that patriotism is NOT a sin, and the Fourth of July has more to it than beer, picnics, and baseball games.
Happy 4th of July----
Hal Jennings

Chris,

Don't buy another SCANNER!

Sounds like in all your frustration, you have accidentally forgotten how to program a trunk freq.

Make sure you are in the TRUNK programming mode prior to entering your frequencies, and not in the manual SCAN mode.

Why the RadioShack scanner must be in the trunk programming mode, I have never understood. Visually, it is still in the same memory location, and the same frequency, but was programmed in a different mode.

Also, make sure that you have all the trunks frequencies. If you don't have them all, and the one you are missing happens to be the data channel, then it will not scan the trunk.

Hope this helps,

JoE

Hello Everyone,

I just got back into scanning after about a 25 year hiatus. Boy have things changed! I just got my Pro 94 yesterday and have starting playing with trunking. I'm using the RS Police Call book. I've entered a trunking sequence but I noticed that the data channel is the last freq I entered therefore it takes longer to acquire the data channel because it's at the end of the hunt. Is it better to determine the data channel and put it at the beginning of the bank? Any other tips would be appreciated also.

For a Motorola trunking system, yes. But if you're entering in an EDACS system, you have to put the channels in the scanner in the "logical channel order." This "logical channel order" sometimes appears to lack logic, because it can be in any order the system programmer chose. The G-trac site and the Bearcat site are good resources for information on EDACS sites. Here are their URL's:

Gtrac - http://gtrac.ztn.net
Bearcat - http://www.bearcat1.com/fleet.htm

Hope this helps you out...

Subject: Just got mine!

Hello Everyone,

I just got back into scanning after about a 25 year hiatus. Boy have things changed! I just got my Pro 94 yesterday and have starting playing with trunking. I'm using the RS Police Call book. I've entered a trunking sequence but I noticed that the data channel is the last freq I entered therefore it takes longer to acquire the data channel because it's at the end of the hunt. Is it better to determine the data channel and put it at the beginning of the bank? Any other tips would be appreciated also.

For a Motorola trunking system, yes. But if you're entering in an EDACS system, you have to put the channels in the scanner in the "logical channel order." This "logical channel order" sometimes appears to lack logic, because it can be in any order the system programmer chose. The G-trac site and the Bearcat site are good resources for information on EDACS sites. Here are their URL's:

Gtrac - http://gtrac.ztn.net
Bearcat - http://www.bearcat1.com/fleet.htm

Hope this helps you out...

Thanks for the info. It's a Motorola system. I just re-arranged my
memories this moring with the data freq in front.

Frequency Scanner & Amplifier

Dear Fellow Radio Enthusiasts!

I have been a fan of CBs, HAMs, and police scanners
for years but I have

to get rid of some of my equipment as I am moving and
have had some
of it in storage here in my house for a few years. I
also have way way
too much radio stuff and need to get rid of some of it
for that reason
too!

Check these links to my online advertisements. I
promise I am not a dealer....just a guy trying to
exchange equipment for some $.

Tube Amplifier

530. Keypad beep

Yahoo group: pro94owners
Date: 2000-07-31 06:08:18 UTC
From: Mike Cummings
Topic: 530 Message: 530

OK, I'm posting this in the fear of being buried in RTFMs, but rumor has it that there is a way to turn off the keypad entry beeping, and I don't see it in the manual. I've looked. I've scoured message boards for this topic. But I've been known before to fail to see an object right before my eyes, so I might just be incredibly dumb.

Now I get to do it to myself. I found it about 30 seconds after I sent this. Of course, I couldn't see it any of the 3 times through BEFORE I sent it, could I?

Page 37, Turning The Keytone Off/On.

1. Turn off the scanner.

2. While holding down L-OUT/S/S, turn on the scanner. OFF BEEP appears.

To turn the key tone back on, repeat these steps. ON BEEP appears.

537. san/search ?

Yahoo group: pro94owners
Date: 2000-08-16 04:38:22 UTC
From: Jeffrey Witzel
Topic: 537 Message: 537

I am not sure, but I think I remember seeing in the manual PRO-94 that while searching the radio will stop ona freq. being used for a few seconds then move on to the next freq. being used. Is this correct, as it seems that once it stops it remains on that freq. until the
conversation is over?

Is also possible to put the radio in scan mode and have it stop only for a second or two on a channel with activit and then move on, haveing to have to hit hold or manual once you hear sonething on a channel/freq.

Any help or comments would be appreciated. Thanks.

PS i am also having trouble with the trunking. Have all freq. entered in order, do a search and it just stays in search, no scan.

If your frequencies are entered correctly, and you have entered the data channel, and have the correct type trunk, followed by selecting the banks to scan then it would mean that you are out of range of the transmitter. The scanner searches till it locates the data channel. If that is the case you might try an outside antenna.

540. "Go to Private" loophole, "bug" discovery?

Yahoo group: pro94owners
Date: 2000-08-17 21:58:00 UTC
From: ChicagoStretch@AOL.com
Topic: 540 Message: 540

I was just listening to a 4 ch. Motorola Type II system for a prison near me (Stateville in Joliet) and one of the Correction Officers told the other to go private and I could see activity on the indicator bar. Out of curiosity I switched from "trunk" to "scan" to see if there any audio and the same two were talking. Maybe the warden ought to buy a 94?..... Just info. for the masses and, has anyone else stumbled upon some of these "bugs"?

The Trunktrackers were designed not to "hear" any conversations when the users were in private mode...that is when only the two units will hear each other. As you discovered when you switch from trunktracking mode to conventional you now hear everything. It's just the way these scanners were designed.

542. Pro-94 computer interface?

Yahoo group: pro94owners
Date: 2000-08-25 11:46:28 UTC
From: kb8zms@axom.com
Topic: 542 Message: 542

I recently disassembled my Pro-94 to take a peek inside (because as a ham, it's required, that's why!). After pulling the RF board off, I noticed on the logic/control board that there is a connector that appears to be similar to the BC245 computer control interface, that protrudes through the shield. I did not remove the shield, but from what I could see, the circuit traces appeared to run over to the controller IC. From what I could see on the board through the shield, the connector was labeled "I202". I'm assuming that the "I" means interface. It looked like a small card edge slot. Does anybody know if the Pro-94 is capable of being interfaced to a computer? If indeed it is, how strange that Uniden would choose to put the interface on the scanner, but not give it a door to the outside world, instead, leaving it hidden away inside the scanner! I suppose so that it doesn't take away from sales of the BC245. All the circuit boards are labeled UNIDEN, by the way.

I found this web page that contained a description for the PRO-94
that
you might be interested in. The web page is
http://members.aol.com/TrunkRadio/
and here is the discription I saw. Note the PC interface.
Hmmmm..... you may have something.

Model: 20-524
Price: $299.99
Freq range: 29-54, 108-174, 216-225, 380-512,
806-960 (excluding cellular) and
1240-1300MHz
Power: Requires 4 "AA" batteries or adapter. AC
#273-1767/H, DC #273-1810/H
Jacks: Earphone, antenna (BNC), power, PC Interface
Includes: Detachable flexible antenna, belt clip.
Size: 6 5/16 x 2 5/8 x 1 3/4

546. Pro-94 Undocumented Kepad Functions

Yahoo group: pro94owners
Date: 2000-08-30 16:19:42 UTC
From: Jayson Williams
Topic: 546 Message: 546

I have recently purchased a Pro-94 and have been trying out the 2+9 keypad combinations. So far I have figured out what a few do.

All combos are with unit off. Then with keys pressed turn unit on.

2 & 9 - will clear frequency memories.
2 & 9 & trunk - will restore some memories that were cleared.
but not in the same banks as before. Possibly
restores bank 1 only but places freqs
in bank 8 instead.
thats what happens on mine
There are several others but I have not been able to figure out what they do.
I am sure there are others working on this same thing. If you have any other keypad functions and know what they do, feel free to share the knowledge.

From: Glen Tubbesing
Topic: 548 Message: 549

Huh? What the heck is "input trunking" and "out no trunking?" If you're saying what I think you're saying, you can't trunk on the input channels to a repeater, cause there's no control channel on the input side. Besides, you'd have to be close to the unit transmitting in order to receive their input signal to the repeater.

Here's what you can and can't do with the Pro-94...

Can - track any MOTO or EDACS system
Can - track up to 50 talkgroups per system, in 5 banks of 10 talkgroup ID's
Can - enter trunked and conventional channels in the same bank

Can't - listen to conventional and trunked systems at the same time... if you have trunked and conventional channels on the same bank, you must lockout the trunked channels in order to monitor the conventional channels if you don't want to lock on to the control channel every time around.
Can't - scan thru all 1000 channels at one time... only 500 at a time are available
Can't - tell you if you've duplicated frequencies in the scanner. (The Pro-90 will beep at you if you enter in a frequency that has already been entered.)

550. Fw: New Improved Pro 94 A - User's manual

Yahoo group: pro94owners
Date: 2000-09-12 21:16:58 UTC
From: 4phun
Topic: 550 Message: 550

IMHO the new PRO 94 A is a 'kick ass' trunking radio from Radio Shack and a serious competitor to the BC 245 XLT.

Subject: New Improved Pro 94 A - User's manual

Hello,

This email message is a notification to let you know that
a file has been uploaded to the Files area of the 4phun-radio
group.

File : /PRO 94 A manual.pdf
Uploaded by : healey@...
Description : New Improved Pro 94 A - User's manual in pdf format

You can access this file at the URL

http://www.egroups.com/files/4phun-radio/PRO+94+A+manual%2Epdf

The PRO 94 A version is now a suitable trunking radio scanner with the firmware changes made by Uniden for Radio Shack. The PRO 94 A was introduced late in June and may be a some of the Radio Shack stores near you by now. One big change is that it can trunk and scan conventional frequencies at the same time with a selectable delay of five seconds as in the original BC 245 XLT design or with a delay of 1 second of no activity on the TRS.

Grab the manual and start reading the details yourself on page 39.

IMHO the PRO 94 A is the only decent trunktracking hand held scanner that Radio Shack currently sells. When it goes on sale for $200 or so it is very competitive compared to choosing the BC 245 XLT.

Very nice! The new firmware seems to include a couple of changes that I've wished for in the Pro-94: auto backlight, and simultaneous trunked and conventional scanning.

Any idea if they've changed the way priority channels work in trunked mode? I've always thought that was done poorly.

When does this radio go on sale again?

Gerry

Look for a new and updated manual. If it has an automatic light feature it is the new version. Hold the light button down while turning the scanner on. There should appear a brief message on.lit
The original PRO 94 did not have an auto backlight function.

See the following 4phun-radio message for more info ...

From: Billy Bearden
Topic: 554 Message: 554

Hey Guys -
Is There Any Rumor To The Truth That There Is A New
94 (Pro 94A) Out ?
Word On StrongSignals Is There Has Been A New 94A
Since July With Conv / Trunk Tracking @ The same Time =
Like A 245 , 92 , & 92A
I Called 1-800-The-Shac Today & The Guy Had No Idea About Any 94A. I Asked My Local RatShak About A Firmware Upgrade - They Looked @ Me Like I Was Chanting In Hebrew ....
Anybody With Tips , Help , Answers (Not RatShak) Or Enlightenment Please Respond - I Would Like To Upgrade My Firmware To That Of The Legendary Pro94A.....
Thanx

Confirmed. I purchased one slightly less than a month ago. The nameplate on the back has '20-524 A' on it, with the 'A' being inside a square. Date code is 05A00, serial number 06003xxx. It has the enhancements described here by others.

Do we have to buy a new radio or can the update the software in the original pro94??
Since there is some kind of data port inside the radio I would think that it could be upgraded, unless they actually changed the hardware inside.

557. Upgrading My 94....

Yahoo group: pro94owners
Date: 2000-09-15 17:08:40 UTC
From: Billy Bearden
Topic: 557 Message: 557

Ladies & Gentlemen , Go With Me As I Set Out On This
Most Exciting & Mysterious Of Adventures....
I Am In The Process Of Having My 94 Transformed Into A 94A & I Will Get Ya'll Up To Date & Keep You Posted For All Those Who Would Follow In My Footsteps -

* September 11th , 2000 = I Read On StrongSignals Message Board About A New Version Pro 94 (Pro94A).
* September 12th , 2000 = I Go By My Local Radio Shack & Inquire About The ' Pro94A' , But Was Met With Incompetence. Called 1-800-the-shack , But Was Told There
Was No Such Thing Existing In This Galaxy...
* September 13th , 2000= I Post A Question To The Group
To Verify The Existance Of A 'Pro94A'
* September 14th , 2000 = Jim Shorny Confirms The Pro94A
* September 15th , 2000 = Took My Original Pro94 To ANOTHER Radio Shack (30 Miles Away) And Told The ShackDroid Of My Desire To Have The 94 Upgraded To A 94A , After Suffering Wild Stares & Having To Slowly Repeat My Request , The ShackDroid Called 1800theshack To Ask If This Was Possible. They Said Go Ahead , Send It In As Long As I pay For It (My Intention All Along)
So At 11:43 AM On 09/15/00 I Turned Over My Pro94 To The ShackDroid & I Was Required To Make A $20 Deposit On A $61 Estimate (For The Upgrade). It Should Have Went Out Today & Should Get There In Less than A Week..... I Will Continue Updating Ya'll As Events Unfold - Hopefully I Can Have A Pro94A Before October 1st :-)
I Am A Little Concerned However Due To The ShackDroids' Spelling Abilities -
" Catalog # = 200 - 0524 (20-524)
Model = Scranner (Scanner)
Condition = Face Scrath (Scratch)
Complaint = Up Garde (Grade)
I May Get Back A New Version Of The Golf Scope ;-P

From: dmcdyno@aol.com
Topic: 558 Message: 558

Well, I too called 800theshack and..... after being transfered 3 times, the final answer was "No". No one seemed to know anything about the Upgrading of the pro-94 to the Pro-94A. "Well, they are thinking about offering software updates for the Pro-92. But, not the Pro 94." That was the answer from the ShackDroid. I told him that I was SURE that it was for the Pro-94 and not the Pro-92... But, I dont think that I got any where :(He then went on by telling me that there was no difference between the Pro-94 and then Pro-94A.

In the closing of this phone call, he went ahead and wrote up some kind of report, and said that someone would call me with info that has been (or not been) found on the update. I *SHOULD* get the phone call on Monday the 18th..... We will see :)

If anyone does have any suggestions on how to get the 800ShackDroid's to realize that there is an update for the Pro-94 I would like to hear about it!

Thanks

Jim Koskela

Ok... This may not be Moral... but if you really really want the PRO-94A
here
is what you do.

Go to Rat shack, buy the PRO-94A... Put your PRO-94 in the box, and return
it.
It's best to pay with a CC because any purchase over $100 (cash/check)is
refunded by check, which usally takes about a week.

From: Billy Bearden
Topic: 560 Message: 560

Here Are Some Thoughts On The RatShak & The ShackDroids' Mentality -
You Call Or Visit Them For Legit Info On Or Questions On Bettering An
Existing Product , They In Turn Deny Or Refute Your Crazy Out Of Left Field
Rantings , They Let You Speak With Representatives From 17 Departments
Within The RatShak Organization Before They Shunt You Off To The
"Yeah-Right-We-Understand-Everything-You-Say-&-We'll-Get-Right-On-It-Just-Fo
r-You-Today" Department , They Say Sorry We Have No Idea What Your Problem
Is
There Is Nothing Wrong With Us It Is You & In Any Case You're Stuck &
Screwed.....
I Believe That If I Bought A New Plain Car In January & In August The
Manufacturers Added
Something Like An Airbag Or ABS , That I Should Be Allowed To Be Upgraded To
The Newer Stuff (It's Different With Chrome Wheels Or A Vinyl Top) Even
If It's @ Some Cost To Me
Instead Of Being Forced (If I Want The Newer Modifications) Into Buying A
New Car Just For Said Airbags Or ABS & The Same For Pro94s.
I Will Concede That With All The RatShaks Out There & All The Droids They
Employ & With All They Products They Handle There Will A Few That Won't Know
About Every Modification Of Every Product On Thier Shelves , But For Pete's
Sake - Shouldn't The AnswerDroids Know ? Doesn't Tandy , Texas Instruments ,
Uniden , Gre , Etc... Keep Them In The Loop Or Are They
Not So Informed As To Allow Plausable Deniability ?
I Am Going To Pray (Yes) That My Pro94 Will Return A Pro94A For The
Aforementioned $61 Then
Others May Follow And All Will Be Right With The World Once More - I'll Keep
Ya'll Posted :-)

Hey Guys and Gals:

Has anyone thought of contacting Uniden and asking them about the upgrades of the Pro 94 to the Pro 94A? If I recall, Uniden manufacturers the scanners for RS under the Pro series numbers.

Perhaps the 'Consumer Representatives' at Uniden will be informed about the modifications, and even the connectors hidden deep in the recesses of the case for connection to a computer. From what I have read the past few days, the Droids at RS seem to be uninformed.

Back in the Dark Ages, 20-30 years ago, RS actually wanted people, in its then new chain of stores in every shopping mall, to know something about electronics. Today, it appears as if all they want are warm bodies that can operate a cash register and keep the store neat and clean. Since Mr. Tandy passed away, RS has taken a turn downward in many ways. It used to be a great place to get the parts for electronic projects and products, but today, it is very much different.

Dave

Do we know for sure what the differences are? I'm hoping you will report back....

I bought my 94 the week they came out in stores and I really like it. I use it for 95% railfanning, but i've got only 200 out of 1000 channels used. I've never even used the trunk-tracking.

I just wish the backlight would stay on or off!

568. HYPOTHETICAL New Pro94A for $179.99!!!

Yahoo group: pro94owners
Date: 2000-10-11 04:56:40 UTC
From: elliston@ix.netcom.com
Topic: 568 Message: 568

The author offers the following hypothetical for the purpose of
striking up a spirited conversation about our friends in Fort Worth.
Although the author is an attorney, nothing herein should be taken as
legal advice, and before imitating the acts of our hypothetical
friend Rodney Nerdgadget, you should seek the advice of legal
counsel,
as applicable law will vary from one jurisdiction to another.
Rodney, upon receiving the most recent Radio Shack flier (#592
appears
in bottom right corner of back cover), turns to page 38, where,
directly under the words "FIND THE EXCITEMENT" he see what appears to
be a Pro91 advertised for $179.99, not such a fabulous bargain. The
stock number indeed matches the Pro91. Looking a bit closer, Rod
reads footnote number 1, "Follows analog Motorola I, I/II,
GE/Ericsson
and Johnson/Uniden trunked police/fire radio systems." The guys in
Fort Worth have goofed! It should have been footnote 2, which
accurately describes the Pro91. Rodney immediately gets out his
phone
book, and calls Shacks until he finds one that has some Pro94A's in
stock, but no Pro94's. Off he goes to the Shack, and demands that
they sell him a $179.99 handheld scanner which performs as described
in footnote 1, which more acccurately describes the Pro94A than the
Pro91.
Questions:
1. Will the manager punch the override keys without calling Fort
Worth?
2. Has the manager ever read the small print in the bottom left
corner of page 37, and if he has, does it take the boys in Fort Worth
off the hook?
3. Is there really any difference in the new Pro94A backlight, or is
that illumination merely a reflection of the red faces in Fort Worth?
4. What efforts will the boys in Fort Worth make to identify me and
express their annoyance with this message?

569. PRO-94A

I'm pretty sure most companies (incl. RadioShack) have policies that say they are not liable for misprints in their catalogs, and you can't hold them to it. This case would seem especially thin, since the stock number is for the correct item. But, if you're willing to test it, we're happy to hear your results. :-)

572. Pro94 To 94A Upgrade Update

Yahoo group: pro94owners
Date: 2000-10-22 18:40:00 UTC
From: Billy Bearden
Topic: 572 Message: 572

Hey People.
Well , I Got My Scanner (94) Back FINALLY On Friday
October 20th @ 5pm - The Results Are In - Here Is What Happened ....
On SEPT 15th , I Turned My 94 Into The Local RadShak
For Upgrading To A 94A - They Estimated The Work Would Be $69. I Had To Put Down A $20 Deposit. I Was Told It Should Take 2 Weeks...
On SEPT 28th I Was Contacted By The Repair Shop For My Authorization , Which I Gave. I Was Told The Parts Would Be $17 & Labor Would Be $49 & That I Could Get It In 7-10 days....
On OCTOBER 6th I Called The RadShak , Nope No Scanner. Try Again Later.
OCTOBER 10th - Nothing
OCTOBER 13th - Nothing
OCTOBER 15th - Nothing
OCTOBER 17th - Nothing
OCTOBER 20th - It Is In !!! That Is The Best News Of This Whole SORRY AFFAIR !!!
Nope , It Isn't A 94A , It's Still My Original 94. All 833 Frequencies Are Wiped Out. I Am Charged $67.49 - & Guess What For ?!? A STINKING BRAND NEW UNNEEDED UNWANTED UNREQUESTED FRIGGIN FACE PLATE !!!! *@%#$! !!!!! There Wasn't Anything Wrong With The One I Had On It To Begin With.... On The Work Order It States " Comments/Complaints - UPGRADE 94"
I've Gone Through A Lot Of Frustration , Waiting , Dealing With Delays & Lies , Been Without My Scanner For 35 DAYS , And Paid Some Technician (?) $49 To Remove & Replace 4 Screws To Install
Something I Didn't Want Or Ask For + I Now Have To Decide If I Want To Go Through The Whole B.S. Again & Hope They Get It Right Or Go Ahead & Reprogram The 833 Freqs.... I Am Open To Comments On What Ya'll Would Do In My Shoes -
Thats My Adventure , Will It Continue ?
Talk To Ya'll Soon

From: Brad Howard
Topic: 572 Message: 573

Hello Billy,

I took my Pro-94 into RS and explained that I noticed that the newer scanner is the 94A model and would they let me upgrade to the newer model by trading in my current Pro-94 original. I had purchased the scanner a couple of months before and it was in new condition. The sales person was happy to do so, he was able to look up the sales recept and verify the date and price I had purchased the scanner. I had purchased the orginal scanner on sale so I just had to pay the difference and wolla, I now have the PRO-94A which work just wonderfully. I can now scan trunked and standard freguencies with ease.

Have a nice day.

Brad

578. Recruiting Pro-94 experimenters

Yahoo group: pro94owners
Date: 2000-10-29 20:17:48 UTC
From: Jayson Williams
Topic: 578 Message: 578

I am looking for people who will conduct some research concerning the Pro-94. Specifically with the various keypad functions. Many people know about a few of the 2+9 functions, but I have descovered many more and I would like some help trying to find out just what they do. For instance, note the following:

WITH PRO-94 OFF
PRESS & HOLD 1+5+9
WHILE PRESSING KEYS, TURN PRO-94 ON.
THE RESULT IS A DISPLAY OF
"1.08" FOLLOWED BY "8CCDH"

I thought this might be some kind of password.

Additionally if you hit the HOLD key just before the display switches to '8CCDH', the 94 will start scanning all channels in a bank including channels that are locked out. So instead of skipping channels containing a freq of 000.000, the 94 will scan them also.

This takes some timing. It took me several attempts to recreate.

I also found that the same effect can be accomplished by using
2+9+4

Pressing the E button after this will cause the 94 to reset back to the norm. I thought that if the cellular freqs. are locked out in the same fassion, this function may unlock it.

There are also several 2+9 functions that I would like to understand Here are some that I know of.

2+9+HOLD
2+9+S/S

I would like if a few of us could get together and see if we could figure some of these out.

Please send all research to jaysonjfw@...

More likely this is a version number and a checksum of the ROM. Mine shows the same values. What does the Pro-94A show?

583. Pro-94 SERVICE Manual

Yahoo group: pro94owners
Date: 2000-10-31 22:43:52 UTC
From: Jayson Williams
Topic: 583 Message: 583

Dear Pro-94 owners.

I am proud to announce that I am in posession of the Pro-94 Service mannual. Not the users manual, but the actual Sercvice manual. Now I am an Electronics Tech. by trade, but I must admit that I am at a loss when looking at the schematics of the Pro-94. For that reason I am offering to provide copies of the tech manual for the pro-94 to those who are willing to beat some of its secrets out. I must say that some of the questions that I had been asking about the 2+9 keypad functions, unfortunatly were not answered in the tech manual. However I am sure that in the hands of the right person, one of the biggest questions about the Pro-94 can be answered.
???How do you unlock cellular???
For knowledge sake only of course.
Those of you willing to take on this challenge, please send me an email at the following address

jaysonjfw@...

With a subject of Pro-94 Service Mannual.

Request the pro-94 service manual and we will make arrangements to get it to you.

From what I have seen the only bad thing that has happened is that
the freqs. that you have stored can get wiped out
That kpad function is 2+9

From: Gerry Wheeler
Topic: 583 Message: 589

I doubt very much if you'll find that from the service manual. I doubt it can be done at all.

Remember, the service manual probably only covers the electronics of the radio, but much of the functionality is in the firmware that runs the processor. I would imagine that the cellular block is done partly in hardware, and partly in the firmware. Unless you can change the firmware, you probably won't make any significant changes to the radio.

In fact, the firmware controls so much of the radio that I'd be willing to bet the Pro-94A and Pro94B use the exact same hardware, and only the firmware has been changed. (And that would explain why the version number and checksum are different for the Pro-94A. (See the previous messages about the 1+5+9 keypad combination.))

On the electronics side, LSI (Large Scale Integration) has allowed the manufacturer to put many, many functions into a single chip. The schematic diagram often looks more like a block diagram. It shows how the chips are interconnected, but nothing about the various functions contained within each chip.

I do have one thought, though. (Er, I guess this makes number three, doesn't it. :-) If the manual shows the matrix used for the keyboard, you might get an idea of which key combinations to try when you're looking for magic startup tricks. More precisely, you'll know which combinations to avoid. The processor needs to be able to read multiple keys, but it can't do that if they're in the same column or the same row of the matrix. By noting which keys are in which rows/columns, you should be able to avoid combinations which are impossible for the processor to make use of.

If you can generate an electronic copy of the manual (scanned or whatever) it would be nice to see it.

Gerry

[PS. I really don't understand the need to unblock the cellular frequencies. If listening to cellular phones is anything like listening to cordless phones, it is the most boring thing in the world. I no longer have the cordless freq's in my scanner.]

Hello Gerry,

How do you do the download from a PC? As far as I know of there is no PC connection jack on the scanner. Am I missing something here?
It would be wonderful to be capable of loading the data into the scanner via a PC download if possible.

Thanks,

Brad

As far as I know, the Pro94 cannot. The reason I made that comment was because of the "-load-" that was displayed on the screen (see previous thread).

The Pro64, which I also have, does download from a PC, which is nice. The download cable plugs into the earphone jack! Very nifty. No other jack is required.

Also, while I'm thinking of it, the Pro94 does have a connector on the circuit board, although you can't see it from outside. Nobody has been able to determine if it can be used for anything.

598. Multiple Agencies Share New System in Peel Region

Yahoo group: pro94owners
Date: 2000-11-07 01:14:24 UTC
From: jeff_scannerdude@yahoo.com
Topic: 598 Message: 598

Ha friend told me about this web page and I will thing other may link this..

Multiple Agencies Share New System in Peel Region

Improved reception, cost savings, increased security, and a capacity for growth are just some of the benefits to result from a joint radio communications network in Canada's Peel Region, Brampton, Ontario.

Costs for the infrastructure are shared by Peel Regional Police, Mississauga Fire and Emergency Services, Brampton Fire and Emergency Services, Caledon Fire and Emergency Services and the Region of Peel's Public Works Department. The system, connecting individual users with central dispatch, should be up and running in June 1997, with final acceptance of the system scheduled for September. After an extensive evaluation, the Voice Communication (V-Com) Steering Committee chose Motorola's ASTRO☐ SmartZone☐ technology.

"By sharing the system, we're not duplicating efforts and spending unnecessary funds," says Peel Regional Police Superintendent, Sue Honer, Officer in Charge of Information and Technology Services and Chair of the Steering Committee for the project. "This contract gives us the latest equipment off the research floor."

The Motorola ASTRO SmartZone digital trunking system has the unique ability to connect multiple Peel Region agencies together in emergency situations regardless of frequency band or technology (analog or digital). This wireless system is one of the steps taken by Peel's emergency services to achieve an immediate increase in productivity and safety.

Partnership Provides Cost Efficiency

For cost-efficiency reasons, Peel Regional Police started to talk to other regional agencies about their radio communications needs. All of the agencies needed improvements over their current system. The interest of these departments in a jointly-funded system led to the creation of the V-Com Steering Committee, which negotiated the agreement with Motorola. Essentially, the departments share the costs for a common infrastructure, and pay for their own user equipment, which includes mobile and portable radios, a firehall system and pagers.

"A system of this magnitude required a solid team effort between the user community, represented by V-Com, and Motorola," says Mike Hortie, Motorola Vice President. "As we go forward, the partnerships

which were formed through the development phase will contribute to a well planned, rapid implementation with no surprises."

System Designed for Capacity and Coverage

The 800 MHz trunked radio system has 21 channels and 7 radio sites. Two new towers will be built at the Inglewood and Caledon radio sites. Five additional radio sites will be located on buildings in Mississauga and Brampton. The system will support close to 2,000 users and will have enough capacity to meet the anticipated growth for the next 15 years.

"In our case, we're going from the 140 MHz range to the 800 MHz range which provides for much better reception and transmission of the signal," says Superintendent Honer.

"The system also provides a level of in-building coverage essential for emergency response agencies," says Inspector Carl Spratt of Peel Regional Police, who serves as the full-time project manager.

"The primary importance to the Steering Committee was ensuring that every user had acceptable radio coverage, that they could use the system regardless of where they were," says Inspector Spratt.

Motorola also has an extensive track record in the implementation of communications networks in Canada - including Metro Toronto Police, York Regional Police, Hamilton-Wentworth Police, North York Fire Department, Scarborough Fire Department, Etobicoke Fire Department and Oshawa Fire Department. The engineer who implemented the Metro Toronto Police system, Mr. George Oksiutik, now fills the same position with Peel Regional Police. "That experience," says Inspector Spratt, "has been invaluable to this project."

Yet another benefit is an added level of security protection, which will be of particular use to Peel Regional Police's special units.

"The Motorola system is not the end of planned improvements to radio communications. In another few years Peel Regional Police will look at replacing their current computer-aided dispatch. This contract has helped to form the foundation for other joint communications initiatives," says Superintendent Honer.

I think it is roughly "Hi. A friend told me about this web page, and I would think others may link to this...". Maybe his keyboard is dead. It is followed by a press release that appears to be from 1997. Maybe this message has been floating about in the ether since 1997, and has deterioriated, losing bits along the way. :-)

601. A new keypad Function for the Pro-94 experiment

Yahoo group: pro94owners
Date: 2000-11-08 22:06:48 UTC
From: Jayson Williams
Topic: 601 Message: 601

Hey.

In an effort to continue the Pro-94 Keypad Experiment, I proudly submit the following.

I would like some of you to try this out and see if it leads to anything.

With the power off press the TRUNK & S/S keys.
Then turn the power on.

The display lights and stays lit. As far as I can tell it will not go out. Unfortunatly it appears that no other aspect of the radio will work in this mode. Mabe someone can figure out how this can be used.

To get back to normal just cycle the power.

Let me know what you find out.
Jayson.

602. Would you like the Pro94 Service Manual

Yahoo group: pro94owners

From: Jayson Williams
Topic: 602 Message: 602

Hello all.

I will make a copy for you.

_____
For some time I had been looking for the Pro-94 Service manual in
hopes that it might unlock some of the secerets that many of us have
been asking about the Pro-94.
...And even though I am an electronics tech. I have not been able
to figure out much, mostly because my skills are not as keen as I
once thought. In hopes that someone out their is more knowledgeable
than me when it comes to looking at schematics, I am sending out the
manual to people who request it. $8.00 I figure will cover the cost
of shipping anywhere in the US. If you like I have an account with
paypal or you can send it through the postal system.
My email address for paypal is jaysonjfw@...

The mailing address is
Jayson Williams (Pro94 Manual)
6846 Kenny Lane
Portsmouth, Va. 23704

By the way this is the Service manual that the Repair Tech. uses to
fix and test out the Pro-94. Not the users manual.

Hello All,

I've come across a neat test mode on the Pro-94A.

1). Turn the scanner On.
2). Press "E/SVC" Key.
3). Press and Hold down the "ALT + E/SVC" for a second or so.

You should hear a series of tones and the word "Test" will flash on the display, also "L3", "L2", and "L1" will appear on the left hand area of the display. Also note that this seems to only work if the service is on the WX band.

Have fun.

Hello,

Something to try.

1). With the scanner off, hold down the "ALT" + "2" + "9".
2). Turn the scanner on while holding down these keys.
3). Now press the up or down arrows.

You will be presented with a series of what looks to be HEX
codes. Does anyone have a guess what these are?

Later.

From: Chad Z. Hower
Topic: 608 Message: 610

Anyone interested in one?

Its just a few months old. I have the box and everything. Im assuming everyone here has a Pro94, so assuming I have to sell it elsewhere, what should I ask for it?

Its worked great, but I finally got my Kennwood TK-270GK radio programmed and I dont need the scanner any more except for occasional use. I was using it for Volunteer Fire Dept use.

If I cant get a good price, I might just keep it for the races, etc.

Date: 2000-11-13 01:52:19 UTC
From: David Rudnick
Topic: 578 Message: 614

Hmm... I was looking around more. The same thing happens if you start up with 2+9+TRUNK and keep them held down as you start. (First "-loAD-" then this:)
TRUNK
M
Ct -- ---
HOLD

Here's another (new?) one:
Start up w/ 2+9+HOLD
You get "-loAD-" and then the scanner deletes your frequencies and replaces them with new ones:
Nothing in bank B, but bank a has these:
Ch-Freq
1 144.000
2 144.020
3 144.040
4 144.060
It continues, with this pattern, all the way through bank A, finally putting 153.980 in channel 500.

And yet another:
Start up w/ 2+9+SCAN
Same load screen as before, deletes freqs and replaces w/:
Bank A:
Ch-Freq
1-30.050 51-29.000
2-40.840 52-512.000
3-49.900 53-500 empty
4-138.150
5-162.400
6-173.225
7-406.875
8-453.250
9-511.9125
10-108.500
11-118.800
12-127.175
13-135.500
14-29.000
15-54.000
16-806.000
17-857.200
18-911.500
19-954.9125

20-1299.9125
21-216.005
22-50 empty

Thats it for now

615. Project 25 technology

Yahoo group: pro94owners
Date: 2000-11-13 21:36:26 UTC
From: jeff_scannerdude@yahoo.com
Topic: 615 Message: 615

If there still were any questions that Project 25 technology has been proven and that compliant systems are available for public-safety applications today, users answered those questions in the last 12 months. This past year saw increasing numbers of agencies at every level - local, state, provincial and federal - implement, buy or plan for Project 25-compliant systems.

Even with these achievements and as work continues to define a possible second phase for the project, another important Project 25 milestone will be achieved later this year. The State of Michigan will become the first in the country to install a digital Project 25-compliant trunked communications system. Motorola will install a system that complies with the Project 25 trunking, common air interface and encryption standards as part of the second phase of the state's implementation plan.

Michigan's second phase implementation will extend the statewide system to the southwestern and western parts of the state, including Battle Creek, Grand Rapids, Kalamazoo, Holland and St. Joseph. At the same time, the system's first phase will be upgraded to include Project 25 trunking, common air interface and encryption.

The state formally announced completion of the first phase in February 1997. At that time, Governor John Engler said system installation was on time and within budget. Phase one covered Michigan's southeastern cities and counties, including Detroit, Jackson and Lansing.

Michigan is only one recent Project 25 story.

The State of New Hampshire was an early Project 25 supporter, choosing a Motorola ASTRO conventional digital communications system compliant with the Project 25 standard. That state's installation is scheduled for completion this year. More than 40 other government entities also have made the move to Project 25 compliant conventional systems including Yonkers, New York, and Branford, Connecticut. Correctional Service Canada, the department that manages the Canada's federal correctional facilities, is replacing communications systems in 28 facilities with new ASTRO conventional digital VHF systems that are compliant with the Project 25 standard (see page XX).

During 1997, Motorola shipped the first trunked systems with a Project 25-compliant common air interface. Sarasota County, Florida, became the first to dedicate one of those systems last October.

The cities of Baltimore, Maryland, Cedar Rapids, Iowa, and Vicksburg, Mississippi, along with the counties of Calhoun and Talladega in

Alabama, Jefferson Parish in Louisiana, Fairfax County in Virginia and San Diego County in California moved ahead with installation of their new Motorola digital trunked communications systems, each of which will comply with the Project 25 common air interface.

MTS Mobility, a subsidiary of Manitoba (Canada) Telecom Services, announced in January it will extend the company's Motorola trunked communications system provincewide. Compliant with the Project 25 common air interface, the system will support the company's FleetNet□ service, an enhanced, trunked radio-dispatch network, providing users one-to-one or one-to-many wireless communications. Among other customers, the MTS Mobility FleetNet service will support the Royal Canadian Mounted Police and the Winnipeg Police Service.

We also shipped more than 70,000 mobile and portable radios for systems with Project 25-compliant features and capabilities during the past year.

In recent months, significant new Project 25 orders were received.

San Francisco contracted in October for a new ASTRO digital 800 MHz trunked radio communications system, compliant with the Project 25 common air interface. The system is part of the city's overall upgrade to a new enhanced 9-1-1 system with completion targeted for 2000. The San Francisco system will consolidate the city's nine existing radio communications systems into one new system. Motorola will design and manufacture the new mixed-mode analog and digital radio system, providing the software and hardware components for a new communications infrastructure and 1,000 mobile radios and 3,000 portable radios.

In March, the City of Los Angeles selected Motorola to design and manufacture a new Project 25-compliant conventional radio system for the Los Angeles Police Department. The ASTRO system will be a UHF, 57-channel, digital, wide-area, simulcast system and be specifically engineered for the city's varied terrain.

The Federal Bureau of Investigation contracted in April for 500 new mobile radios that we intend to migrate to compliance with the Project 25 standard. The mobile radios, called ASTRO□ Seneca□, will be designed and manufactured through an alliance between Motorola and Harris Corp. The ASTRO Seneca digital platform will enable a mobile user to incorporate all of the latest and planned future data capabilities, such as remote data base access, imagery transmission, fingerprint identification and position and location tracking. The FBI intends to replace approximately 12,000 radios over the next four and a half years.

During the last year, the Project 25 standard development process has achieved some important milestones of its own. The common air interface (CAI) and vocoder are now published ANSI standards. We are

pleased that groups of users who have been watching the standard's development now have added their support to the ongoing process. One such group is the Australia Project 25 Interest Group that formed in March.

As the Project 25 standard continues to evolve, Motorola is continuing its work to develop compliant technologies.

We introduced Project 25-compliant integrated voice and data systems with the IP interface last year. We completed the development of technology that meets all of the mandatory suites for Project 25 conventional systems. We are working on a number of optional suites, including encryption, encrypted data and simulcast. In fact, of the many elements included in the encryption suite, only over-the-air-rekeying (OTAR) remains, and we are working on that technology now.

We have discussed possible Project 25 Phase II activities were discussed with individual users and user groups. While it is unclear what features and capabilities users might want to consider in any Phase II activity, work would build on that done in Phase I. Some of the capabilities users are thinking about range from additional spectrum efficiencies and new standard interfaces for consoles and base stations to new features including subscriber inhibit and wideband data.

As everyone involved in the Project 25 process looks back over all that has been accomplished, we can share a tremendous pride in our achievement. The digital communications standard, the technologies to support it, and the systems public-safety users wanted that used them have come together. The result is public-safety professionals now have the systems they knew they would need to manage the challenges of the 21st century.

FleetNet☐ is a registered trademark of Manitoba Telecom Services (MTS).

umm I posted a whole bunch I had found. they are:

Hmm... I was looking around more. The same thing happens if you start up
with 2+9+TRUNK and keep them held down as you start. (First "-loAD-" then
this:)
TRUNK
M
Ct -- ---
HOLD

Here's another (new?) one:
Start up w/ 2+9+HOLD
You get "-loAD-" and then the scanner deletes your frequencies and replaces
them with new ones:
Nothing in bank B, but bank a has these:
Ch-Freq
1 144.000
2 144.020
3 144.040
4 144.060
It continues, with this pattern, all the way through bank A, finally putting
153.980 in channel 500.

And yet another:
Start up w/ 2+9+SCAN
Same load screen as before, deletes freqs and replaces w/:
Bank A:
Ch-Freq
1-30.050 51-29.000

2-40.840 52-512.000
3-49.900 53-500 empty
4-138.150
5-162.400
6-173.225
7-406.875
8-453.250
9-511.9125
10-108.500
11-118.800
12-127.175
13-135.500
14-29.000
15-54.000
16-806.000
17-857.200
18-911.500
19-954.9125
20-1299.9125
21-216.005
22-50 empty

Start up w. 2+9+E
Starts up as a ³screen test² with everything on the screen ³on.² Is this a gateway to other things? Maybe. Pressing other keys will get load screen and scan more freqs built into the scanner. Needs more testing. Might clear all your freqs.

Start up w. 2+9+0
Same screen test and load screen as 2+9+E. May, however have another set of freqs scanned, diff from 2-9-E. Probably clears your freqs.

Start up w. 2+9+. (two and nine and period keys)
Unexplained screen starts up with H. Pressing any single key does nothing, except for DELAY. Hitting this will toggle between the H and a L. Might clear your memory, might not. No idea, as I clear my memory between tests.

Start up w. 2+9+3.
Appears to do the same as 2+9- clear your memory.

Start up w.2+9+4.
Does something. No idea, just weird onscreen codes. Someone should experiment more.

I tried the TRUNK - S/S thing on mine and the same thing happened to me . light was on and screen was blank. I looked briefly in my owners manual and it doesnt mention anything about that. i'm not positive though. I have YAESU VR500 scanner that has a cool feature on it. whenever you touch the keypad or turn the tuning dial, the light comes on for a while, which i think would have been a cool feature for the PRO 94. later

620. PRO94A

Yahoo group: pro94owners

From: elliston@ix.netcom.com
Topic: 620 Message: 620

I've been reading here for several weeks about the upgrade. It appears that the only real difference is that the 94A can scan conventional and trunked systems at the same time, and there are some differences in the backlight.

It's been my experience that the Pro94's ability to scan multiple trunked systems at the same time isn't very useful, because it takes so long for it to move from one system to another. By the time it gets back to what I was really interested in, the action is usually over. I find myself listening usually to either one conventional or one trunked system at a time. This reminds me of the first conventional scanners that had hundreds of channels. Most of us found ourselves listening to the customary 16 or 20 channels most of the time.

Let's face it. The Pro94 is not a very good beginner's toy. Most of us who enjoy the Pro94 graduated up from an earlier trunking model, such as the Pro91. I kept mine, and I really believe the Pro91 is a more sensitive receiver. One great advantage to this pair is that they perform very well side by side. Gone is the old mutual animosity that caused earlier scanners to lock each other up when placed side by side. I assume this is one of the benefits of "triple conversion." Anyway, whenever I want to listen to trunked and conventional at the same time, it works fine to get out the Pro91. If both talk at the same time, either has a conveniently located volume control. The bottom line is that I really don't perceive a need to let the guys at the repair center poke around inside my Pro94.

Hey Jayson...

Might not want to advertise that you want to try to unblock the cell frequencies. Any federal types on here might want to talk to you about that. It's a violation of federal law to try to modify your radio to receive those frequencies, plus new radios are designed specifically to prevent you from being able to do just that.

Richard,

I have the pro-94 and for me it works great. Where i live they use the use the EDACS system. I don't know how good it works on Motorola. The pro-92 can scan both trunked and conventional at the same time while the pro-94 can do only one system at at time. To me thats no big deal, i would rather listen to one system at a time. You would think you would miss allot listening to both at the same time as it would take to long to go thru all the banks. When i am home i hook it up to a ext. speaker and a magnet mount antenna and it works just as good if not better than my base scanners. When it was on sale i think it was $199.99.

637. Any more tricks yet?

Yahoo group: pro94owners
Date: 2000-12-13 16:08:57 UTC
From: crh@turbont.net
Topic: 637 Message: 637

Has anybody come up with anymore keypad tricks yet? Or even any mods for that sake since the last posts? I'm mainly looking to unlock frequencies (wherever they are) or improve the performance of this scanner. I'm not really interested in more channels, as I can't fill 1000 up here in new england no matter how hard I try. 800 maybe, but not 1000+. I'd love to unlock the 225-406 range.

Also since the e-groups site seems to bog and it takes me 10 minutes to go from one message to another could somebody e-mail me the complete list of keypad tricks found so far.

Thanks

Chris

Violate Federal Law, now that is very funny after what we've witnessed in
Florida over the last 5 weeks.

I confess, I voted for Bush, but now am sorry I did has I'm sure we'll see
more "Misschief" over the next 4 years.

You can't find 1000 freqs in New England? Here in Denver, I've been able to fill up all 20 banks with trunk systems and then with air,rail,ham,media,forest/parks,federal,etc. About 300 just public saftey. Then I filled up the rest of it with low power freqs. So, I need another scanner for the 225-406 range.
You actually have it better out there on the East coast with maritime, more military, and fed freqs. Have you tried looking for some of the 400Mhz and 900Mhz trunked systems? I wish I had all the freqs you have.

>Also since the e-groups site seems to bog and it takes me 10 minutes

Ok, by that I mean frequencies within receiving range..... I could fill all
1000 frequencies with just New Hampshire frequencies but 90% I couldn't pick
up, even with my discone hooked up to it. I can only dream of picking up
maritime as I'm on the west side of new hampshire and the only "listed"
trunked system in new hampshire is manchester which is out of range.....
Yes, I'm in the sticks.

I have gotten a Pro-94 scanner for Christmas and don't need it.. I have too many handhelds on hand.. If any anyone is interested in buying a like new pro-94 with the antenna, leather case, and rechargeable battery please email me at buckent@....

I also have a large selection of hand held and desktop scanners that are Trunk or
Cell capable. Email me with your interests and I'll try to find what you are looking for...

Asking $185 + shipping or best offer for the 94,paid by postal money order.

Thanks!

Matt

653. backlight

From: Chris Hartzell
Topic: 653 Message: 653

Ok, here's one for you guys. Is there a way to keep the backlight on while scanning. I'm not talking about the illusive flashlight trick, I actually want to scan with the backlight on. I drive around a lot at night with the scanner on and hate to fumble for the light button every time it stops on a channel.

Chris

Haven't heard of one. Someone had a schematic of the scanner (who was that?). I'll bet there's a driver transistor or something running the LEDs for the backlight. Perhaps a hardware solution (a switch or something) could be used to turn on that transistor.

655. PRO-94 Parts

Yahoo group: pro94owners
Date: 2000-12-21 22:42:52 UTC
From: WeatherAlert@aol.com
Topic: 655 Message: 655

Hi All!
I have recently contacted Radio Shack, and they told me I can purchase the following parts from the service centers, for my scanner, since my scanner, went through some "trauma". However, I will get nickled and dimed to death terrible at Radio Shack, so much that they wouldn't even give me prices over the net, I assume, so before I call, does anyone know where parts for the PRO-94 Scanner (and I contacted Uniden already--no luck), can be purchased? I need a keypad and a plastic display cover.

Thanks Again,
73's
Josh

The key is not to try some fancy scanner altering ultra-complicated magic
trick but to simply use some common sense. Get some sort of external
light to shine on the display and not to risk damaging ones scanner.
Sort like NASA spending a million dollars to invent a pen which would
work in zero-gravity while the Russians just used a pencil. The old
K.I.S.S. principle.

Not a bad suggestion earl but I thought of that already and forgot the same thing you are forgetting. At night if you shine a light on a lcd panel then you might as well not shine the light because you can read the display better in the dark. The light totally blanks the numbers to your eyes. Don't know why, just a freak of nature I guess. It works if you're looking at it dead on, but the way I mount it in the jeep it's not right in front of me (for obvious reasons)...

From: Magood
Topic: 653 Message: 658

Yes it is a pain to not have a constant back light and direct lighting is hard to read . The way to overcome the problem is to mount something small like a red clearance light above your scanner and for the most part it as readable. I run both a pro 2026 and a pro 94 in my truck normally running at the same time. yes the 2026 is easier to read at night but even the extra light my red light gives out helps me see the keypads as well as read the display on my handheld which is mounted at about 6 inches above seat height in the center area making it easy to read and operate the keys while driving. However I can't wait for the new 780 to come out as I do prefer the larger LED readouts Yea I getting older and blinder

To answer your question Chris there is a way on the 94 to have the
backlight come on it doesnt stay on to save battery power but when it
does hit an active freq it comes on for about 3 seconds...

Its really simple and you dont need to spend millions of Nasa dollars
to do it... just press and hold the keylock/backlight button and turn
on your scanner. you will see the display: On Aut lit IF you see
OFf Autlit just shut it off and do it again...

662. The So-Called Pro-94A Upgrade!

Yahoo group: pro94owners
Date: 2000-12-24 22:21:19 UTC
From: vff8@hotmail.com
Topic: 662 Message: 662

If you will wait till after X-mas, I will have information on the Pro-94A upgrade that everyone is talking about.

I visited my favorite Rat Shack store here in Melbourne Florida and have this bit of information to pass on.

According to the manager, the upgrade on the Pro-94 only applies to a specific problem in certain areas (locations). It DOES NOT provide anything new nor does it take anything away from the current design.

You DO NOT need to upgrade the scanner for the sake of upgrading. You will be wasting your money. According to the manager, it will only apply to certain areas in the U.S.

As soon as the manager supplies me the information that he has received from cooperate office I will be happy to post it.

In the meantime, hold off on upgrading your Pro-94 (as I did) until what this document says.

I talked to the Shack 3 weeks ago. There is no upgrade from the
factory as the PRO-92 has. End of story.

If the PRO-94a goes on sale I may jump, Because my PRO-94 works just
as good as my 245. I travel and program the PRO-94 before I leave
home, Don't leave home without it..

The major difference is that the 94A can scan conventional and trunked frequencies simutaneously. I do believe the 94A has a constant backlight function, but am unsure of this so don't quote me on it :)

Ed

Simultaneously as in paralell? Or as one function? I guess the question
becomes - what CANT the 94 do that the 94a can.

Why would you want to do both? Whenever I scan multiple banks in the trunked mode I miss to much of what is going on in the other banks. I assume that you would have the same problem scanning both. If you really want to scan both at the same time why not go to a pawnshop and pick up a used 200 channel Bearcat? KISS.
The feature that I wish That the 94 had was an alphanumeric multi line display. This isn't a big deal here in though, what does it take to memorize a few talk group ID's?

-
> Chris:
I read your question about the backlight, and I'll add a suggestion. If you're familiar with the famous (infamous?) product known as the Pocket Gameboy Color, you'll know about the aftermarket item that I think they call a Snakelight. It's name suggests its purpose, and it does a great job of illuminating the Game Boy. It costs about ten bucks.
Take a look at the external power outlet on your Pro94. There's some extra space, covered by a blank, which I assume is used by some other outlet or a larger power plug for the Pro94's Uniden Bearcat cousin. The bank could be easily removed. With a Snakelight, a little internal wiring, a plug and socket of your choice (from RS of course), I think the problem can be solved. I think you'll need a resistor or two to correct the voltage, but some of the other guys will know more about that than I do. I'm sure they'll add their suggestions. Be careful not to defeat any features that protect your Pro94 from reversed polarity or the recharging of alkalines!
Now the lawyer in me comes through. If someone tries this, and it works, don't get industrious and try to market the procedure. Keep it to yourself. We're talking about modifying several patented products. Modifying and reselling them is probably infringment. It's hard to listen to your Pro94 in Federal Court!

671. Pro94 -vs- Pro92

Yahoo group: pro94owners
Date: 2000-12-29 01:05:11 UTC
From: ibugz@yahoo.com
Topic: 671 Message: 671

Hello,

I bought Pro92 as a gift for a friend of mine not knowing much about scanning. It's a Pro92A, which I got for $199 on sale in Radio Shack. It's no longer on sale; however, Pro94 is. Which is better? I am going to see my friend after the New Year's, so if Pro 94 is much better, I might as well exchange my Pro92 for it. I know it has 1000 channels as opposed to 500 on Pro92. But I am more interested in performance.
It's going to be used primarily in Nassau county, Long Island, NY. The person who it is for is not a scanner enthusiast yet, it's going to be his first scanner.
Any advice would be appreciated,

Thank you,

Nadya.

> Why would you want to do both? (Scan Simultaniously)

Take This Example For Instance - You Have A Situation Where The Police Are Engaged In A Multi-Jurisdictional
Chase - 1 Agency Has Trunking (City Police) The Other Doesn't (State Police) How Do Follow It ?

>Whenever I scan multiple banks in the trunked
> mode I miss to much of what is going on in the other banks. I assume that you
> would have the same problem scanning both.

Yes , Most Times If Your Systems Are Busy , Or Scanning Multiple Agencies , But If It Was An Option ,
Like On The 94A Then Why Not Have It Available ?

>If you really want to scan both at
> the same time why not go to a pawnshop and pick up a used 200 channel
> Bearcat? KISS.

I Had Originally Bought A Pro90 When They First Hit The Market , Only To Have It Become Obsolete
Upon The Arrival Of The Pro94 & BC245XLT Less Than A Year Later..... I Still Have It & Occaisionally
Take Both (90 & 94) With Me In The Car (1967 Chevelle Malibu !) , But Find It Is Awkward To Fidgit With 2
Scanners While Mobile , The Logistics Of Batteries Is Challenging , & Trying To Conceal 2 Scanners While
Trying To Act Normal In Public Is Out Of The Question - A 94A Would Be Great (But No Upgrades - I've Tried)

> The feature that I wish That the 94 had was an alphanumeric multi line
> display. This isn't a big deal here in though, what does it take to memorize
> a few talk group ID's?

When I Visit My Parents In Georgia , I Find A Unique Situation Amongst The Various Local
Agencies I Scan Down There - There Might Only Be 4 - 8 Channels Delegated Amongst The
10 - 20 Agencies In The Counties Surrounding My Folks Place In The Country - So They Use
CTCSS Codes To Differentiate Users - A Person Monitoring Them Using Older Scanners
Could Pick Up 2 - 3 Users On The Same Freq , But Only After Extended Monitoring Could
You Tell The Different Jurisdictions . With Alpha-Tags , You Can Easily

Lable Each User
With Their Own Unique CTCSS Code ,.Thus Cutting Your Time To Learn Each User
By 500%.

If You've Found A Bunch Of Trunk Freqs Listed In The Police Call Book , &
They Aren't Active - There Are 6 Possibilities
You Could Assume - 1) They Will Become Active In The Future.
2) They Have Become Abandoned For Other Freqs.
3) The System Is Digital
4) They Are Currently Active & You Are Unble To Monitor Them In Your Current
Location.
5) You Haven't Properly Programmed The Freqs Into Your Scanner.
6) Your Scanner Isn't Trunk Capable

Man , I Wish I Had A Friend Like You Nadya ! Nobody Has Ever Given Me A
Scanner , But Everyone Knows I Love Scanning . All I Get Is Ties , Cologne ,
& Cards :-(Is It Me Or My Friends ?
As A Scanner Dude , I Would Keep The Pro 92A Over A Pro94 If I Had Bought It
First , Esp For $200.
If I Had Bought A Pro92A As A Gift , Was Into Scanning (Which You'll Both
Soon Be) & Wanted A Scanner Myself-
And No More 92A's Were Available , Then I Would Keep The 92A & Give The
Pro94. If The Pro94 In Question
Were The Elusive Pro94"A" - More Than Likely , Cause I'm Lazy I Would Get
The 94A & Give The 92A.
Programming The 92A , Open / Closed Mode , LTR Early Unmute & Such Makes Me
Woozy Just Thinking About It.
Hey Nadya , Can We Be Friends For Next Christmas ;-)

Happy New Year , And New Millinium !!!!!!!!!!!!!
Scanning Till My Giga Hertz.....

Re Pro 92 VS Pro 94:

It depends on what you are going to be listening to. I lived on LI till about 1990. I remember that Suffolk had a boat load of Freq's to scan. At the time I only had a 10 channel scanner. I was an EMT for one of the Rescue Squads out there. All I had in there were the 10 most important Freq's for my district.

When I left NY I moved to Washington DC. I used my scanner mostly to avoid traffic during my drive to work. There I commuted from Downtown DC to Bethesda MD. That meant that I had to travel through several jurisdictions every day. I would go in to VA from DC then in to MD. This made scanning a nightmare. I had a friend give me a 200 channel scanner. This was around the time that they were switching to a trunked system. So my friend If you Live in eastern Naussa Co and commute to the city you proabally be better off with the 1000 channels reguardless of the features.
If you just want to listen to Nassua County then 500 would be plenty.

The 92 has an alpha numeric display and I think it can both trunked and conventional freq's at the same time. I would take 500 more channels over the alpha numeric and dual scanning any day. They both can track all of the major trunk systems.

I carry my scanner around with me like a little kid and his blankey. I take it with me in the car all the time and keep it at work all day. I work in a different county than where I live. So I am set up to switch banks when I cross the county line. If I can ever get the TX Dept of Public Safety freq's I would put the entire state's network in my scanner and just scan them when I got out of my city limits.

You have a ton of freq's up there to use and listen to. If you travel through out the NYC Metro area you proabally need the 1000 channels more than anything else. If you lived out in B.F.E. you proabally could get away with a 4 channel crystal scanner. You will run out of space before you run out of freq's.

Good Luck, I hope I helped you out.
Larry

My only disagreement is with the description of the Pro-94 as a □1000 channel scanner.□ Folks, it may have 1000 channels available, but you can only scan 500 at a time, so the Pro-94 could be more accurately described as 2 separate 500-channel receivers in the same box. If you need to monitor 1000 channels at one time, all I have to say is, God help you. I don□t think I have more than 300 channels loaded into my Pro-94 before I got tired and let it ride. I normally listen to 4 trunked systems on the Pro-94 and I use my Pro-90 to monitor about 40 conventional channels, and that□s it. I sure would like to be able to monitor both conventional and trunked systems at the same time, so I□ll probably end up getting a BC780 in the near future.

Re Pro 92 VS Pro 94:

It depends on what you are going to be listening to. I lived on LI till about 1990. I remember that Suffolk had a boat load of Freq's to scan. At the time I only had a 10 channel scanner. I was an EMT for one of the Rescue Squads out there. All I had in there were the 10 most important Freq's for my district.

When I left NY I moved to Washington DC. I used my scanner mostly to avoid traffic during my drive to work. There I commuted from Downtown DC to Bethesda MD. That meant that I had to travel through several jurisdictions every day. I would go in to VA from DC then in to MD. This made scanning a nightmare. I had a friend give me a 200 channel scanner. This was around the time that they were switching to a trunked system. So my friend If you Live in eastern Naussa Co and commute to the city you proabally be better off with the 1000 channels reguardless of the features.
If you just want to listen to Nassua County then 500 would be plenty.

The 92 has an alpha numeric display and I think it can both trunked and conventional freq's at the same time. I would take 500 more channels over the
alpha numeric and dual scanning any day. They both can track all of the major
trunk systems.

I carry my scanner around with me like a little kid and his blankey. I take
it with me in the car all the time and keep it at work all day. I work in a different county than where I live. So I am set up to switch banks when I cross the county line. If I can ever get the TX Dept of Public Safety freq's I would put the entire state's network in my scanner and just scan them when I got out of my city limits.

You have a ton of freq's up there to use and listen to. If you travel through out the NYC Metro area you proabally need the 1000 channels more than
anything else. If you lived out in B.F.E. you proabally could get away with a
4 channel crystal scanner. You will run out of space before you run out of freq's.

Good Luck, I hope I helped you out.
Larry

Heh. I remember the feeling of nearly unlimited possibilities that overcame me when I first started programming my Yupiteru MVT-5000 with its 100 [!] channels.

At that time and place, (Geelong, Vic, Australia, 1993) I was only able to fill about 45 of them.

Times have changed; I have a '94 about 1/4 full and an AOR 8200 that is about 70% loaded now, but I can't imagine trying to scan more than a tiny subset of those frequencies at any one moment. Better several cheap, lower-capacity receivers scanning independently than one garganturig visiting each frequency once every 30 seconds or so.

I'd stick with the pro 92A. It has the alpha-tagging and can scan both trunked and conventional at the same time. Also, you can only scan 500 of those 1000 channels at a time. I'm actually thinking about trading my 94 for a 92A.

>Any advice would be appreciated,

I have both (94, 92B). I use both of them, because they do different things in different ways.

Pro-94: it hears and tracks systems that my 92 doesn't hear. If I have more than one collection of talk groups that I want to be able to monitor on a given system, it has 5 sets of talk groups that can be turned on and off with a single keypress. And of course, it has two banks of 500 channels each. It is also possible to tell at a glance whether this receiver is hearing the control channel. There are other little features that add up.

Pro-92: it does trunked/conventional scan, has alpha tags, and computer control. That feature is worth a lot. It can also decode/display PL tones and suppress channels with the wrong tone.

Advice worth what you paid for it...

Likewise for me as well, I find each has it's pluses and there isn't any one scanner that can equal what two scanners can do at the same time.(All are a long way from the $100+ one channel crystal controlled converter to AM slope detection I had in my new 1962 Falcon Wagon, 155.01 MHz, Tucson PD) OK back to 2K!

683. AC adapter trouble

Yahoo group: pro94owners
Date: 2000-12-31 21:05:01 UTC
From: Mugsy Smith
Topic: 683 Message: 683

Hello all
Ive had my 94 for a year now and love it.
I just went to the shack and got an ac adapter and four
rechargeable Nickel-Cadmium Batterys for the radio.
When I got home I installed the batterys and flipped the switch
to ni-cd. Set the adapter to 9 volts and - tip polarity.
When I turned the radio on It did nothing the screen was blank.
Any input would be appreciated.

Make sure that the Negative (-) pic is lined up with the "TIP" indicator on
the adapter end.

I have a universal adapter at home that does that. What is going on in my case is that either the tip isn't the absolute correct size or the inside pin on the scanner is bent because it fits real loose and the next size up is too big. So what I do is route the wire to the back of the scanner, pull till it's snug (key word: snug) and wrap it around the belt clip. That seems to do the trick.

ps. what do you guys think about using a satellite dish as a directional antenna in addition to a normal antenna when used as a base unit?

Chris

I got my pro-94 last year for Christmas. When I bought the wall wart, the salesman gave me a "special" tip at no charge. He said the 94's were a little different and they were told to give it out. I haven't had any problems with it so far (knock,knock). Maybe you need the right tip. I know it sounds crazy but we are talking about Radio Shack.....

If the connector is active, could it mean that the Pro-94 can be programmed
using ScanCat Gold software in my computer, thus saving the whole hassle of
programming everything manually, especially every time the scanner CRASHES?

That would be nice, wouldn't it. Nobody has figured out what the connector does. Perhaps it is used only for factory tests, but I personally don't think so. Those tests usually just use contact points on the circuit board -- a connector is too expensive for a one-shot test. Perhaps it was meant for a feature that was left out of the final design, but I don't think that either. Again, if that were the case they would omit the connector and save a few cents. If anyone gets a service manual, maybe we can at least find out what the connector connects to.

I agree, heavy duty computer-controlled scanning is probably better done with a desktop radio. However, a way to load the channels on a handheld is very nice, even if no other form of control is possible. (That's what I had on my Pro-64.)

Topic: 701 Message: 702

I discone is a very good choice of antenna. However I have a system that I monitor that is only 25 miles away and it comes in, but very bad. So 50-60 miles would most likely be pushing it. Also my terrain is mostly very hilly so there is another factor in your favor.

Now what I am about to suggest aren't scanner specific antenna but work very well for directional use, and ONLY directional use. You can hook up a DSS dish to your scanner or a yagi beam type antenna. Both these designs are said to work really well, but if you want to monitor more than the area you are pointing them at you would need to set up some sort of dual antenna system. One directional and one omni-directional fed to a splitter and back down to the scanner. Plus you would probably have to add a pre-amp at that point.

Chris

Topic: 706 Message: 706

First of all, I Just got the pro-94a. This is my first scanner experiance so I don't know a lot here. Have suceessfully entered a couple of Mot Type II systems, and so far I am really happy. The manual leaves alot to be desired though. A couple of questions
1. The San Diego County system (Motorola Type II) apparently uses on the order of 77 frequencies. Do I use two banks? If I do, do I have to enter the Talk Group IDs into lists in both banks? Or is a talk group always assoceialted with a specific frequency?

2. When scanning multiple trunked banks, and the scanner stops on a conversstation, it there a way to determine which bank it is on? Seems I only get the talk group ID and nothing that determines the bank. Some of the same IDs are used in the two systems I have already programmed

3. How does one know which of the two functions associated with a button on the keypad is the active function that will be executed. Since there is no Shift key, It must be totally "context sensitive" that is, the function is determined by the mode the scanner is in. Seems there should be some sort of chart for this. Anyone seen anything like this? (Note: I have only read the manual ~5 times, so maybe another 5 times will turn on the light)

I'll probably have several more questions over the next month or so as I get more familiar with scanning.

Thanks
Jeff

You might consider some sort of very directional antenna. There's no point trying to receive signals from other directions if you know exactly where the target system is located. I believe there are 800 MHz Yagi antennae available.

First of all, I Just got the pro-94a. This is my first scanner
experiance so I don't know a lot here. Have suceessfully entered a
couple of Mot Type II systems, and so far I am really happy. The
manual leaves alot to be desired though. A couple of questions
Jeff, congratulations and I hope you enjoy your scanner.
1. The San Diego County system (Motorola Type II) apparently uses on
the order of 77 frequencies. Do I use two banks? If I do, do I have
to enter the Talk Group IDs into lists in both banks? Or is a talk
group always assoceialted with a specific frequency?
You may want to go to http://www.trunktracker.com/states/ca.html#San Diego1
and check what area of San Diego county you live in. Then, just enter your
area in one bank, and the other part of the county in a different bank.
But, yes, you do have to use 2 banks, since there are only 50 channels
available in each bank.
2. When scanning multiple trunked banks, and the scanner stops on a
conversstation, it there a way to determine which bank it is on?
Seems I only get the talk group ID and nothing that determines the
bank. Some of the same IDs are used in the two systems I have
already programmed
Press the □ALT□ button and it will show you at the very top of the screen
which trunked banks are active, and the current trunked bank will flash.
3. How does one know which of the two functions associated with a
button on the keypad is the active function that will be executed.
Since there is no Shift key, It must be totally "context sensitive"
that is, the function is determined by the mode the scanner is in.
Seems there should be some sort of chart for this. Anyone seen
anything like this? (Note: I have only read the manual ~5 times, so
maybe another 5 times will turn on the light)
Yes, it is context-sensitive, although sometimes some keys you press and
hold for different functions, and others you simply press. It□s all in the
manual.
I'll probably have several more questions over the next month or so
as I get more familiar with scanning.

Thanks
Jeff

No problem, bring □em on.

Look at the 60 frequecies. if they start 8xx.xxx use E2 800, if they
start 9xx.xxx use E2 900, if they start 1xx.xxx use E2 Hi, and if
they start 4xx.xxx use E2 UHF. I am not totally sure on the frequecy
band on the Hi and UHF, but most systems are up in the 800 or 900 MHZ
bands. I am branad new to this last week as well, but have 4 trunked
systems programmed successfully. Good luck
Jeff

Has anyone come across a RadioShack policy of not giving a refund for, say, the Pro-94a which I bought today? The return can only be for a replacement or exchange with mechandise-in-kind.

Found out after some research that our county doesn't get trunking until 2003. Pat

I though they all had a 30 day no question asked return policy. I have heard of them not giving cash on refunds of a $100.00 or more. They send you a check in the mail.

Pat,

Radio Shack has a 30 day warranty that includes refunds. If you paid by cash then it will be refunded by mail from the corporate office in Texas.

On the reverse side of my reciept for my PRO94(A) it has a "Return/Refund policy.

Just tell them that you can't use it and don't want it and they have to refund your money. I live in Maryland and have returned a PRO 92 after almost a month of trying it out and not being satisfied with it's performance.

Good luck.
Bryan.

The Radio-Shack has to return it. They have a 30 day return policy. The first day if you paid with cash they should just give it back. After that they would have to follow their return check request policy since it is over 100 dollars.

Yup - This is more than the discone omnidirectional can hope to achieve.. :-) - a 3-5 element yagi should work great at that distance, with beamwidth tightest at 5 elements.. A DSS type dish won't have any gain at these frequencies, tho'..

723. Pro 92 (20-522) Scanner Update

Yahoo group: pro94owners
Date: 2001-01-11 22:12:50 UTC
From: Viscount Foelker
Topic: 723 Message: 723

Here is some information for the proud owners of the Pro 92 scanner. The information that follows is from a local Radio Shack dealer. This is a notification bullentin that he received from Fort Worth and passed on to me.

Pro 92 (20-522) Scanner Update

After introduction of the Pro-92, we learned of some instances where it didn't perform to expectations on some Motorola trunked systems. Based on this, a few customers have raised concerns about the quality of the PRO-92. First, you can reassure customers the PRO-92 is the best handheld scanner we have ever offered and has had a very low return rate. In addition, a recent update to the software improves performance with these "troublesome" trunking systems.

Effective immediately, we are offering this upgrade for the price of labor only! For only $49.00 installation fee, you can send a customer's PRO-92 to the 40-0804 Service Center and obtain the update. Through cloning, resonable efforts will be made to retain the customer's programming in the scanner's memory. Please note: Only the Fort Worth Sevice Center will be doing the $49.00 update. THe RSS Repair shipping address is: RadioShack Service 40-0804,2516 NE Loop 820, Fort WOrth, TX 76106.

If your PRO-92 customer wants the update, first verify the radio's software version. To do this, just turn the unit on and, while it displays "Welcome to...", press the 3 key. The orginal 20-522 software is version 1.00. The 20-522A and 20-522B models use 3.xx versions, which already has updated trunking alogorithms and doesn't need the update.

Don't send a scanner that currently works fine on your local trunked system just because it has version 1.00. IF the scanner already works well in your area, this update is not needed. Please don't let a customer pay $49.00 to later learn that the scanner works the same as it did before the update.

There it is. Those of you that are affected and want this service, go to your local RadioShack store. REMEMBER! Don't upgrade for the sake of upgrading, you could be wasting your money.

About the PRO-94. I am still waiting for information about the upgrade on it. There was some reason when the PRO-94A came out. Seems to me, someone discovered something it wasn't suppose to do, so Rat Shack came out with an update. From what information I did obtain, stated that it applied to the Motorola systems. Hummmm.... As soon as I get this information I will pass it along to all the Pro-94 users.

Any questions concerning the information on the PRO-92 upgrade, the information IS FROM THE ACTUAL BULLENTIN RECEIVED BY THE MANAGER from my

local RadioShack store.

Good luck!

Hello,
I have a question...can I "unsubscribe" to this group
and still remain a member of the group. I'd prefer
NOT to get the emails sent directly to me, but I'd
still like to have access to the messages at the
eGroup site...is that possible? Thanks.

Tom,
Just go to your Radio Shack store and look on the back of the box of the PRO 94. It has a little white sticker that should read "05A00". This number or higher ie. 06A00,07A00 will yield a PRO 94(A)!!! My local stores had several 04A00 and prior units. These are first generation 94's. You'll be pleased with the radio as opposed to the first generation 94. Keep looking. It's worth the foot work.

Also, on the rear of the radio, at the top, is the model number 20-524. To the right of this number is a (A) in a little box. This is a PRO 94(A) unit. Also, the same sticker that is on the rear of the box (05A00) will be on the rear of the radio. The owners manual for the PRO 94(A) is shorter in height than the older 94 and on the rear cover page is 20-524(A).

Good Luck!
Bryan.

The Problem at R.S. is not the fact that they are idiots. It's the fact that every new order has 2-10 new products in them and the possibilities of keeping up on everything is almost impossible. I run one of the best Radio Shacks in the mid west division based on performance. I dont know that much on scanners yet because they wont make me the money other products will. So no offense but It's a matter of priorities what they become experts or in somecases semi-knowlegable on first. Like cell phones dth msn computers stereos then scanners.

I did not mean to imply that all RS employees were idiots, I do however remember when you could go to a RS and find at least one employee that kept up with everything this wasnt too long ago. Maybe im biased and hold people to a higher standard since i was the employee i am not saying i was perfect but a lil pride in the job to keep up with things like modifications and such to your line of products isnt that hard...

Saying its impossible and not expecting the best IS like Finding it acceptable if you go to McDonalds ordering a Big Mac And the Guy looks at you and says. "Whats a big mac?

If you cant find highSchool kids that will show this pride then it would be nice for the Managers to take the time to keep up with the product line. And at least making a note and put it in a place were if there is a call about a modification they wouldnt have to look far and at least seem halfway knowledgable.

I know this sounds like a dig on RS its not i know that ya all work hard and you may think that your priorities mean something but a good manager/employee thinks about all the customers not just the ones that will bring them the most money...

My Two cents take them for what they are... ITs not a slam on you or anyone in particular and it doesnt necessarly have to be RS i know several national Chains that if they took the pride and time that Small mom and pop Stores took they would be a lot better off and their customers wouldnt be so frustrated.

Pat,

Just because your area doesn't have trunking yet, Don't forget the PRO-94a is a fantastic conventional scanner as well. I don't have trunking where I live yet, but I travel enough to program systems where I am going. I especially like the AA batery, conventional and Trunk at the same time, and the light for 5 secs when the scanner locks on a channel for low light conditions.

I have 2 245XLT's , a PRO-94 and a PRO-94a I like the PRO-94's much better than the 245's. For me they work great!

My $00.02 worth

Dan

The PRO-94 upgrades are just like the upgrades done to the BC 245xlt in its firmware upgrade. Deletion of the five second delay with Trunking, conventional and Trunking at the same time, and the light will come on for 5 seconds when the radio breaks squelch. I have both and I love them both. The 94a is a definate improvement in functionality, and creature comforts. I am not going to sell my original 94

Well to be honest the only reason I'm on this board is because I sold over 20 of the pro 92's and I know there is a market in scanners. I also know now that the truncking system on my area is vertually impossible to track, and all the good info the police talk about is done on cell phones. I promised some of my customers I'd learn as much as I can in the next few weeks just so I could help them out. Hate to say that I have not learned much outside the fact that the pro-92 is not for the first timer. But it can be cloned. and I have a tech-head customer that is trying to figure out how to clone the 94 for me. RS in the last year has change dramatically though with the three new kiosks and the different promos constantly Its a bear to keep up.

John,

GoTo http://www.egroups.com/mygroups
There you can change your setting to
No mail/Web only
that will stop the emails coming to you without
having to leave the group.Then you can just goto
the web page to view when you like!
:-)
Let me know if you have any problems changing your settings.

> a bit befudled.

I am new to this but it sounds like your in the "search" mode. The canner is searching for Talk Group IDs. Eventually u need to program some TG IDs into Lists. There are 5 lists of 10 IDs that can be programmed per trunked bank. After you have programmed some Ids into lists, then put the scanner in the SCAN mode. Be sure you alos push the trunk button to activate trunked scanning. Once the scanner has aquired the control channel, The display should have a scrolling "...ID SCAN ID SCAN ... and you should be scanning the TG IDs you programmed in as well as any other conventional banks you have activated.

It is confusing. I had the same type problems. Have had the unit a week now, i love it and am kind of getting the hang of how to program it.

Topic: 712 Message: 745

I have been reading all the posts on the 94a and the 94. I am a little confused. I am I understanding correctly that the 94a will trunk and scan conventionally at the same time just like the Pro-2067 and its mobile counterpart? Thanks in advance to anyone who can clear this up. By the way my 94 has a sticker on the back that says 11a99.

You have a first generation PRO 94. It will not scan both trunked and conventional at the same time.

The PRO 94(A) will definitely scan both at the same time!!! Also it has the "Auto backlight" function that the 94 does not have and it eliminates the 5 second delay when scanning various trunked banks and/or conventional at the same time. Plus I think the 94(A) has better reception qualities than the older 94.

Happy scanning!

Bryan.

> a bit befudled.

I am new to this but it sounds like your in the "search" mode. The
canner is searching for Talk Group IDs. Eventually u need to program
some TG IDs into Lists. There are 5 lists of 10 IDs that can be
programmed per trunked bank. After you have programmed some Ids into
lists, then put the scanner in the SCAN mode. Be sure you alos push
the trunk button to activate trunked scanning. Once the scanner has
aquired the control channel, The display should have a
scrolling "...ID SCAN ID SCAN ... and you should be scanning the TG
IDs you programmed in as well as any other conventional banks you
have activated.

It is confusing. I had the same type problems. Have had the unit a
week now, i love it and am kind of getting the hang of how to program
it.

Dan,

I agree that the Pro94 is a great conventional scanner. I too live
in
one of those areas where all public systems are still conventional.
Nearest agencies using trunked systems are about 30 miles away.
Here's an idea you may have already tried. Pardon me if I'm
reinventing the wheel. In our area, one of the Trunked SMR's gives
their service to one of the local law enforcement agenies, presumable
as a way of getting their foot in the door to sell other services.
The result is a "System Two" where the higher ranking officers and
detectives seem to believe that their radio communications are
private. Police call and the directories aren't much help for
finding
the frequencies, but you can go to

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts

and find them for your locality. There are several service codes for
the Trunked SMR's, bu the best one to try is YX. These guys will
usually be a Motorola type I, and E1P8 seems to work best.
Let me know if this works in your area. It would be interesting to
know just how widespread this practice of giving the service to the
law enforecment folks really is.

Being that you are of simple mind I guess you don't read the other messages offered on this site.

I for a fact have a PRO94(A). If you would simply read the last post of mine you will "simply" see the details and "facts" of the true existence of the 94(A). Tom took the info I posted and was able to locate one quickly. See, he is not of simple mind. I suggest you open your mind, get up from behind your computer and take the info provided to your local R/S store and see that the PRO94(A) does in fact exist.

R/S also does not list a PRO92(B) either. That series of radio has gone through 3 upgrades thus far.....

For what it's worth.

Bryan

Harry,

They are out there. You just have to do some finger work. I live
150 miles from Salt Lake City, and I called 8 Radio shacks who did
NOT have them. On the ninth try BINGO, and at $199.99. So I drove
to Salt Lake last weekend and got it.

YOU have to tell the store employee's how to tell the two models
apart, and tell them that if you come to get it and it is not a 94a
that you will not buy it. They work on commission, so they will try
to help you, if they can make a sale.

Go get it.

I purchased my 94A in Stockbridge (suburb of Atlanta). Also check
this site for all of the manuals:
http://www.radioshack.com/ProdSupport/DocumentDetail/DocumentDetailInd
ex.asp
then select Communications, then Scanners. You will see two entries
for PRO944, the original and the 94A.

From: Billy Bearden
Topic: 759 Message: 759

Hello My Fellow 94ers
I Have Been Reading This Board Since Day 1 & It Certainly Has Been Hooping
As Of Recent.
-Harry , Keep Up The Good Work!
-Glen , Keep Those Sharp Replies Coming!
And To The Others-
-Yes , There Is A Pro 94A. Has Been For Nearly 1 Year.
- If You & A Friend Don't Want To Consider A 94 - 94A
As A Scanner Of Choice Because You Don't Live In A Trunk Area , Consider
This;
Are You 99/44/100% Sure ? Have You Checked The 400/800/900Mhz Bands
For Trunking ? Just Because The Police Don't Use It Doesn't Mean That Local
Businesses Don't , Or The Military Bases ...
- Do You Travel ? Doesn't The State Patrol Or Major Urban Areas Utilize
Trunk Systems ?
How About On Vacations ? Places Like Myrtle Beach , Atlanta , New York &
Many Other
Destinations Trunk - Why Not Be Prepared ?
- Speaking Of Preparation , Unless You Are The Mayor Of Your Jurisdiction &
Know For A Fact
You Ain't Spending A Dime On Upgrading Local Radio Equipment , Then It Is
Only A Matter Of Time
Till Your Home System , Or A System Near You Will Switch To Trunk & Leave
You In The Dark.
- If You've Programmed The Trunk Freqs In Your Scanner , But It Only Locks
On Data Channels ,
Sounds Like You Haven't Programmed Them Properly Under The Trunk Mode " RT*M
"
-You Can Put Trunk & Conentional Freqs In The Same Bank - Just Remember To
Lock Out The
Trunk Freqs After You've Entered Them Under Trunk Mode.
- Place Clear Tape Over The Display Crystal To Prevent Scratches
- Keep 2 Sets Of Batteries - On Always Charged
- Try Various Antennas - Stock , 800 Mhz Dedicated , Racing Stubby ,
Telescoping MultiBand.....
- For Great Mobile Sound , Use Your Car CD Tape Adapter Cassette & Plug Into
Headphone Jack.
- To Program A System Of A Jurisdiction You're Gonna Travel To, Enter All
The Target Freqs , Then Enter The
'Data Channel Of Your Local System & Press Search. Then Enter The Talkgroups
& ID's Of Target System.
Finally Remove Your Local Data Channel & Lock Out All Trunk Freqs

764. Pro-94 Performance

Yahoo group: pro94owners
Date: 2001-01-18 01:01:36 UTC
From: John Martindill
Topic: 764 Message: 764

Folks,

I've noticed the same thing that every one else has. I bought a Pro-91 about a year and half ago and at the time I was amazed at what it was able to pick up. I have used the Pro-91 only for conventional scanning. I have never tried to do any trunking with it.

For Christmas, Santa brought me a Pro-92. I programmed the first two channels for conventional scanning and channels 2-8 for trunking around the Dayton, Ohio area. I noticed right away that the Pro-91 would pick up conventional scanning frequencies that the Pro-92 would not. In the Dayton metro area, I'm very pleased with the way it trunks, but when you get 10 to 15 miles away it picks up nothing.

With the traveling that I do around the state, I decided that the Pro-94 would come in handy. It will save programing time and fuss even with the GRE software. I can keep Columbus, Dayton and other communities programmed in without reloading. Last night I got a Pro-94. It has been a very pleasant surprise. Number one it does conventional trunking as well as the Pro-91. Today I had both the Pro-91 and Pro-94 sitting side by side doing conventional scanning. If one picked something up so did the other. The Pro-94 is just as good with conventional scanning as the Pro-91.

Going to work this morning I had both the Pro-92 and Pro-94 on in the car. (The Pro-92 in the window cup holder and the Pro-94 standing in the middle of the front seat.) They both performed equally for the first few miles then the Pro-94 started receiving more than the Pro-92. (They were trunking the same frequencies.) Right now I have both the Pro-92 and Pro-94 on. The Pro-94 is picking up quite a bit while trunking on a 800mhz EDACS system. The Pro-92 is sitting quietly beside it.

I very pleased with the Pro-94A and Pro-91 scanners that I have. I'm somewhat disappointed with the Pro-92B that I have. Both instruction manuals are equally bad. The Pro-94A manual may be a bit worse than the Pro-92B manual.

If you're scanning in a metro area the Pro-92B is as good as they get. If you're in the boonies, the Pro-94A or Pro-91 are much better.

John

You were sent you two excellent places for trunk info. Go to Lindsey Blantons web page trunckedradio.net --- down load Dave Goodson's article on truncking - a must read. Read it and read it again, in my opinion it is the best info on Motorola truncking I have ever read. You have come to a very good site for info, many experts here, and many good tips.

On This note, I would like to ask if you know how to unblock any and all channels on a pro 94. Disclaimer- I have no intention of using this knowladge practically, in the means of illegal usage or the potential thereof. -

I have been looking at my Pro94's circutry and haven't been able to figure it out. I see this as a way to expand my understanding of electronics, as I only have a basic Background in this area. I feel it would not only be interesting to know how to do this, but it would also fill in some blanks I have been working on.

Thank you.

Recent regulatory changes in the USA have made it impossible to gain government permission to manufacture and sell a receiver that is modifiable by any simple means for reception of the analog cellular telephone frequencies.

This means that someone who wishes to modify the PRO-94 for this purpose faces a task that might mean finding a way to replace the entire processor and firmware, or removing and replacing some major components. The days of magic keystrokes or simple diode or resistor removal/installation are gone, at least as far as new equipment is concerned.

For example, Icom's IC-T81A multiband ham transceiver had a Vulcan Nerve Pinch one could apply to the keyboard to cause the receiver to open up to a much wider range of frequencies (not including the cellular band). However, because someone noticed that the image suppression in the receiver was not adequate and it was possible to overhear cellphones while tuned to frequencies outside the cell band, Steps Were Taken. Later copies of this unit no longer have wide-band receive capabilities that can be enabled through the keyboard.

Obviously this was ment as consumer protection. However I disagree that 'consumer protection through Regulation" was justified in this case. Routine Scrambling and encrypting of cellular phone transmission would have been much more practical, though i'm sure the big companies lobbied against it. Any ideas if the bands willbe opened up again when 90% of cell phones become digital (instead of the 33-50% now?)

But can't you still listen in if you have an amplifier powerful enough to push the harmonics into audible range? This is ludicrus. Freedom through Regulation isn't a policy I like.

I'm looking at being able to listen to as much of the soectrum as I can. I can see regulations on transmitting, but as long as you can build a reciever, there should be no reason why you can't listen.

>Obviously this was ment as consumer protection....

To me, it is obvious that this was meant as retrospective protection for large corporations who did not wish to spend the money to make their products minimally secure.

It also protects [har!] politicians who are indiscreet whilst yackking on cellphones.

Sorta.

<geezer>
When I worked at the first Radio Shack store in Kansas City, in 1968, I was demonstrating the "Patrolman" AM/VHF receiver to a customer. Looking for the KCPD, I happened to tune past the Mobile Phone frequencies. There I heard a voice I recognized -- a friend who was a big shot on the Jackson County Republican Committee, discussing tactics with someone who was wealthy enough to have one of those 75-pound CarPhones in the trunk of his car.

I took some notes. The customer lost interest and went elsewhere. My friend hung up. I called him. I said "Y'know, you really shouldn't discuss sensitive matters on an insecure circuit." He said "Huh?" or words to that effect. I described my intercept of his conversation. He scoffed. I suggested that he call his crony back, and I would see what could be heard.

He did so. I did so. I took notes. I called him back, and repeated the conversation almost verbatim. He was mortified. 30+ years later Republicans were still pulling the same foolish stunts. We are all the poorer for it.

I have decided that you must be a Pro to understand the manual and then execute the instructions. The guy who wrote the book must also work for the IRS! I had decided to NOT do my income tax this year due to their horrible GREEK but now after studying for hours looking at my manual for the pro94, and finally being able to understand it and follow the instructions at least a little....why I'm going to do my income tax this year all by my self!!! And by the way--- I like my scanner. I'm not plum a fool about it but I like it. I'm not sure it's worth $200.00. I agree, it is a shame we are sold something with frequencies and part of them blocked out. Big damn deal, cell phone calls. It makes no sense which is par for the course to allow us to monitor the cordless phones and not cell phones. Did I miss something here about cell phones.....do you talk differently on them from the cordless phones? When you use one do you have to be nice on a cordless and talk Sunday school etc.-- and on Cell phones talk dirty and divulge top seceret messages? Man o' man this is par for the course it seems.....senseless crap. There has been enough money spent seeing to it that we do not monitor certain freqs. to feed a small starving country. Excuse me while I go glue myself to the old scanners w/cell phone conversations....just kidding, just kidding. I promise to never listen to cell phone calls, only cordless, I'm delicate and can't stand those horrible cell phone conservations. This pro 94 is not sensitive enough with out using an outside antenna to pick up cordless phones anyway unless maybe just across the street; and I'm not interested in knowing about how much child support the gal is getting and whether or not she's having her tubes tied. Please!!!

Well, I am a "High School Kid" I like to think of my self as up-to-date with quite a bit of knowledge of the newer, and older, electronics that are out. By no means do I know Everything, but I know a very good amount. It seems that to get a job at RS you have to be 18 to work the floor. And 17 to stock the floor (this is what I gathered when talking to my local RS managers). I would love to work at RS, but no one seems to want to hire me. After going to several RS's in the area, they all said "No". That makes me wonder if they really want people to work since ALL of them had now hiring signs up in the windows or on the counters.

Does anyone happen to know if RS has a minimum hiring age?

Also, on another note... I am *TRYING* to get my Ham Radio License, anyone know a good site to check out for info on what might be on this test so I can study for it ? :)

Just wanted to share my thoughts, and ask a few questions,

Thanks,

Jim

784. RS magmount & military airbands

Let me recommend the RS magmount - it'll get a lot more than the standard duck inside the car!

And to Tony, wishing he could receive the military airband - look around for a Sony ICF-SC1 handheld - if you can find one used on the net, you'll get it for a good price and it picks up all that stuff. It's really screwy to program, but works well and has 300 channels.

As for you trying to get a job a RS and being 17 I have no Idea. I manage a RS I have a 16 year old girl working the floor I have also had an assistant manager that was 17. Technicanly to work at radio shack under the age of 18 you either need to be in a high school work program or already be a high school grad. It really depends though on the district managers. Which my DM is a stupid ass and didnt know he hired a assistant manager that could not open or close the store.

786. Scanner Ethics

Yahoo group: pro94owners
Date: 2001-01-20 16:44:43 UTC
From: elliston@ix.netcom.com
Topic: 786 Message: 786

The Pro94 has several features that make it the scanner of choice for tackling one of those trunked SMRs that seem to be popping up everywhere. Here's a dilemma that should strike up some "spirited" conversation. The situation set forth hereinbelow is hypothetical, and any ressemblace to any real world situation or persons is purely coincidental. (Grin now.)

Let's assume that we have successfully tackled one of those SMR's and found a wealth of "interesting" talk groups - plumbers, exterminators,
heat and a/c repair, etc. The real prize, however, is that local law enforcement talk group, where it's readily apparent that they think no
one can listen. Maybe the SMR folks have led them to believe it's encrypted. Like any responsible scanner enthusiast, we have decided to keep our ears open and OUR MOUTHS SHUT.

One evening when setting our for home, we put our Pro94 in the trunking mode to listen to our find. We all know that you've got to go through the search mode to get there. Suddenly it locks onto the talk group for a local taxicab company. A few seconds' listening makes it readily apparent that these folks are actually in the business of selling and delivering alcoholic beverages to underage person - yes, that's kids just like yours and mine. What do you do? Keep in mind that it's perfectly legal to listen to this stuff, andit's not lke telling the cops what hyou overheard in a cellular conversation. Also keep in mind that your law enforcement "find" is about to dry up if you report the taxis. What do you guys think?

There use to be a law that you could not divulge anything you hear on either public saftey or business band frequencies. I know that this law did exist when I first got involved in scanning over 20 years ago however I don't know if that law has ever been struck down. I know first hand (about 18 years) ago in Altoona, PA that law was used to convict a scanning hobbiest for divulging information he heard on taxi frequencies. He listened to a taxi being dispatched to an address, then he would go their in his taxi (different company) and 'steal' the customer.

So, I can say for one I would keep my mouth shut and continue to listen. Sorry, but I do that today as I live close to an apartment complex where I hear drug deals being made all the time (49MHz Phones & the NEW FRS freqs).

Because of this law, I wouldn't want them to know who reported them.
However, I'd feel something needed to be done.

I'd anonymously call in a "tip", not saying it's from a scanner.

You do nothing.... because it would more than likely
get thrown out of any court...(expectation of privacy)
And will do more to lose more of our priveledge of
listening to freqs...

Scanner laws used to be you can listen but you can not
repeat or record what you have heard... this worked
great till you got people that said to hell with that
and wanted to get some cash by black mailing people...
this was fine till it happened to then speaker of the
house newt gingrich... and all hell broke lose.. cell
freqs were blocked and put a scare into america about
what sort of people could listen into their
coversations...

Of course in the matter of illegal things you can work
around this... Say in the case of the taxi cab company
say you heard from someone(which isnt a lie) that they
were selling booze to kids... They have to investigate
it... Drug deals the same thing say there are
suspicious people out near where you live... they will
up the patrols... they definately have to investigate
at least the initial call...

But what ever you do DO NOT tell them where you heard
it... ITs not going to do them any good because they
cant use it...

And it sure the hell aint gonna do us any good
either...

792. Scanner Ethics

Yahoo group: pro94owners
Date: 2001-01-20 15:34:51 UTC
From: Ken Mason
Topic: 786 Message: 792

Moderator, this subject is not really off topic. It affects all of us. Some of "us" have hundreds of dollars invested in scanners and antennas. The key words are ears open, mouths shut. In my area you do not ask about what frequencies are used. They are "Top secret" I.e. it is easier to get the launch codes for an ICBM. Thanks to various web sites and publications this can be overcome. You can listen to anything on the airwaves, but can not pass it along, or use it for profit or gain. If it goes out via radio there can not be any reasonable expectation of privacy. The drug dealers and news media have caused this. Our local paper, radio, and TV station on more than one occasion have stated "According to radio traffic on the scanner....." This brings on the scramblers, cell phones etc.. If this trend continues, it will be unlawful to posses a scanner let alone sell one.

Up til the time a GOOD defense attorney asks the cops for info regarding the 'anonymous tip'. Sorry, the law says "You can Say NOTHING". As ethical scanner listeners we should obay the law before we have more laws against us.

794. RE: [pro94owners] Perfectly legal to show how to unblock channels

Yahoo group: pro94owners
Date: 2001-01-20 21:47:04 UTC
From: John Little
Topic: 768 Message: 794

Converting scanners to receive cellphone freqs is pretty much a dead issue. How many analog cellphones are left anyway? My personal and work cellphones are both digital and all my family members have digital phones. Maybe I'm just spoiled because I live in a large urban area.

On Fri, 19 Jan 2001 20:49:53 -0600, Delphinios <bl00@...> wrote:

>On This note, I would like to ask if you know how to unblock any and all channels on a pro 94. Disclaimer- I have no intention of using this knowladge practically, in the means of illegal usage or the potential thereof. -

Recent regulatory changes in the USA have made it impossible to gain government permission to manufacture and sell a receiver that is modifiable by
any simple means for reception of the analog cellular telephone frequencies.

This means that someone who wishes to modify the PRO-94 for this purpose faces
a task that might mean finding a way to replace the entire processor and firmware, or removing and replacing some major components. The days of magic
keystrokes or simple diode or resistor removal/installation are gone, at least
as far as new equipment is concerned.

For example, Icom's IC-T81A multiband ham transceiver had a Vulcan Nerve Pinch
one could apply to the keyboard to cause the receiver to open up to a much wider range of frequencies (not including the cellular band). However, because someone noticed that the image suppression in the receiver was not adequate and it was possible to overhear cellphones while tuned to frequencies
outside the cell band, Steps Were Taken. Later copies of this unit no longer
have wide-band receive capabilities that can be enabled through the keyboard.

Your Federal Tax Dollars at Work.

Topic: 786 Message: 795

Maybe this is a good time to bring this up... Since
there are a lot of newbies out there...

This link gives good info for federal and state laws
concerning scanners... REmember that some states
require you to do certain things to have a
mobile/handheld scanner in your vehicle...And some of
them ban them all together

If you havent checked your States LAws its a good
thing to check them. At least to cover your rear and
throw it under the seat when you get pulled over...

And if you dont think they will take them from you.
Its like radar detectors and Truck Drivers in a lot of
states they wont even blink.

Tony.

799. Re: Scanner Ethics

Yahoo group: pro94owners
Date: 2001-01-21 07:54:57 UTC
From: elliston@ix.netcom.com
Topic: 786 Message: 799

When I posted the original message, I said I hoped for a spirited conversation. Looks like I got what I wanted!

They teach us lawyers never to ask a question unless we know the answer. Here's my answer to my own question.

The folks who said it's illegal to disclose what you hear on the scanner are exactly right. As a practical matter, I don't believe you would ever be prosecuted in state or federal court for diclosing this information to the police, and I can't imagine a jury convicting someone for this.

This misses the whole point of the question, however. The point is that these guys and gals who voices issue forth from our little grey boxes (Pro94's) are real people, just like you and me, and they're doing a really difficult job for us. They deserve our respect and cooperation. Despite our amusement with listening to their supposedly private channel, they need to know that their conversations are not really private. Believe me, the drug dealers have the resources to accomplish the near impossible task of finding someone who can understand the Pro94 owner's manual, and program the thing to listen to these conversations.

I'd find an officer whom I especially trusted, and hand him my Pro94 one afternoon. "Here, take this home with you tonight, and listen. There's some stuff you need to hear. Bring it back tomorrow." If he accepts the offer, he's surely going to hear his colleagues on the third shift carrying on those "private" conversations. Proper measures will be taken to protect confidential information in the future, and appropriate sanctions may be imposed against the SMR that told them their communications were secure. And guess what else our favorite officer will hear! None other than our favorite taxicab!

How many birds did we kill with that stone?

On Tipping Off The Authorities On Overheard Scanner Communiques ,
No Need To Say , This Is What I Heard On My Scanner "Blah Blah Blah "
Say Something Like " I Have A Friend Involved In Some Questionable/Illegal
Activities
And Fear For Their Health/Well Being And Would Like This Investigated - But
Please
Keep Me & My Name Out Of It. Here's Where The Activity Is Happining_____"
That Would Not Break The Law , Your Conscience Would Be Clear , & The Proper
People Would Now Have The Ball In Their Court, & The Guilty , When Caught ,
Would Never Know What Hit Them.....

Scanners Have Been Around Since ???? Well , A Long Time. OK Then If Crook
Useage
Of Scanners Is So Prevalent , Why Then Is There Still So Many Arrests & So
Few Unsolved Crimes
If This Issue Is So Grave That The Scanning Community Brings It Up , Why
Then Is There Not Tons
Of News Stories Every Day Proclaiming Crook Caught With Scanner , Or Scanner
Bandit Makes Off
With Loot , Or The Pro94 Stalker Gets Away Again... I Would Think That The
Average Con Is Too Poor &
Dumb To Figure Out The Benefits Of The Extra Few Minutes Of Early Warning A
Scanner Provides ,
And The Better Criminals Have Already Plotted & Planned Their Heist Long In
Advance.

Telling The Cops That Their Private Channel Is Not Is I Feel Ultra Counter
Productive For The
Scanning Community - As Not Only Most Police & Firemen ALREADY Utilize
Scanners In Their Cars & Homes
So They Can Monitor Other Jurisdictions & Their Families Can Keep Tabs On
Daddy Or Mommy @ Work -
But Lots Of Police On This Board & Places Like Strong Signals & Such PROVIDE
The Freqs & Talkgroups
Of Those Secret Channels. The REALLY Private Channels That CANNOT Be
Monitored Are The Channels
Digitized , Encrypted , Scrambled , & Land Line Phones That Are Used EVERY
DAY By The Cops.

If You Are A Knowlegable Youth Seeking Employment At Radio Shack , You
Should Not Get Your Hopes Up
Too High. The Shack Hasn't Had Really Smart People Behind The Counters Since
Selling The Old Commodore 64
Computers. Seems They Just Want People To Push The Buttons On The Cash
Register. Yes I Have ALWAYS Had
Radio Shack Realistic/Pro Series Scanners (8 Channel Crystal , 10 Channel

Programmable Realistic , Pro 37 Pro 39
Pro 50 Pro 90 Pro 94)But With Each Purchase &/Or Service The IQ Level Seems To Shrink - The Most Recent
Time The Sales Clerk Misspelled 7 Words On A Simple Work Order...

Cell Phone Monitoring - Yes There Are Still Gazillions Of Analog Phones Out There - Plus Not All Digital Phones
Are What You Think. I Have A LCI Phone That Is Dual Mode - But In Both Modes The Signal Leaves The Phone
As Analog. It Only Becomes Digital When Rebroadcast Thru The Cell Tower. I Have Monitored My Phone Over My
Pro 94 Without Problems. No Modification Necessary .Cell Images Can Be Heard On 806.4000 - But You'll
Only Hear Them If You're Within 20 Feet Of The Phone. If You Want To Monitor Such Transmissions ,
Buy An Older Cell Capable Scanner (Like My Aforementioned Pros 37 & 39)

The Newt Gingrich Fiasco Was Covert Government At Its Most Devious - Did The Elderly Couple Come Across
As The Happy Go Lucky Looky At What We Found Here People They Were Billed To Be ?
Clinton & His Cronies Had All His Enemies Phone Calls Tapped (Bugged) And Recorded. When They Got Some
Really Delish Dirt On Newt , They Had A Copy Sent To These Democratic Sympathizers & Was Told To Release It.
If Were The Average Joe , They Would've Been Buried Under The Jail For Numerous Violations Of Local & Federal Laws.
You Can Witness Such Kinds Of Technology In The Jack Ryan (Played By Harrison Ford) Movies Like
Hunt For Red October & Patriot Games.

Get a hi gain antenna, like a 32 element 800mhz yagi. The rubber ducky has a whopping 3db gain when the radio is off! If you cannot quite lock onto the weaker signals, a higher gain antenna is the way to go.

806. radio station increasing sensativity?

Yahoo group: pro94owners
Date: 2001-01-27 19:54:44 UTC
From: Chris Hartzell
Topic: 806 Message: 806

I've got a perplexing question for all you smart people out there.

Today I was scanning the 420-450 Mhz ham frequency range and as usual there was nothing. Then around noon it went ballistic for two hours. A broadcast on almost half the channels. After listening for a while I figured out that a local radio station was doing a remote broadcast at a car dealership 10 miles away from me. When they talked over the mic that was all I could hear on most of the frequencies, but when they cut the mic out I heard broadcasting, but not from the radio station, from hams everywhere. At around 2pm they ended the remote broadcast and all of a sudden there was no activity at all again in that range for quite a while.

Here's my question. was their remote broadcast station increasing the power of the ham transmissions or increasing the sensitivity of my pro94? And in either case is it possible for me to recreate this environment so I can listen to that range all the time with this much success?

Thanks all

Chris

It is probably "intermod", wherein relatively strong (local) signals "mix" with others nearby and you get a potpourri of audio on top of each other.. When the prime intermodulation carrier drops, all drop. ;-)

812. Trunking Info for Atlanta

Yahoo group: pro94owners
Date: 2001-02-02 14:27:28 UTC
From: thall@bocaphotonics.com
Topic: 812 Message: 812

Can anyone tell me the Frequencies, System Type and Fleet Map for Atlanta Trunking? There are so many different sources of frequency information available I don't know which is correct, I have tried a couple (both list different frequency sets) but can't get the radio to
trunk properly.

thanks,

813. Way Cool Toy

Topic: 813 Message: 813

Thanks to this month's Popular Communications magazine, I downloaded a free recorder at http://www.davee.com. Hook the earplug output to your PC sound input and record from your PRO94. It's voice actuated so it only records when something is broadcast. The price is right, the download file is small and it works as advertised. There's more information on the web site. I'll be getting even more use from my year old PRO94.

P.S. Harry P, Thanks for a great list (resource) and thanks to Glen T for your long running and helpful (and sometimes just a tad impatient ;-))answers to all. I second the notion of many previous contributers that the manual needs about ten readings before it begins to make sense. My sympathies to new users but the early pain is worth the long term results.

814. Default frequency list

Yahoo group: pro94owners
Date: 2001-02-05 16:00:22 UTC
From: Ron Hollingsworth
Topic: 814 Message: 814

Hi,

I messed up and tried the "2" "9" code to clear my
PRO94 frequency memory. I thought this would simply
clear those frequencies I had added since owning the
scanner and it would return it to the factory settings
which I liked very much. I have since learned that
now I must re-program all the frequencies manually.
Does anyone have a listing of suggested frequencies
for the Huntsville, Alabama area. I do own the RS
frequency guide but I have heard that not all the
frequencies are active. I don't want to program
inactive frequencies since the scanner is limited to
only 500 frequencies per bank.

Thanks for any help you can give.
Ron H.

From: gwheeler@vmguys.com
Topic: 815 Message: 815

Question about the search button:

[I'm using the scanner in trunking mode, on an EDACS system. I don't know if this applies to other modes.]

If I press and release the search button, I get a single beep and the scanner enters search mode.

If I press and hold the search button, I get a double beep and the scanner doesn't change. (For example, if it was in scan mode it remains that way.)

So, what's the purpose of holding the search button? Does it do anything different in other operating modes? I don't see anything in the manual about it.

Gerry

From: Viscount Foelker
Topic: 815 Message: 818

Yes there is a difference between the two. If you have a 'list' of specific workgroup id's and have it in 'scan' mode, it will only search the specific inputs you have identified. However, if you press the 'src' it will place the scanner into a full search mode. Meaning it will search ANY ACTIVITY on the specific tower. In this mode, you can enter a specific workgroup id and search only that and not others.

I hope this information helps you out.

Good luck

819. Scanner Antenna Suggestion

Yahoo group: pro94owners
Date: 2001-02-06 03:22:54 UTC
From: Viscount Foelker
Topic: 819 Message: 819

I once read an article that was posted here from a gentleman who suggest an antenna for the Pro-94. FOr those that have missed it, it is highly recommended.

Being licensed by the FCC as a Amateur Radio Operator, I use a scanner (Pro-94) while performing as a street sweeper operator for a municipality. I am using a cell phone magnet mount antenna with a 3db gain. The comparison between the rubber ducky and the mag mount is a big difference. It also makes a very nice base antenna for home use. Here is the following information on the antenna;

From your nearest Radio Shack store, you can obtain the following.

Cat. No Item Cost

17-318 3DB, 10ft Magnet Mount Antenna
For Cellular Mobile Telephones $24.99

278-144A RF Adapter, TNC Type mate to Fit
BNC-Type Female $ 3.99

277-1008A Audio Amplifier $11.95

Additionally, if you have an external 8 ohm speaker would be a plus for you. Also, if you are in a very noisy environment, like myself operating a street sweeper, obtain an audio amplifier.

Here is how you hook this up.

#1 - Install the 9 volt battery.

#2 - You obtain a 5 foot cable with 1/8th inch phone jacks on each end.

#3 - You plug one end of the 1/8th phone jack to the external speaker jack on the Pro-94 scanner.

#4 - and the other end to the "input" on the audio amplifier.

#5 - Then take the external speaker that has an 1/8 inch phone jack and plug this into the "output" jack on the audio amplifier.

#6 - Turn on the audio amplifier and move the marker to where it just dissapears and then turn on the Pro-94.

#7 - Adjust the volume on the Pro-94 a little and then adjust the audio amplifier until the audio is distortion free. You will hear the difference.

Then you will be on top of the activity. Again, I thank the gentleman who suggested this a while back, so now I pass this again to the group. It is worth it!.

Happy scanning

Sorry, I guess I wasn't clear in my question.

The question was about the difference between the uses of the search (SRC) button. What's the difference between pressing and releasing it (which gives one beep), and pressing and holding it (which gives two beeps)?

Thanks

Gerry

Ron,
Here's the number one, ultimate source for frequency info. There's no higher authority!
http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/index.hts
It won't help with the fleet maps and talkgroups, but for frequencies, it's the best.
Here's an idea you may not have tried yet. Go to the State/County search. Enter Madison County, Alabama. Select service code YX for trunked SMRs. There are several other listings for trunked SMRs, but YX gives the best results. I suspect that you'll probably see the word NEXTEL a few times in that part of the country. These guys almost always use a Motorola type I system, and fleet map E1P8 usually works.
Once you program a trunked SMR, you'll find lots of wonderful stuff like plumbers, exterminators, etc. Here's where a little patience will pay off! Lock these guys out and keep searching. Law enforcement and other public agencies often contract with the Trunked SMR's to provide a secondary system. These radios are typically reserved for the "higher brass." The transmissions are usually very few, buth their content can be most interesting!
If this works, you'll end up with a scanner that will make the other scanner folks in your area say, "Wow, how'd you find that!" Let me know if this works.

2 questions! Alright, let me try

1 □ The numbers you see are called talkgroup ID□s. The different groups that use a trunking system are assigned groups of ID□s. Are you hearing audio when the ID□s show up? If so, then you□ve done it right. If not, then you□ve done something wrong. Which leads me to the answer for question 2

2 □ To scan more than one trunked bank at a time, from the conventional mode, press the TRUNK button and the banks which have stored trunking frequencies will flash at the top of the screen. On the left side of the screen you will see the word TRUNK and the letter □M□, □E□, or both. If you press the up arrow, the scanner will cycle through and show you which banks are Motorola systems, which are EDACS systems, and all trunked systems. Press the number key of the trunked bank you want to scan, then press SRC. The scanner searches for a data channel. When the scanner finds it, the scanner begins trunking. If you□ve entered talkgroup ID□s into your scan list, then pressing the SCAN button will start scanning through those ID lists.

I found all this information because I read the manual. I have the original Pro-94, so I don□t know if they are using the same manual, but if you look in the Table of Contents for □Scanning A Trunked Bank,□ you will find all the information you need there. In my manual, that section starts on page 46.

PLEASE, READ THE FREAKIN□ MANUAL!

Glen brings up an important thing... Ya Gots to read
the manual....

And i dont mean just once quick read through. Follow
it step by step, about 7 times did it for me (im slow)
lol.

As you get to understanding Trunking it all starts
making sense. :)

Radio Shack i think uses people from mars to write the
manual because some important stuff concerning one
part of the operation is 15 pages away from where it
needs to be. But as you get going and understand your
scanner the manual starts making sense...

Which i dont know if thats a sign of us getting
smarter or the manual making us dumber ;)

Okay, this is odd, and on the same subject.
when I first programmed in the local trunk frequencies, it would display "1-500, 1-400," etc. Depending on the talk group ID.
Now, Since I wenty through and organised all my frequencies into specific banks (security, FRS and services on one bank, HAM on another, etc.) it displays "32 554, 28 453", etc. instead. Anyone have any idea why, or how I could fix it?

Also, glen, please lighten up. sometimes, especially with newbies, they DO read the manual, but just do not understand what they read, nor know how to apply what they read. the first time I picked up a scanner, I didn't know what a trunking system WAS. It took a while, exparamenting, re-reading, searching the internet, before I found out WHAT it was, WHAT I was doing when I was programming in a truking system, and then programming the trunking system started to make sense. We were all new to this, one time. Yes, some don't read the manual, but that dosen't make basic questions "stupid".

Thank You.

From: Glen Tubbesing
Topic: 824 Message: 829

Hey, I did lighten up! Didn□t I answer his question first before telling him to read the manual? In my own defense, I never once used the □s□ word in my communication. Yes, sometimes I do get a little short with people when they are asking how to do something that is very easy to find in the manual. I mean, c□mon, the guy was asking how to turn a trunked bank on. That□s on page 47 under the heading □Turning a Trunked Bank On or Off.□ That□s not stupidity, it□s laziness. That□s like people who call directory assistance when the phone book is sitting on the table. Yes, I know I was a newbie once, but I read my manual several times in order to understand how to program it properly. I don□t care about all these □tricks□, or how to scan cell phones, or any of this other fancy stuff. I just want to use my Pro-94 to scan trunked systems here in Las Vegas. Where does it say you need to know how a trunking system works in order to program your radio? Isn□t that like saying a cashier at McDonald□s needs to know how the electronics of a touch-screen cash register works before they can use it? No! You push the right buttons, the machine gives you a total, you take the money and give the change back. Likewise, I don□t need to know how a trunked system works, because somebody else found that out and built a radio that can scan trunked systems.

Yes, curiosity is good. Without it, we wouldn□t be building the International Space Station right now. But, to listen to a radio, do you really need to have that in-depth knowledge just to be a user, or in this case, a listener? Just find the frequencies, read the directions on how to put them in your radio, then turn it on and listen.

Just my $0.05, adjusted for inflation.

Glen Tubbesing

I think ya all need to lighten up on Glenn lol.

He answered the question then said that you need to
read the manual...

And its true you cant just read through it lightly or
do it once and think you remember it all you have to
follow the directions step by step and read the whole
manual because radio shack (i think) pays people more
to write the manual harder than it needs to be. But
its still understandable if you read the manual like a
manual and not like you are skimming the sports page.

As for not having the manual... So what if it didnt
come with it i imagine you found your way to the one
on the RS website. IF not
http://support.tandy.com/support_electronics/57321.htm
For the Pro-94 And
http://support.tandy.com/support_electronics/60841.htm
For the Pro 94A There are some minor changes in the
manual to respect the radio change.

I'll give on the point, that yes you did answer the question, then told then to RTFM. =-}

I guess, working tech support for quite a while, that I have just gotten tired of people who (don't take this as directed at you, glen. It's directed as a general reference) know the equipment, have done their share of reading and exparamenting, then look down on everyone else who, weather they have or haven't read the manual, asks a simple question that was covered somewhere else.

Apologies for griping, I think I am just burnt.

Okay, this is odd, and on the same subject.
when I first programmed in the local trunk frequencies, it would display "1-500, 1-400," etc. Depending on the talk group ID.
Now, Since I wenty through and organised all my frequencies into specific banks (security, FRS and services on one bank, HAM on another, etc.) it displays "32 554, 28 453", etc. instead. Anyone have any idea why, or how I could fix it?

Either You Have Removed The Fleetmap You Were Using Or The System Has Changed From Type 1 To Type 2
If The Talkgroup ID's End In Even Numbers , Basically You Have A Type 2 System. If There Is A Mix Of Even & Odd
Then You Have A Type 1 & or Type 2a. Fleetmapping Is A Tricky Business, So Check Out Lindsey Blantons Or Warren Whitbys Sites For That Kinda Info. If You Want The Most Accurate Fleetmap, You'll Need To List Every Active Talkgroup
In Numerical Order - You'll Quickly Find That Each ID (User) Belongs To a Group (Fleet). The Un-Mapped Type 1 Or 2a
Systems Show Each Radio As A Talkgroup ID. - This Goes Away As You Overlay A Fleetmap , And Assigns The Bunches Of Single IDs 1 Single Fleet TGID - Like 100- 5 or 307-2

Also, glen, please lighten up. sometimes, especially with newbies, they DO read the manual, but just do not understand what they read, nor know how to apply what they read. the first time I picked up a scanner, I didn't know what a trunking system WAS. It took a while, exparamenting, re-reading, searching the internet, before I found out WHAT it was, WHAT I was doing when I was programming in a truking system, and then programming the trunking system started to make sense. We were all new to this, one time. Yes, some don't read the manual, but that dosen't make basic questions "stupid".

Aww Come On , When My Job , Friends & Wife (Not Necessarily In That Order) Are All Nice To Me , & My Day Has Been Worry Free & Minus Stress - I Need Somewhere To Turn For Some Teeth Grinding Abuse. Where Else Can I Think Of Other Than On The Pro 94 Board When Glen Sends A Posting. Hey, Billy, just in case you didn☐t know, I always have a grin on my face when I say RTFM! ;-) SO READ IT! ;-) (Sam Kinison, my hero!)

And for everyone else, it☐s nothing personal. It☐s just that many of these ☐simple☐ questions can be answered if you just sit down for a moment and carefully look through the manual.

Glen

+
TO:thall@bocaphotonic

The trunking system forAtlanta ia a Motorola Astro digital
system. If you had the frequencies you would be able to track, but
unfortunately your Pro-94 can not decode the audio. It will be a while
before digital tracking scanners are on the market. I have this on good
authority from one of the developers of a future digital scanner.
However, it is possible the Atlanta system may occasionally
switch to analog audio.Check the surrounding area departments for analog
activity-This may occasionally be helpful to see what Atlanta is doing.
It isquite likely that the surrounding departments are
using the Atlanta system and have abandoned their old frequencies.You
will probably have to wait until digital scanners are on the market.
Sorry that I could not be of more help.

Gary,

838. Re: Pro94A

Yahoo group: pro94owners
Date: 2001-02-14 00:00:38 UTC
From: ChicagoStretch@AOL.com
Topic: 823 Message: 838

The 94A is a newer version that can follow trunked and conventional channels all in the same bank and simultaneously across all 10 banks. The "old 94" could only follow trunked or conventional at one time. Without getting too deep and too technical, it was a hassle. Now, it's a beautiful thing!!!! The 94A has a boxed A next to the product catalog number on the back of the scanner. I think it's 20-524 for the old and 20-524A for the new. Whole different owner's manual, too.

I guess I can try to get my two cents in quickly, being a "newbie". After the frustration of first time manual reading, skipping to the sections I was most interested in, instead of investigating the basics I will make two comments:
1. All of the necessary information is in the manual. Glen is correct
2. The manual is very poorly written. It suffers from poor organization. A well written manual will convey information in a manner that even an engineer like myself could understand. I have to sift thru tons of vendor manuals in my work. There are good ones, and there are bad ones. They generally all convey complete information. Some are just better organized than others.

I believe that the 94 manual could stand a page or two dedicated to discribing each buttons function(s) and the modes in which the primary or secondary function is in effect. Enough

Harry, I do have a technical question if you happen to let this go through.

Is it correct to assume that, in a trunked system, the frequency from the mobile to the repeater is different than the repeater frequency? These links are not "simplex" are they? Can the mobile "talk-around" directly to another mobile?

I really do enjoy my scanner.

840. RE: [pro94owners] Re: Glen Tubbesing&Comments

Yahoo group: pro94owners
Date: 2001-02-14 09:46:40 UTC
From: Glen Tubbesing
Topic: 836 Message: 840

Hi! Thanks for the support. Let me try to answer this one.

First, yes, I agree there are some confusing issues with the manual, but since all the sections are listed in the Table of Contents, it helps in tracking down answers to questions. But, if you think the Pro-94 manual is confusing, you ought to check out Icom□s manual for the IC-T81 radio, or the manual for any ADI radio. These manuals look like they were written in one language and translated about 3 or 4 times before we got the English version! Oy vey!

In response to your technical question, yes, the trunked systems are duplex. On the 800 mHz band, the repeater input is always 45 mHz below the output. As I understand it, simply put, the radio listens to the control channel, which tells the radio what frequency to transmit on, how much power to use, then what frequency to listen to for a response. That□s in addition to all the talkgroup data flying around out there. That, in a nutshell, is it.

Oh, yeah. In my manual, pages 20 and 21 list the functions of each button on the keypad, and where to turn in the manual for more. Your mileage may vary!

The Infamous Glen

841. Re: trunking

Yahoo group: pro94owners
Date: 2001-02-14 17:40:00 UTC
From: Glen Tubbesing
Topic: 824 Message: 841

I almost forgot... I gave instructions on how to change trunked banks when you start trunking, but I forgot to say how to change trunked banks while you are trunking. That one's pretty simple. Just press the ALT button and the display will change. It will show whether you're in Bank A or Bank B, and you'll also see the banks that you are currently scanning with the current active trunked bank number flashing. If you press the number key of the trunked banks you want to listen to, that will change the banks. If the bank display changes back while you are entering numbers, just press the ALT button again.

Topic: 844 Message: 844

I am looking to increase the gain on my Pro 94.

Has anyone changed from the OEM rubber duckie on the Pro 94?

If so what antenna did you change it to and what kind of performance was achieved.

Thanks,
Sean

well, that depends. are you looking for better gain for "at home" use or "mobile - hand held" use?

for at home I found that a standard discone works real well. Pulls in channels I can't even pick up with the rubber ducky.

for mobile RS has two antenna you might be interested in. One is the telescopic antenna and the other is the high-performance rubber ducky. I found them both to work better than the standard ducky but not a whole lot.

Then on another issue, it depends on the spectrum you're trying to receive. Is it a certain frequency range or the entire spectrum? If it's a specific range then you run into boat loads of options.

Chris

One good , very good, compromise,for mobile use :)is to use a ham 2 meter antenna, 5/8 wavelength. It receives VHF very well, and is "long" for UHF, and you would really rather be long, than short..:)
I have one of these, and one of the RS telscoping mag mount antennas on my car, and they work equally well, but the 5/8 -2 meter antenna looks better, and is cheaper, and can be used for ham radio, when I want.

The Icom FA-S6270B, which is a dual band antenna sold with the Q7 amateur dual band transceiver, shows marked improvement on the VHF low and UHF band. It's slightly longer length is an improvement over the entire receive range. Any dual or tri band ht rubber duck should provide a major improvement over the stock antenna.

All the replies up to now are true and they are all
good. If you want to spend money go right ahead :)
personally i have a discone i use for at home. my
rubber ducky when im out and about (walking) And since
im a cheapskate lol(Actually not much money lol) I
just use my old magnetic mount CB antenna. Yes they
arent as good as something designed for all bands.
But if you have one All you have to do is buy the BNC
adapter Radio shack product 278-121. Connect it to
the antenna and then connect it to your radio.

Its a much higher gain than the Rubber ducky. I see
good reception in all bands... Not as good as my
discone. But i cant take my discone out with me on
the road. if you dont want to spend the extra money
or you dont have the money to do so to get a dedicated
scanner mobile antenna the $3.49 adapter to the CB
antenna you may already have will work great :)

I should mention this i didnt in the my last reply.
Before you take your Scanner with you out on the road
check local/state laws concerning mobile Scanner use.
Some states do not allow scanners in the car or if
they do you need to follow some sort of procedure. If
you get caught in one of these states they can take
the scanner from you.

I liked and disliked the pro-94. Audio was terrible and it seemed it did not pick up near as well as my pro-91. So I only used it when I wanted to listen to edacs. There is usually static that comes in you know when someone is transmitting but it seemed like the person transmitting was in the background and you could really here the static. It is really more like having a lot of trebble and no bass. But hey you know what you can listen to edacs so I didn't care. But I just used it for edacs only for motorola and stuff I used the 91. (the best audio I have ever had was on the ar-8000 that speaker ruled to bad other snanner companies don't invest in a better speaker.) Ok group talk to you later happy scanning.

Hello, Sean

I☐ve used a couple of different antennas on my Pro-94. My favorite for overall sensitivity is the Diamond RH77CA. You can find this antenna at most ham stores. Also, take a look at Rich Well☐s Strong Signals site. He did a review on antennas a while back very good info there. And, one other thing you can do if you aren☐t already doing it is pick up a copy of the magazine ☐Monitoring Times.☐ It includes all sorts of great info, as well as ads for retailers with good equipment for your scanning needs.

73
Glen Tubbesing
KD7HHD
Las Vegas, NV

P.S. I hope this isn☐t redundant information for you. My ISP has been down since about 1:00 yesterday, and I☐m wading through about 50 e-mails.

859. Pro-2029

Yahoo group: pro94owners
Date: 2001-02-16 15:12:12 UTC
From: kevinweber@aol.com
Topic: 859 Message: 859

I know this is the Pro-94 group, and I have been a subscriber for a long time. I enjoy all of the great info that is posted here.
I'm looking for some assistance from my fellow Pro-94 owners with a Radio Shack Pro-2029 desktop scanner.
The memory for the programmed frequencies is not retained very long after the unit is unplugged from the AC.
I have searched for detailed schematics and also asked the local RS dealers for assistance, but to no avail.
Does anyone have a clue as to what IC chip or other circuitry is responsible for memory backup for this unit?
Thanks for your help!!

Hey Glen,

Have you ever tried the Pryme RD-98. This scanner antenna is like a flexable spegetti, and it works well. I have two PRO-94"s one 94 and one 94a. I put the diamond on one and the pryme on the other. I couldn't tell any difference. The diamond is more handy than the Condor, and the Pryme is alot better to carry than the diamond.

What do you or anyone else think,(oh great One)

Topic: 881 Message: 881

Hello guys,

Probably like a lot of you I have more than one scanner. This sometimes leads to problems where you can do something on one scanner but not on the other. My other scanner is a Yupi MVT7100, on this there is a knob that I can twiddle to move up and down stored frequencies. Is there a way how to do this on the Pro94? I know if you press man it moves up one position in the bank but is there a way to move down without typing the memory position?

Thanks,

Rav.

883. Clip On Antenna Mount with Telescoping Antenna

Yahoo group: pro94owners
Date: 2001-02-23 22:45:20 UTC
From: ClubDJMT@cs.com
Topic: 883 Message: 883

Hey there, me again. :) K, I'm not the fondest of reception and what not, but I hear the telescoping antenna (cat# 20-006)is supposed to be a far superior piece, compared to the OEM rubber ant. Well, I want to see if I can kill 2 birds here. I want better reception from the receiver, and have a mobile antenna...and I when say mobile, I mean, being able to take it with me in no matter which vehicle I am in, as I jump from truck to truck, so, this clip-on antenna mount (cat #20-023) looks like just want I could use. Correct me if I'm wrong, but it looks like I'll have a better reception antenna all the time, whether the ant is on the unit itself, or the window clip on mount, plus, I'll have the option to keep it mobile at all times, while saving the extra $$$ in dumping it into a mag mount which I'd have to throw on the roof when I wanted it, coil up the extra wire when I didn't, etc, etc. Is this a good idea, and has anyone used any of the 2 pieces? Thanks for the help.

--- Joe
Worcester, MA

884. Re: [pro94owners] Clip On Antenna Mount with Telescoping Antenna

Yahoo group: pro94owners
Date: 2001-02-24 00:12:43 UTC
From: Chris Hartzell
Topic: 883 Message: 884

well, I tried the clip mount and within three mounts and dismounts the coax was stripped down to the wires within. Typical ratshack quality.

Unfortunately it's the only option I see in your scenario. It does help to have the antenna outside the vehicle. Also I found the high-performance rubber ducky just as effective as the telescoping. Much smaller "footprint" if that's what you want to call it. Plus the telescoping antenna isn't as "weather-resistant" as the rubber coated ducky.

Chris

889. Florida scanner Law

Yahoo group: pro94owners
Date: 2001-02-25 03:36:50 UTC
From: mckraussjr@aol.com
Topic: 889 Message: 889

The state of Florida law on scanners states that you cannot install (mount) a police in your vehicle, unless you are a Ham Operator, police officer, vehicle is a Crime prevention vehicle or work for an alarm system monitoring company. However you can carry or wear a portable scanner in your vehicle at any time.

Just get yourself a punch card ballot, and tape it over the face of your scanner. Anyone in a position of authority will pretend to ignore it!

891. Re: Clip On Antenna Mount with Telescoping Antenna

Topic: 883 Message: 891

Hey Chris...thanks for the advice on the clip-mount. Fortunately, I will definitely be using this more than 3 times with 30 days, so if the wires strip down, I have the ever so useful return policy, then I'll come up with another option! :) As for the rubber ducky you mentioned...I have a few questions. Which antenna is it (make/model/description)? What is a "footprint"? I'm not too fond of the antenna aspect of scanners, and receivers in general...so any help is useful. Thanks! :)

From: Chris Hartzell
Topic: 883 Message: 892

Well, when I said footprint, I basically meant the raw size of the antenna. Extended, the telescoping antenna is pretty long, while the rubber ducky one is only about an inch or two longer than the stock antenna.

On the rat shack page go to the Telephones & Communications section
Then: Communications
Then: Scanner Radios & Essentials
It's the third item down the list. It's actually listed as the deluxe scanner antenna.

893. Signal Strength

Yahoo group: pro94owners
Date: 2001-02-26 05:06:58 UTC
From: crbxrx@yahoo.com
Topic: 893 Message: 893

I recentely mounted the high performence rubber duckie ant. from RS on a 14 ft pole , then attached it to my deck which just clears my roof line, made a big difference in clarity, some in distance. My question is : will a discone ant. mounted on my roof show improvement over the duckie. Im trying to pick up 20-30 miles around my home with an ant. for the entire range of the pro-94..Thanks for any input or advice.....Still learning and experimenting.....

That was the old frequency used my Russia's MIR Space station. I use to hear it from time to time (maybe one a week). However I haven't heard anything on it since last summer.

Is this freq now being used my the ISS? If so who by, the Americans or the Russians?

From: Chris
Topic: 904 Message: 904

I am asking about listening to the 747 that carries the Space Shuttle back from California. It is now delayed due to bad weather in California and may come through tomorrow.

It will circle the city before it leaves (Tallahassee) to Jacksonville. The last time it was here was in 1994. They fly at 2000 feet so it is quite visible.

FYI, the radio station gave out this phone number 321 867 2525 (KSC) for information on what time/day they are flying. I would imagine it is going to fly around most large cities off I-10.

I was hoping to get a link to frequencies they use so I could listen to them approach, then go outside at the exact time to see they go by.

Thanks Chris. ..

If they are landing at a commercial airport i would
use the approach freqs for that airport the same for
military approaches and departures

ARTCC for the area is Tallahassee Remote of the miami
artcc is TALLAHASSEE REMOTE
125.05 128.075 134.575 135.325
307.2 343.8 360.8 364.8

this site has quite a few NASA freqs
http://www.ohioscan.com/nasa1.txt you can try looking
there.

I believe the site i saw it at is a lil old(1997) the
call sign for the 747 that piggy backs the shuttle
back is Nasa911

Good question!
I'm using a Pro94, so my answer won't be very helpful unless we assume that the power consumption is the same on both units.
I use two sets of NMH batteries, one set Radio Shack and one set Everready. I switch batteries every night, using the 15 hour charger sold by Radio Shack. After about 14 months of use, I can see no deterioration in either set of batteries.
I never charge the batteries internally. The 15 hour charger is cheap, the Pro94 is not. Why risk lightning damage by charging the batteries overnight inside the scanner? The NMH batteries get noticeably warmer during charging than the old nicads. The Pro94 was on the shelves several months before the NMH's hit the market. I doubt that the unit was designed to tolerate the heat of charging NMH batteries internally over a long period of time.
I usually get 8 - 12 hours of scanner use from a charge cycle. The unit seems to consume the batteries considerably faster when trunking.
The key to battery conservation is keeping the volume set at the lowest level that will allow you to hear what you want to hear.

You probably will get many different answers. I have a set of Every Ready ACCU 1200 mAh and a set of Ray O Vac Ultra 1300 mAh NiMh Both give about 10 to 11 hours service, depending of course on amount of traffic and volume setting. I have a Ray O Vac PS-1 charger, it shuts down when the batteries are fully charged "overnight" However I generally charge them in the Pro94A "overnight" about 12 hours or less. Have been using them constantly since last October

Why not? Ive always charged mine externally as I had to use it 24/7 and simply swapped batteries, but I am curious.

I havent used my Pro94 in a while since I got my Kenwood MilSpec radio. Im thinking of saving it for other uses though.

914. EDACS Trunking

Yahoo group: pro94owners

From: jcsdjs@home.com
Topic: 914 Message: 914

Hello all,
I'm hoping that someone here can help me. First, let me say that I have read the manual quite a few times (ok, at least 7 times, not quite 10 yet). I am trying to setup a bank for EDACS trunking and have programed the bank as follows:

PROG
TRUNK
Ed E(SVC)
Programmed all freqs in LCN order for this system.
Selected SCAN and SRC, but do not find any talkgroups or find the data channel.

I have done this for other channels as well and can not seem to get the EDACS trunking to work. BTW, I am using a PRO-94A. Any help here would be appreciated.

Thanks,
John

John,

Try your last step the other way around press the SRC key first, then the
SCAN key. See if that helps.

Hey folks,

There haver been reports of scanners melting down if you charge NIHM batteries in them to long. It is better to have several sets and charge them in a NIMH rated charger. You don't have a chance to damage your scanner.

For those of youy who don't know Wally World is Walmart.

I hope this clears up the confusion.

Keep Scanning

Dan

Ignorance is not bliss. NiMH batteries require different, more
stringent charge management than NiCD. I doubt the 94 is designed with
this in mind. You should not charge NiMH (or LION, for that matter) in
a charger that is not rated for them. Charging NiCD in the Pro94 is
fine.

But the 94 is rated for NiMH. It has a switch in it to select between NiMH an NiCd.

That's funny; the switch in my 94a reads 'Alkaline <- -> NI-CD'.
Unless someone can show (beyond what the user's manual might claim)
that the 94a has proper charge management circuitry for NiMH, I stand
by my statement that they are not correctly supported. NiMH batteries,
while often touted as direct substitutes for NiCD, have different
charge/discharge characteristics, behave differently when full charge
is reached, and are not tolerant of overcharge. 'Close enough', maybe,
but not for my liking.

Ok i want everyone to open up their scanners take the
batteries out and read the warning in the battery
compartment....

It says

WARNING
CHARGE ONLY NICKEL CADMIUM BATTERIES. CHARGING OTHER
TYPES OF BATTERIES CAN CAUSE THEM TO BURST RESULTING
IN PERSONAL INJURY AND DAMAGE.

So its settled you can use NI-MH but you can only
charge NI-CD Batteries....

I will say this that the manual says you can use
both... it also says you can charge both so its a do
at your own risk sort a thing i say... the best bet
would be to do this if you want to use NI-MH's buy a
separate charger. And buy NI-Cds to charge in the
radio that way you can always have two sets of fully
charged batteries (which is always a great thing) and
you dont take the risk.

I imagine the warning in the battery compartment may
have been for akaline batteries but it doesnt say this
it could however be a catch all if something happens
your nI-Mh's explode they have a ringer...

But the manual does say that you can charge both i
would personally go on the course of caution i like my
NI-MH's But i like my scanner more :)

So far, I have had good results with charging the NIMH batts in the PRO-94
and the ol' PRO-51. No excessive heat, but I do wonder what, if anything
I'm hurting. I do question whether the batts are receiving a full charge.

What are the characteristics of a NIMH charger vs. a NiCad charger?

My personal opinion the warning means to charge only Ni-cads, as opposed to regular or alkaline batteries. Perhaps the warning should be to only charge ☐rechargeable-type batteries.☐ Just my interpretation.

Oh, by the way I☐ve had a set of Radio Shack Nickel-Metal Hydride rechargeable in my radio since day one, and no problems. I run the scanner on average about 8 hours per day, then plug in to the wall-wart overnight. Maybe I☐m just lucky?

>hello all,

I may have made the mistake of saying some scanners have melted down on NIMH batteries, I am not sure about 94's, but I am sure about 92's.

On page 11 of the 94a book it reads "WARNING: Set Alkaline-jack-NI-CD to NI-CD for use only with nickel cadmium (NI-Cd) or nickel metal hydride (NI-MH) rechargeable batteries.

Both the 94a and the 92a say they can use NIMH batteries, but on Strong Signals there was talk of these batteries over heating and damageing the scanner. Thus I rarely charge mine in the scanner. I can replace batteries and chargers easier than my scanners. This was only a personal preference.

Sorry for the confusion.

Keep Scanning.

Dan

PS:On page 12 of the PRO-92a book it reads. "The scanner can charge NI-MH batteries, however, these batteries require more than 24 hours to charge. We recommend using an external quick charger for NIMH batteries.

I have both scanners, and did not want any problems.

Thanks.

Dan

Okay, This is from personal experience:
When I first Bought a set of NiMH batteries, I tried to charge them in my scanner for nearly 2 weeks. Yes, they would charge, and no, they didn't hurt my scanner. However, they only charged (after 20 hours of charging) about 1/3rd full, and I would get maybe 4 hours of life from them. I gave up and bought a charger from walmart (~$10.00) and now have only 6-8 hours charge time with 12-16 hours use. So, using a charger is much better and a lot less risky. But hey, it's your scanner, you do what you want with it. =-}

Are you getting the sound of the control channel as you program all
the frequencies in?

Hi John

I am in Charleston SC. Have set your scanner to ED to accept the EDACS Frequencies. Some times when I am lucky I pick up the Port of Charleston - Container Operations who seem to be on an Ericson system.

Good Luck
Steven

If you have any problems have a look at the egroups Charleston Scan page

>What are the characteristics of a NIMH charger vs. a NiCad charger?

- From an article at http://www.ednmag.com/reg/1994/090194/18df4.htm :

New battery types, including NiMH, lithium-ion, and others, offer
better performance than NiCd
but at a higher cost. Many conventional intelligent battery chargers
utilize dV/dt (slope) detection, which senses changes in voltage
exhibited by most batteries in the early stages of overcharge (Fig 1).
NiCd battery voltage exhibits a characteristic 30- to 50-mV decline
after full charge. "Minus-delta-voltage" sensing detects this change,
but only after some degree of overcharging. NiCd batteries tolerate
some amount of overcharging, especially at low charge currents, but
overcharging causes the batteries to deteriorate and gradually lose
storage capacity.

When overcharged, NiMH batteries show a decline of just 3 to 5 mV,
which is difficult to detect
using minus-delta-voltage methods. Recently offered charging
controllers for NiMH batteries
generally abandon the minus-delta-voltage charging-termination
technique in favor of zero-slope
detection, which senses a characteristic leveling off of NiMH battery
voltage after full charge . Because of the subtle nature of the NiMH
dV/dt characteristic, this method compromises the
accuracy of full-charge detection to achieve noise immunity.
Unfortunately, NiMH batteries are
intolerant of overcharging, which can be especially troublesome at
charge rates of 1C or greater. (C refers to a current numerically equal
to a battery's ampere-hour (Ahr) capacity.)

HI!
I have owned my scanner for just over a month now. I have read through my manual several times, and frankly keep getting lost in it. lol
I am trying to figure out if there is a way to just program the 5 digit numbers that I have from my police dept. I have been using my L-Out button for the codes that come up that aren't what I want, but now it's full and I still have tons that I need to weed out. Is there a way to just load the 5 digit numbers, that I haven't found yet?
I would appreciate any advice on this. Thanks!

The 5 numbers you are talking about is the ID's of the various departments ie. police, fire, ems etc.

Once you have entered all the trunking frequencies - eg. 860.975 etc. the you push the SRC button and you scanner will start trunking. At this time the ID's will come up. If you then push program you can enter these ID numbers in to memory. Once these are programmed in and you are busy trunking push on the scan button and only these ID's will be monitored.

Hope this helps.

Kind Regards
Steven in South Carolina

Jennifer,
Hope this helps also.
1. write down the 5 digit numbers. See which ones talk to each other. Subtract the lowest 5 digit from the highest. If it is a Motorola type I or IIi system group separation will be multiples of 8 I.e. 16, 32, 64, on up to 8191, You must go to LC Blantons web page, trunked radio net I think and down load an article by Dave Goodson. Read it several times. I had the same problem when I first started out. ABOVE all else be patient and ASK questions. The people on this site are very helpful and knowledgeable. If you can't find Goodson's article, let me know I can fax, or snail-mail a copy. Just e-mail me if you want a copy.

Steven,
Will it have rolling across the screen "Scan ID"? So that will just scan those I want to listen to? Gosh I hate not knowing what I am doing with this thing. lol But I am tired of listening to those who aren't in my general area. WOuld rather listen to my small town stuff, stuff that if I wanted to, I could run over and see what's going on! lol
Thanks for all your help and insight!

All, thanks for the help. I was out driving and started trying to
scan the EDACS channels that I had setup. About 5 miles from the
house I started getting the control channel and trunking began
working. I guess I am just a little to far away from the tower to
get this one at home. I would have thought that I would have gotten
this since these are the Red Cross and TXU bands for this area.

Thanks again,
John

942. Antennas

Yahoo group: pro94owners

From: Dave Stewart
Topic: 942 Message: 942

Sometime back, someone posted that a good replacement antenna would be the one they have at RS with the bendable base and has a 3db gain. (Not sure of the part number).

Well, I picked one up for $4.95 (reg $14.95) and the tnc-bnc adapter. Ti doesn't work as well as the stock antenna. I also have an outside mobile antenna I have used while driving. It doesn't work as wel as the stock antenna.

I'm in OKC, OK and the OHP uses trunking. There are marginal areas all over the city. I am barely able to grab the data channel sometimes. I'd like to get a 3db-6db gain rubber duck antenna that will be a large improvement over the stock antenna. I'd also be interested in a trunk-mounted (no mag mount) antenna that would be a large improvement for traveling.

I'd be willing to pay for quality, but I don't want to throw away even $5 on something that's not going to work.

Anyone have some knowledge of what's available and where?

Dave,

Check your local amateur radio store, if you have one. Also, there is an excellent review of handheld antennas on the www.strongsignals.net <http://www.strongsignals.net/> web page. My recommendation? I like the Diamond RH-77CA 15□ whip or the Premier RD-98 17□ whip. The Premier is a very slim antenna and very flexible, and I like the sensitivity of the Diamond, which is listed as a +6 dB gain antenna. Also, check with www.grove-ent.com <http://www.grove-ent.com/> for a listing of their antennas.

Dave,
I've had about the same experience with replacement antennas. Easy to get improved performance in the VHF Hi band and the UHF bands, but not much to get excited about in the 850-865 MHz range. I think this is because those antennas are made for Hams, and there's not much of their activity, as far as I know, in the 800's.
Here's an idea I haven't tried yet. You've probably noticed that those trunked radios used by the cops in the Metro areas have BNC connectors. For those guys, the probability of physical damage to an antenna or its connector is great, and it could be a matter of life and death if not promptly repaired. I'm guessing that every radio that passes through the shop gets a new antenna, regardless of whether it's needed. Call this the "disposbale rubber ducky theory." I guessing that the radio shops for those departments have junk boxes containing perfectly good 800 MHz rubber that they'd be delighted to get rid of. Maybe several of us can give this a try in different areas of the country, and compare the results here.

Hi Dale

I am in Charleston SC. We have stores around here by the name of "Goodwill."
I do not know if they are country wide.

At certain times they have the old portable car phones for $1 or $2 dollars.
I believe they were all 800mhz. I buy them up take off the antenna - donate
the phone back to them and then buy the adapter plug at Radio Shack.

When I just want to do 800 mhz trunking I use the old phone antenna. I get
quite good results and a cheap way of trying out different antennas.

Cheers Steven

Steven, also a good idea. About three months or so ago, I saw one of those old bag phones in a thrift store for a few bucks. I wish I would've picked one up when I had the chance, but I didn't think of it since I only had my conventional scanner, and most of the traffic around here is conventional.

Well, I've been looking for a month and I haven't seen one since. Can you beleive it? I'll keep looking, and I'll be trying to get in touch with the local police radio shop.

Thanks!

Hi there!
I finally got those ID codes going perfectly after some help...btw, THANKS! Last night, I go to turn on my scanner to listen to while I try to go to sleep, to find it's acting goofy.
It looks like it's trunking, but it's not doing the ID's that I had, just the frequencies and it's showing "Hyper" on it too. I tried to clear out all my frequencies, and start over, and now it won't let me load my ID's that I want. Can't help but feel like I am listening to the whole Galveston county area, and missing my local small town junk. lol I don't know what could have happened. I hope someone can shed some light on this. Worse comes to worse...I will have to torture the Radio shack people later! lol
Thanks for any thoughts!

953. Bad scanner

Yahoo group: pro94owners
Date: 2001-03-12 23:47:38 UTC
From: amama6x@aol.com
Topic: 953 Message: 953

Hi gang!
After clearing out my frequencies, reloading them, trying to redo the ID's and getting an error everytime, I finally called Radio Shack's tech support. My arrow buttons had stopped working, and we couldn't get anything out of them. Tech decided over the phone that my, just over a month old, scanner must have a defect in it. They gladly exchanged it out and I am back in service! YEAH!!!

I finally spurged (a big 8.99, lol) for a home adapter, so I will quit spending money on batteries to just listen at home. I am probably going to get to the point that I will be sick of unplugging and plugging into another room and end up with a zillion adapters, one for each room!

Is there a 12 step program for a scanner addict? lol
Thanks for all your help and support.

Hugs!
Jennifer in Texas

954. Re: [pro94owners] Bad scanner

Yahoo group: pro94owners

Topic: 953 Message: 954

Finally a question I CAN answer.

I have two adapters. A 9V for the home and a cigarette adapter for the car (I'm "news media"...we're allowed in Kentucky.) Inside my Pro-94 are the top of the line rechargables with the switch set to nicad. My scanner runs generally 12-18 hours a day (usually only off for sleep or when I'm not needing or wanting to listen) and I have yet to get the all too familiar "beep-beep" low charge warning.

It's on the home adapter all night long, and when I'm in the car to and from work or whereever and I find I have no need to keep moving the home adapter around the house with the scanner. Plenty of juice. I attribute this to the relatively expensive rechargables...but now 3 months into my ownership I have yet to find myself holding a dead scanner and know I would have already eclipsed the cost of the rechargables had I gone the normal battery route.

Hope this helps....I'm going to go knock on wood now. =)

Now for a question I have regarding trunking. When I first set up the trunk system to pull in Fayette County's EMS/fire etc channels it worked like a top...even living 20 miles from Lexington. However, I'm no longer hearing anything EVEN IN LEXINGTON and I'm wondering if this is because trunks and conventional channels can not co-exist on the same bank.

Any help would be appreciated. I still get the "bars" indicating activity on channels...and can hear it when I turn off "trunk" but squelch is never broken when trunk is active.

Thanks for your help in advance.

From: spampot@prawnworks.com
Topic: 953 Message: 955

I think being able to recharge the batteries in the unit is a huge bonus. Jennifer, buy 4 NiCad rechargables for the unit and just plug it in overnight. I've never run out of juice provided I charge it at least once every 2 days (constant use). It's a good idea to let it run down once in a while though to keep the NiCads in shape.

JWB, you should be able to scan trunked and conventional channels at the same time in the same main bank but not the minor bank (main banks being A or B and minor banks being 1-50, 51-100...451-500) provided you have the Pro-94A. Keep the trunked and conventional separate. Your problem might be that you didn't program any talk group IDs? When you see the bars indicating activity, press the SRC button and it will search for talk groups. If you are scanning and not searching, it won't get anything if you don't have any programmed. Once it picks up a talk group while searching you will see a set of numbers (like 16 362). You can then save that group and program it within the trunked bank. Personally I program my favorites but use the search a lot too. The manual can probably explain how to program the groups better than I can.

956. Scanning trunks on Pr0 94 vs. Pro 92

Yahoo group: pro94owners
Date: 2001-03-14 15:04:57 UTC
From: OzoMan@hotmail.com
Topic: 956 Message: 956

Does anyone have any experiece and opinions on how the two RS scanners stack up against each other on their common trunk scanning systems? i.e; motorola and EDACS?
I have a Pro 94 (not an "a") and am pleased with it, but I am interested in the pro 92's ability to program tone squelch codes. So, I was wondering if I should go the expense, or find a different scanner to use for tone squelch decoding and keep the Pro 94 for trunking (no real uniden/johnson trunks in this area).
Any comments greatly appreciated!
thanks,
Mike Jones

Topic: 953 Message: 958

Using a 94A I can scan trunked and conventional in the same group of channels; I have CALTRANS, sheriff, CHP all in one bank and it works fine. Actully, there's litte enough activity on the CALTRANS system that I leave it in trunk SRC mode, but it hears the conventional service, too.

959. Too Many ID's

Yahoo group: pro94owners
Date: 2001-03-15 17:09:50 UTC
From: Ken Mortellaro
Topic: 959 Message: 959

Here's my question....I have programmed all 27 Motorola II frequencies for Portland, OR in bank 1. I have also filled all five ID Banks, however there are still a few more ID's for this system that I would like to store in memory and be able to scan them all at the same time. How can I accomplish this??? I was thinking perhaps I would have to program the same 27 frequencies into bank 2 and then just ad the ID's there, however I wasn't sure how that would affect the scanning performance (i.e.. speed, etc...). Anyone's thoughts on how to best do this would be appreciated. The manual does not describe how to set up the scanner for a Motorola Type II system with more than 50 ID's....
Thanks,
Ken in Portland, OR

Hello , ColaMan Here...
I Have Both The 92 & 94. The 94 Has Been With Me For 2 Years & the 92 For 1 Month. The 92 Is An 'A'
So far , My 92 Has Had Problems Following A Simple Motorola Type II 3 Frequency Trunk , Requiring Me To Reprogram
The Freqs Again , Plus The Squelch Threshold Is Too High , Requiring A Modiufication I Can't Do - But I Love The Alpha Tags & Multi Trunk. The 94 Is Great Except For Only Doing Trunks Or Conven.

> I have a Pro 94 (not an "a") and am pleased with it, but I am

PL (Private Line) DPL (Digital Private Line) AKA CTCSS = Continuous Tone Coded Squelch

> So, I was wondering if I should go the expense, or find a

(Uniden Doesn't Do Trunking Systems)
$250 - $350 Is A Bit Much In My Opinion Just For The Lowly PL Encode Decode Feature
To Me It's Just Like The Clothes Hanger Hook In My s-10 Pickup - It's Nice To Have It But I'll Never Use It

Dear Mike,

I have the Pro-92a, the PRO-94, and the PRO-94A. I have not used the tone decodes, so I can't comment, however; I just got home from a trip to Pheonix. I used the Three radios togather, although I used the 92 on only one system due to its slower scan rate.

The PRO-94, and the PRO-94a were programed with identical systems, trunked and conventional in the 94a. The PRO-94a scanned circles around the 94. I was really impressed.

Anyone else have the same experience. My vote might be to buy a PRO-94a.

God bless those scannists

962. NiCad Source: Cheap!

Yahoo group: pro94owners
Date: 2001-03-17 09:37:19 UTC
From: Joe Hathaway
Topic: 962 Message: 962

If cross-posting is a sin, forgive me; I have written before about making up NiCad replacement packs for my BC245XLT, and wanted to share the following, and ask a question about charging:

Brand-new double-A NiCad cells (with solder tabs, which peel off if not needed) may be had right now, for 12 cents to 33 cents apiece at WalMart, IF your store is doing as the one in Midland, Texas, and putting cordless phone battery packs on clearance for 50 cents to $1.00 each. I bought one 4-cell pack for 50 cents, and a bunch of 3-cell packs for $1.00 each. All the cells seem to be 200 mAh 1.2 volt cells. I found them on a clearance rack in the electronics department.

Making up a 4-cell BC245XLT replacement pack is simplicity itself.
Tips:
Glue the cells into a pack, rather than wrapping the pack with tape.
Arrange the pack so only one side has any home-soldered connections (so the battery is not too fat to fit).
Use a BLACK connector probably available free from Radio Shack, clipped from a phone battery in their NiCad recycle box.
Use a meter to check polarity; do NOT assume that the red/black coding on the Uniden pack will match the suplus connector coding.

Now my question for one of you electronic wizards: I would like to make a crude charger for my spare 4.8 volt packs. From garage sales, I have wall-wart transformers in 6 volt and 10 volt outputs. Which would you suggest, and why:
A 6-volt transformer charging one 4.8-volt pack. or
A 10-volt transformer charging a 9.6-volt 2-pack series?

I would guess the 10-volt choice would be closer to the trickle charge function I would prefer, but I really have no idea how much higher the voltage should be over the battery's nominal voltage. Please note that the transformers are of unknown quality. I have no idea of how I would tell if the packs were overcharging, but that seems toi be the Uniden way of providing for customers also, since the BC245XLT has no method whatsoever of telling the status of the battery.

Lastly, is hooking a pack up to a 3-cell flashlight bulb an acceptable way to run a battery to zero, to start charging over with no memory effect? I have tried it once, and found that long after the bulb is no longer lit, the battery will return to almost full voltage if disconnected for a period of time. Is this hidden capacity a result of the memory effect, slowly leaking out of the "vault" of unusable power which was masked by the effect?

Any comments will be very much appreciated!

Joe Hathaway

963. Firmware upgrade available?

Either one should work fine. Use Ohm's law to calculate the value for a series dropping resistor to limit the current to the trickle charge rate for a fully charged pack; resistance in ohms = (charger voltage - battery pack full charge voltage) / trickle charge current in amps. Full-charge voltage is usually considered to be around 1.37 to 1.45 volts per cell for NICDs. Use a 2 watt resistor to be safe. The important thing is to limit the current; you could just as easily charge the 4.8 volt pack from the 10 volt adapter with the proper series resistor.

>I have no idea of how I
>would tell if the packs were overcharging, but that seems toi be the
>Uniden way of providing for customers also, since the BC245XLT has no
>method whatsoever of telling the status of the battery.

Overcharge can be tolerated (by NICDs) for short times as long as you limit the current to the trickle charge rate (one-tenth of the amp/hr capacity usually) as described above.

>Lastly, is hooking a pack up to a 3-cell flashlight bulb an acceptable
>way to run a battery to zero, to start charging over with no memory
>effect? I have tried it once, and found that long after the bulb is
>no longer lit, the battery will return to almost full voltage if
>disconnected for a period of time. Is this hidden capacity a result
>of the memory effect, slowly leaking out of the "vault" of unusable
>power which was masked by the effect?

Again, this is simple Ohm's law. When you discharge a battery, the internal resistance becomes a major factor in driving a load. You drop most of the voltage across the internal resistance, and not much across the lamp. WHen you disconnect a lamp and connect your high impedance voltmeter, the internal resistance becomes insignifigant compared to the 'load' and you read a much higher voltage. Another factor is the lamp is probably not drawing enough current to light, even though the battery is still supplying current to the load (i.e., has some capacity left).

To answer your first question, no, this is not a good way to discharge your battery pack. Since the bulb has no automatic shutoff, you run the risk of discharging one or more cells in the pack beyond zero, which will reverse them and cause damage to the cell. There is a specific voltage per cell (can't remember the exact value) at which the engineers deem a battery to be fully discharged. Discharge beyond this point is not recommended. Discharging a pack in the appliance is usually a safe way to do it, because you eventually reach a point when there is not enough voltage to keep the semiconductors turned on. The device 'switches off' and any remaining current drain is insignifigant.

All bets are off with laptop computers, of course.... :-)

Topic: 963 Message: 966

Okay. 2 in 1 post here.=-}

About 4 weeks ago, I took my scanner to RS and asked them to upgrade it. they took it, kept it for a couple of weeks, then returned it with a note saying "all componentes tested and brought to current specfications" However, I have not noticed any difference whatsoever, not to mention, considering I am quite new at scanning, I don't know how to start checking if the scanner could scan conventional and trunks at the same time. But it does seem to scan better then previously. (the data filter is better at distinguising between data and junk, and I can pick up a few things that I used to not be able too before.) So You may want to ask, though they might just have tested the unit and returned it.

Part "B"-

A While back, I said I had bought a GRE preamp for my scanner. Well, After using it for a while I've noticed a few things. One, It seems to overamplify strong, close signals untill they are cut off by the squealch. Also, it distorts The City's trunked system and makes things harder to hear, when active, but it's clear when I ave the preamp off.
On the plus side- When scanning very weak signals, it gives them quite a boost. I've been able to extend the range of my scanner quite a bit, by choosing when to use the preamp, and when to leave it off. i can actually pick up some of the 2 meter ham repeaters about 30-40 miles from where I live with the preamp, when I can't without it. all in all, I think it's a good product. Thanks whomever posted the link to the RS site that had it.

967. Pro 94 Upgrading - Debunking The Myth

Yahoo group: pro94owners
Date: 2001-03-18 14:11:41 UTC
From: Billy Bearden
Topic: 967 Message: 967

Hey Guys....
Last Year , During The Great Pro92 Upgrade Movement , I Thought - Hey They Could Do That To My 94 Too !
I Told Everybody On This Board & On Strong Signals That I Was Going To Set Off On Trying To Get My 94
Upgraded To A 94A & GiveRegular Updated Postings On Progress.....
Nobody Cared.....
I Called The 1-800-THE-SHACK & Asked About A 94Upgrade.... Can I Do It ?
"We Are Not Aware Of Any 94A Scanners" OK Fine , But There Is. Can I Do It ?
"It's Not Under Warranty" OK Fine , I Am Willing To Pay For It , Can I Do It ?
" Your Estimate Is $68 - You'll Need To Put Down $20 Deposit" Great !
Went To 2 Radio Shacks To Find One That Would Help - The One 40 Miles Away Agreed.
" It Will Be Approx. 1 Week To 10 Days To Get It Back Sir" Great !!
I Passd This On To The Scanning Faithful - Nobody Cared....
5 WEEKS LATER
After Many False Hopes , Run Arounds , & Dealing With Idiots I Got My 94 Back -
With A Brand New Face Plate !!!!
Hello ... McFly ... Anybody Home ? This Is Not What I Ordered. This Is Not What I Wanted. This Is Not What I Needed.

they took it, kept it for a couple of weeks, then returned it with a note
saying "all componentes tested and brought to current specfications"
However, I have not noticed any difference whatsoever, not to mention,
considering I am quite new at scanning, I don't know how to start checking
if the scanner could scan conventional and trunks at the same time. But it
does seem to scan better then previously. (the data filter is better at
distinguising between data and junk, and I can pick up a few things that I
used to not be able too before.) So You may want to ask, though they might
just have tested the unit and returned it.

Topic: 968 Message: 968

After some research, I am looking for two specific antennas.

Anyone know how I can get my hands on a Welz WS1000 or a Watson W889 antenna? My first choice is the WS1000, but I realize that it is normally sent with a radio, so I would settle for the Watson. Can anyone point me in the right direction?

Thanks in advance.

I, for one, am VERY interested in being able to upgrade my 94 firmware to the 94a, especially after reading Dan's post http://groups.yahoo.com/group/pro94owners/message/961

So, can ANYONE answer as to whether one can get an upgrade?

Dave

>
> A While back, I said I had bought a GRE preamp for my scanner. Well, After using it for a while I've noticed a few things. One, It seems to overamplify strong, close signals untill they are cut off by the squealch. Also, it distorts The City's trunked system and makes things harder to hear, when active, but it's clear when I ave the preamp off.
> On the plus side- When scanning very weak signals, it gives them quite a boost. I've been able to extend the range of my scanner quite a bit, by choosing when to use the preamp, and when to leave it off. i can actually pick up some of the 2 meter ham repeaters about 30-40 miles from where I live with the preamp, when I can't without it. all in all, I think it's a good product. Thanks whomever posted the link to the RS site that had it.

Is this obvious to anyone but me?

Sell your Pro94 on eBay, rec.radio.swap, or through your local classifieds. Trot down to Radio Shack with the money and buy a 94a. No muss, no fuss. Sure, you will take a loss on the sale, but you were willing to pay for the upgrade anyway, right? If you catch them on sale, you might even pay less for the 94a than you did originally for the 94.

975. Does the box tell if it is an "A"?

Yahoo group: pro94owners
Date: 2001-03-19 14:35:39 UTC
From: hilgerone@yahoo.com
Topic: 975 Message: 975

Been waiting for the 94a to go on sale but I think I'm going to have to break down and pay full price. (tired of waiting). What I need to know is, does the catalog number on the box include the "A" or do I need to make them pull out every scanner to check on the back?

Thanks
Matt

976. Re: [pro94owners] Does the box tell if it is an "A"?

On the back of the box in the Date Code it will say 005A00 or something similar. It indicates that the unit was manufactured after May, 2000. So look for date codes of 005, 006 etc...

I cared!!!! It took me this long to wipe my eyes....Only joking with you. Hey, Places like the The Shack have you by the squelch tail...Can't win...Minimum wage sales; flammable suited execs., and a technical dept. 2nd to none!!!! Had a problem once with the old pro 43 and they lost it! They wanted to offer me another model on the DISCOntinued list or a more expensive base model. Swore I was gonna have "the big one" right there. Didn't have the heart to grab the joker by the neck so I APOLOGIZED and made myself a more discerning shopper...only to be duped by their 92 and 94....You have more fortitude than me..I admire you ColaMan...I went out and layed down 199.00 for the 94A so I wouldn't go through their torture chamber again. I don't get to check the list but once in awhile but I share your pain on this one...I think we are all recovering from "THE SHAFT" ...You got questions.....Maybe Uniden will come up with a trunktracker III handheld: 1000ch., alpha/numeric, PL, attenuator, rotary frequency tuning...any split we want, and maybe even digital capable....Then we won't need to deal with those who couldn't last a day selling water in the desert. I'll drink to that!!!! All things considered, you did try to help others out. I appreciate it. Let's make this list rock...or we can see eachother at the new TT III: Bearcat 911 site. It's a better plan than "The Smack"

The aircraft freqs are AM (108-136.9875MHz) while the rest of the bands
covered by the Pro-94 are FM. (Check page 74 of your owners manual.)
Good luck.

And to answer your question Valerie no there is no
switchable function between AM and FM Freqs you cant
dial in a freq and click a switch and get AM or FM
they are preset to what they are.

Yes Earl thats what you said but it wasnt exactly
answering the question :)

984. Pro-94 factory set trunking freqs

Yahoo group: pro94owners
Date: 2001-03-26 18:46:34 UTC
From: smurf123@btinternet.com
Topic: 984 Message: 984

Dear Group
I have gone and reset my pro94 (pressing 9/2-switch on) I lost the trunking freq's that were in it when I got it new. Can anyone tell me what these freq's are, I know its a lot to ask but I am in need of help. as I do not have that guide to trunking frequencies that comes with the scanner, there wasn't one with mine. I did phone r/s and they said they would post me a copy but I never got anything.
thanks
Valerie

????

Mine was empty when I got it new. How could the factory know what frequencies you need for your area? For that matter, we can't know either unless we know where you are.

Y'know I bet the scanner you bought "new" was actually a returned unit someone didn't want for some reason, that already had been programmed....another reason to watch the cur dogs at RS!!!
One more thought....was it supposed to be a 92A? If it was a recent purchase, make sure the scanner has an 'A' in a block after the catalog number on the F.C.C. ID tag on the back of the unit. If not, return that sucker and get the one they SHOULD have sold you!.....(those bastitches!)

From: smurf123@btinternet.com
Topic: 989 Message: 989

Hi again group.
This might sound a little wierd, but can anybody point me to a web-site that has the sound heard on a trunking channel. you see, I live in the UK and trunking over here is still a bit thin on the ground so to speak. So therefore I think I must search myself, I have the frequencie limits that are used in the UK, (ie 168.000 to 172.000 etc) but not the actual frequencies themselves.
any help would be very welcome
thanks
Val

Hi
A lot of people state that there will not be a scanner that can pick-
up
digitial signals, there is already a program on the web that will let
you
de-code digitial mobile phones conversations, So I can't see it
taking long
before we have a full blown digitial scanner, Its like software
piracy, no
matter what they use to decode the software, somebody will crack it
and copy
the software.

1003. Music City - A Trend?

Yahoo group: pro94owners
Date: 2001-03-31 15:23:01 UTC
From: elliston@ix.netcom.com
Topic: 1003 Message: 1003

I recently spent the better part of a week in Nashville, and my Pro94 went along. Yes, that trunked DIGITAL system is up and running, and I understand it has been for quite a few months. Here's the good news - the old VHF system is still running, analog, of course. I don't think this is a transitional simultcast to allow them to phase out the remaining old VHF equipment. There's simply not a police car or any other public service vehicle anywhere in sight with the old VHF whip. Moreover, the old data bursts that characterized their VHF system are gone, and the audio quality is greatly improved. The system leaves you with the impression that it it is there because someone wants us to be able to listen! Anybody got any ideas or inside information? Could it be that the press or "cops spouses at home with scanners" prevailed? Could this be a trend that Motorola will encourage other cities to follow until that magical digital scanner arrives? After all, they claim that they don't go digital to keep us from listening.

1012. Pro 94 Observations

Yahoo group: pro94owners
Date: 2001-04-06 20:34:51 UTC
From: dschopp@sprintmail.com
Topic: 1012 Message: 1012

I had my Pro 94 (not a A model) for a day now and thougt I would post my observations. The only trunked systems where I live are Motorala Type II and the 94 does a great job of tracking them.

I also found that the 94 is a very good conventional scanner, especially on VHF Hi. In my area there is a lot of activity between 153 and 159 mHz and the 94 is very sensitive on those frequencies.

I previously owned a BC 245 XLT and I prefer the 94. I hate the Uniden battery pack, I really like running the scanner on AA batteries. I also like the flatter case of the 94, I think it fits in the hand better than the 245. I also like the size of the 94's display. The audio of the 94 is muffled and not very strong, that is a problem in a noisy environment.

I also don't miss the ability to trunk conventional and trunked banks at the same time. I think the 94 is a very good conventional and trunked scanner.

Go to Radio Shack and get one of the external lapel speakers like the police wear on their shoulders. (page 94 of 2001 catalog, item 20-009 $9.99) The speaker is little but it greatly improves the sound, and you can wear the scanner on your belt and the speaker up close to your ear. (That is if you don't embarrass your teenage son to much, like I do!!)

Yesterday Yahoo(trading symbol YHOO)announced its quarterly Earnings and they where not good.So if you really have any questions you feel you need to ask of the Group(while it is still here)better ask soon or maybe we wont be here!
For those of you who may remember or used "POWWOW" it was taken over by CMGI last year and since there stock has dropped from $136 to $3 bucks,it has discontinued the site and it was "BIG" all over the World.
Here are some excerpts from Reuters.

pro94ownwers-owner,
Harry

PALO ALTO, Calif. (Reuters) - Internet media giant Yahoo! Inc. announced on Wednesday that it was making its first layoffs ever -- cutting its staff of 3,510 people by 12 percent after reporting a net loss for its first quarter and a sharp drop in operating profit.

Yahoo Chief Executive Tim Koogle said in a statement, ``We strongly believe such discipline is necessary to the overall health of the company,''

In addition to reducing its staff of 3,510 employees by 12 percent -- or about 420 people -- and exiting non-core businesses, Yahoo said it will discontinue or reallocate some ''secondary services,'' cut discretionary spending and promotional expenses, outsource some operations and centralize some of its global businesses.

Chief Financial Officer Sue Decker told analysts that ``no stone was left unturned as far as where we could save costs.'' The company said it was unable to say which services might be discontinued since it was still in the process of reviewing them.

There are other types of mailing lists that can be used, should Yahoo choose to discontinue this service. We'll just move somewhere else. :-)

That would be OK if it were a moderated group. Otherwise it would just look like rec.radio.scanner and alt.radio.scanner -- full of junk! I think, for our purposes, a mailing list is a better approach.

Billy,

On the back of the scanner where the product number is, after the number, there will be a box with the letter A in it. this is the pro 94A.

The Pro-94A has the capability to scan trunking systems and
conventional systems at the same time. The Pro-94 lacks this option.

Question- in order to test this, what button combination would you push to trunk both at the same time?
I tried to have my pro94 updated, and I have no idea how to scan both. would you go into trunk mode, and then choose non-trunked banks, or vice versa?

Yes you want the Pro-94A with cat# 20-524 A in a square, the fastest
way to tell if the unit in the box is an A model is look at the back
of the box it comes in, and it will have a production date, the first
of the new models started with 05A00, and this date will be on the
back of the Pro-94A.

If you have a Pro-94A the only button pushed is the trunk button if the unit is scanning, and the scanner will begin to scan the trunking and conventional systems.

Good luck in trying to get your unit updated, its almost impossible according to the different articles I have read. The only changes between the two models is an EPROM and the users manual.

> From: "Gregg Alemy" <embalmer@...>

Gregg,
Sorry , The 94A Is Not New - It's About A Year Old.
I've Got Both The 94 & 94A . Here Is A Review For All
To Read .....
First - YOU CANNOT UPGRADE ANY PRO94 TO A 94A! I've Tried , It Don't Work,
Useless Effort. Give It Up.
The Pro94 Is Marked Dual Trunking Because It Only Follows Either Up To 10
Trunked Systems (Mot & EDACS)
Or Up To 500 Conventional Freqs At A Time , But Not Both Simultaneously. I
Find It Receives Better
Than A Pro92 & Pro90. Audio Is Kinda Weak. Great Little Scanner.
The Pro94A (Marked Like This On The Back = RADIO SHACK cat. no. 20-524
[A])
It Also Is Marked Dual Trunking , But This Version Tracks Both- Up To 10
Trunked Systems & Conventional Freqs Simultaneously. The A Version Is Also
Blessed With A Auto Backlight Feature That Comes On (If Selected)
With Each New Transmission. The Audio Is Still Weak. The Only Fallback I
Find Is That If You Want To Only Follow
A Trunk System , Then You Must Lock Out The Conventional Ones , Or If You
Just Want The Conventional Freqs , Then Lock Out The Trunks. Otherwise There
Is Only A 1 Second Delay ! Not 2 Or 5 Like Other Scanners & This Is A Better
Scanner.

Gregg,

If I understand your question, if you have the switch inside the radio on the Alkaline side, you can run it on an AC or DC adapter with no chance of damaging the radio or batteries. Of course, if your radio will always be run on the adapters, why even bother with batteries unless you know you will need them.

I don't know if I am the only Jennifer or the only woman in the group! lol
But I am in Texas, just south of the Houston area and about 20 mins from
Galveston in a small town. I primarily keep my scanner on my local PD, EMS
and FD. Those are the only ones I really want to hear anyway. Can't jump in
my car for anything good when I am listening to the larger cities instead of
small town life, where the PD ends up going to calls on a dead body, that
ended up being a prank. Go figure! lol I can check out what I have in
regard to codes and share with you what I have, if you would like.
Have a great day!!!

I keep my batteries in my scanner, I have adapters for both my home and van.
But there are times when I am away from the van, (baseball games and
practices) that I still enjoy listening so I try to keep the batteries in it.

I went to my Radio Shack a couple of months ago and go the Pro 94.I had not been into scanning for a while so I joined your group. I kept hearing about the Pro 94 A and was about to kick myself in the ass for not doing further research and getting the 94A.
I've noticed that lately when I have it set to trunking , I seemed to get the trunked and conventional stations as well. After reading the messages today ,I got out the old trusty Phillips and took the belt latch off the back of the radio to check the serial numbers...
I had gotten the 94 A without even knowing that I should have.
Damn.....I'm a happy camper now.....Thanks for all the info I have received on this list.....Sluggo

1046. About to buy a Pro-94: Am I making a mistake?

Yahoo group: pro94owners
Date: 2001-04-27 18:15:35 UTC
From: crodgers@atc.army.mil
Topic: 1046 Message: 1046

Greetings to all!

I bought a Bearcat 205XLT handheld back in '91 and it finally died.. I was looking all over for a 3-500 channel handheld and the pricing seemed to be in the $160-$200 range.. Now, good ole' Radioshack has put on-sale the Pro-94, so I can get a whopping 1000 channels for under $200!!! Wow, I am excited, to say the least!

Anyway, I just want your opinions: good or bad.. Now that you have one, are you happy? I know nothing about Trunk Tracking, etc. I just used my old Bearcat for local Police, Fire, Rescue, etc..

Before I part with $200 of my hard-earned cash I'd like someone to either tell me "it's all-right" or suggest an alternate radio in the same price-range.. Believe me, I've looked: E-Bay, on-line classifieds, ham web-sites, etcetera and this thing with a 1000 channels for under $200 seems to be the best buy going..

Please let me know if I am wrong.. Feel free to e-mail me directly if you wish..

Thanks!

Chris R.

My experience coming from a Bearcat XLT2500 is:

If you have trunked police, fire etc, you want a trunked scanner. Talk-id's are better than your old list of static frequecies. I like using AA Batteries, can always have spares ready to go. I don't use anywhere near 1000 frequencies but it's nice to know they are there. The Autoscan feature will let you search weather, marine, police and Ham quickly (and blindly missing a few frequencies I hear) and is kind of like the weather button on the XLT with electric windows (I do use the search when I take the scanner out of town and don't know anything about local freq's)

As far as the Bearcat I miss not being able to search a range and automatically fill up banks with frequency hit's. On the Pro-94 you can manually save 10 frequencies searching a range and manually move them to a bank. I use to leave my scanner on overnight scanning a range and see what I would hit the next day, sometimes filling up mega channels.

You want to be sure that on the box or on the serial number on back of the scanner it has an 'A' which is the updated pro-94. The A can scan conventional and trunked at the same time and help you find your keys in the dark if you loose them (the flashlight feature or backlight on mode).

I'm happy, get it for under 200 because it seems to go on sale quarterly and why pay 300.

Chris. ..

Chris

The PRO 94 has had little complaints and few returns.Most of us here at the group I believe own the Pro 94 beta model.The PRO 94A has only been out about 6 months and from what I have heard,it is the better of the Two.I am content with mine and I monitor a EDAC'S system.If you are in the Military this radio picks up 400mhz.I have heard people really like it for military transmissions.Search the archives of the group.Try searching 400mhz,you will find messages #365 to #370 relate to it.
You will find the "Archive" a very useful tool for Topics in the Group!
" BUY " and ENJOY!

I bought my 94a last August. Date code 05A00.

Get the soft leather carrying case for it. You won't be sorry.

I purchased a PRO-94 last week. I started out in scanning with one of those binary Tennelec scanners and I can program my PRO-2006 in the dark. Someone said to read your PRO94 manual ten times, and I would agree with that. Programming the trunked frequencies was a bit more complicated than I thought. I still don't have it down right. I'm trying to get Kansas City, MO, programmed in. I get some comms, but not the police during the day. I get city employees and what sounds like personal phone calls. I'm sure it has something to do with the "talk groups" and I *will* figure it out when I get some quiet time to read the manual.

My local police are on 453.30, and I get some sort of buzzing when that channel is active. there's no noise on my PRO-51, and on the PRO-94 I get a lot of honking and hooting, as if it's pager interference. That also does not appear on the PRO-51. I thought the PRO-94 was triple conversion, which should reduce the images, intermod and interference.

On the whole, after a week, I'd rate the scanner a B+ or maybe an A- and have no regrets about purchasing it. From my work location, i can hear three weather stations using just the rubber ducky antenna.

One thing I do like is the 50 channels per bank. I can program in all my local city and county public serice agencies into 49 channels. It's really nice having more channels than I need as opposed to almost enough channels.

1052. Thanks to everyone who replied, I'm buying one!

Greetings!

Thanks to all who took time to reply to my "Am I making a mistake?" message. The replies were well thought out and VERY valuable to me.. I'll be buying one this week and probably spending the next two weeks reading and re-reading the Owner's Manual!

Chris R.

P.S. Does anyone have any good links for good, up-to-date, frequency databases? I live in Maryland and would like to find out what all of the Police, Fire, and Rescue frequencies are in the state without having to shell out another $7 for the guide that RadioShack sells..

1054. Vertex?

Yahoo group: pro94owners
Date: 2001-04-30 15:15:12 UTC
From: John R. Fleming III
Topic: 1046 Message: 1054

Hey everyone,

I was wondering if anyone has run into a Vertex VX-10 model FM Transceiver. I found one almost "in the trash" with the charger and belt clip. Is there anything I could do with it? It seems like it is a pretty decent unit, but I can find very little info on it. Should I hang on to it and hope to find something out about it, or should I throw it up on Ebay?

Thanks for any input...

Those have all the info you'd ever want on the radio.
It seems cool, but unless you would have any application for it (and honestly, there seem to be quite a few potential applications), I'd try for eBay, or perhaps name a price on a mailing list or usenet group oriented to buying/selling radios and see what you can get for it. =-}

1060. Power Requirements

Yahoo group: pro94owners
Date: 2001-05-03 01:53:13 UTC
From: ClubDJMT@cs.com
Topic: 1060 Message: 1060

Ok kids...here's a quick question. Upon completing a minor backlighting mod to my '94 (flat, white LEDs), I noticed that I thought I had made a miscalculation for resistance from the battery supply. Well, I had calculated for the 9.0v / 300mA requirement, as stated on the back panel, near the DC input, and I didn't even think about the difference in battery supply, which is 1.5v X 4 (6v). Why is this? Is it added amperage and voltage for charging? Any and all info is much appreciated.

--- Joe
Worcester, MA

ps-
oh, by the way, if you want to know more about the LED backlighting mod, email me and I'll tell ya what I did. Thanks!

To charge batteries, you need a source voltage equal to or greater than
the full-charge voltage of the battery back (about 1.37 volts per cell,
in the case of NiCDs). The radio itself runs from the nominal pack
voltage (figure 1.2 v/cell for NiCD, 1.5 v/cell for alkaline). To
calculate series resistance for the LEDs, you need to know the voltage
drop across the LEDs and the anticipated operating current for the
LEDs. Then divide the _difference_ between nominal supply voltage and
LED voltage drop by the LED current (in amps) to get resistance.
R=E/I, where E is Vpack-Vled.

Topic: 1060 Message: 1062

Thanks for the info Jim. I already knew all the calculations for LEDs and all that formulatic info...I'm going to school for Electrical Engineering afterall. ;-) My main question was about the difference in voltage between the on-board power and the external power. I figured as much that the ext. power was greater for charging reasons, which is absolutely fine considering I actually wired the backlighting into the input from the charger so I can see it at night. Thanks for the info though! :) Happy Scanning!

There isn't one that I know of. The irritating thing is that the scanner will work quite a bit longer after the low battery warning starts, provided you can live with the beeping.

Gerry,

You're exactly right. If you're using alkalines, the darned thing will literally beep for a day or more before the batteries become unable to power the scanner. I once had a Radio Shack manager to tell me that the alkaline batteries were one of their highest profit items. Do I smell a confict of interest? There are actually folks out there that would go ahead and buy a new set of alkalines to get rid of that beep. It would be interesting to know whether the Pro94's Uniden Bearcat cousin has the same beep. I've had several Bearcats, and they consistently gave visual, but not audible, low battery warnings.
A long time ago, on December 31, 1987, when the date limited operating system on my Model 4 TRS80 mysteriously quit working, I became suspicious of the Shack's efforts to exploit their existing customers.

do a search through google for pro-94a. (I think) or
scanner mods. I found a spot which has them but don't
have the info with me. But search the net. The truth
is out there.

1070. Cordless frequency listing

Yahoo group: pro94owners
Date: 2001-05-08 13:53:37 UTC
From: crodgers@atc.army.mil
Topic: 1070 Message: 1070

Hi gang!

I know from reading a lot of scanner enthusiasts web-sites that one of the most often asked for listings is for cordless phones. I've been through dozens of web-sites and have seen the same listings over-and-over that cover the Panasonic KXT-9500, a Tropez DX-900 and the old 46/49Mhz frequencies.

What I have yet to find is a TRULY comprehensive listing of cordless frequencies by manufacturer (e.g. Panasonic, V-Tech, Uniden, AT&T, Bell South, Toshiba, Sanyo, RadioShack, etc.). I know what the frequency range is, but I would really like to find a listing of base frequencies by manufacturer if possible. By the way, my intentions are strictly legal here since what I want to be able to do is to show my friends and family that their el-cheapo [read:analog] cordless phones are able to be monitored since everyone always calls me for a recommendation on a new cordless (I'm 'the electronics guy' in the family) and they ALL ignore my recommendation because it is "too expensive.." (I've been recommending the new 2.4Ghz Digital Spread spectrum models, by the way Toshiba has a nice one that's only $79 the SG-1700) most of them don't keep the instruction manuals so I'll have to find the frequencies on my own in order to make the point I want to make; thus my plea for help..

Thanks in advance for any and all help..

Chris R.

Good idea, but wasn't it determined that even the ghz-range phones were scannable? Correct me if i'm wrong, but I think that was discussed earlier. (Though it could very possibally have been on usenet, and not here. =-})

From: john stuart
Topic: 1072 Message: 1072

Hello There:

Well believe it or not, I've been a member for six
months but never posted a message. Till now, I've
watched and wondered about something. Wondering how
and
why I caught this scanning bug to begin with. I must
here and now confess that my purchase of the PRO-94
was primarily motivated by a curiosity to hear what
other people were saying. Not only from a far but also
very near to me.

This raises a very interesting moral question. The
rights of privacy VS my insatiable desire to snoop
into other people's private affairs.

Of course it would be easy to say that scanning is a
study in human nature, or that abuse of power ocurs
only when knowlege is misused for private gain. But it
still begs the question: WHY DO WE LISTEN AND WHAT ARE
WE LOOKING FOR? ALL THE BEST loopcat..

From: Chris Hartzell
Topic: 1070 Message: 1073

well, at the risk of being flamed for this here goes:

I must emphasize that this list is FOR IMFORMATIONAL PURPOSES ONLY!! It is illegal to scan these frequencies even if you are using it to show friends how unsafe their conversations are.

With that aside, you wanna have fun with you friends that have the new digital "secure" cell phones and show them that even these are not safe to talk on program in the following frequencies into the pro-94. You may need some sort of amplified antenna for this to work.

1281.575
1281.5875
1285.1375
1285.150
1293.700

These are not cell frequencies, however i think they are higher deviations (sorta like mirror frequencies) of the original freqs. With this in mind, the normal 2.4 ghz phones may not even be secure. Half 2.4 = 1.2 (i know there is another mathematical function I'm forgetting) and that falls in or close to a scannable range. The spread spectrum is what would mess up the scanner.

Anyways, hope this helps you out in your quest to inform your friends.

As always, I take no responsibility for the information contained in this e-mail. If you get caught using this information, even if showing your friends, it is solely your responsibility. I am merely a doorway to the information. And information is perfectly legal.

Chris

Well if your over at the house where the phone is look
on the bottom of the base. All phones are required by
law to have the freg range that it uses printed on it.

1075. Re: Cordless frequency listing - thanks for the replies!

Yahoo group: pro94owners
Date: 2001-05-09 15:46:38 UTC
From: crodgers@atc.army.mil
Topic: 1070 Message: 1075

Thanks to all who replied! Let me clear-up a few points, I am doing this solely as a demonstration, to prove a point to friends and family members that have consulted me for information regarding what cordless to buy and who then just ignored what I told them and bought the cheapest thing out there (900 Mhz analog phones). In my state, (MD) it is legal to monitor the frequency as long as BOTH parties give their consent, and since this is just a demonstration, I will obviously get their permission to do this..

I also know that I can get the frequency range from either the User's Guide or the base of the phone but that typically means I have to scan 40-60 channels to see if I can lock onto their signal..I just thought it would be easier if I knew the base frequency..again, this is simply for demonstration purposes only, I am not a voyeur (don't even watch 'Survivor'!) and could care less about what people are talking about - I've got two toddlers so it's not like I've got all day to just sit-around and wonder what the neighbors are up to..anyway, maybe this was a bad idea to begin with, I just got peeved that people call me to get recommendations, make me do all of the work to find them a good deal and then ignore my recommendation because they saw some cheapo 900Mhz phone on-sale for $19 at K-Mart..

Anyway, I appreciate all of the replies, just to add a little knowledge, any "Spread Spectrum" phone is impossible to monitor since it switches frequencies at rates up to 100-channels per second in-concert with it's base station. Most, if not all, Spread Spectrum phones are digital, and to my knowledge, no one has devised a (commercially available) scanner capable of de-crypting digital communications.

As I said, I've been recommending that friends and family members buy 2.4Ghz Spread Spectrum phones because of their increased range and immunity to monitoring. I just bought a Toshiba SG-1700 at Target for $49 on-sale and then went out to the Toshiba web-site and found a $10 rebate coupon! I checked back at Target yesterday and that same phone was back up to selling for $79! Even so it is a nice little phone..

Thanks again for all of the replies..

I'm thinking of hooking a pre-amp or "active antenna"
to the PRO-94. It might increase the range over the
standard whip. Any thoughts on the matter?

> communications.

Correct, if the phone really does what the name implies.

However, there was some discussion a few months ago about how the manufacturers are stretching things when they put all the fancy buzzwords on the box. For example, there was one "2.4 GHz" phone which was only 2.4 GHz in one direction -- the other direction was 900 MHz and was easily received with a scanner.

So it's possible that they are playing similar shenanigans with terms like "spread spectrum" and so on.

I agree about the digital phones. I had a VTech digital phone that I was not able to receive on the scanner.

Here's an idea you might want to try!

We recently moved to a "new" older house. One of its gadgets is one of those 70's era NuTone intercom systems, the kind that had a speaker in every room. The AM-FM still works great, but there's also a PHONO setting. Close examination reveals a PHONO input jack neatly hidden under the bottom edge of the master unit.
Add a cable and one adapter that are readily available at the Shack, and Presto, the Pro94 is in every room, or any room you select from the master unit, with audio quality that will rival the finest base units!
WARNING -- Don't try this unless your spouse shares your scanning enthusiasm!

I read something in this vein on r.r.s. a day or two ago - someone was selling a wireless headset that can be used for AM/FM, or scanners, or whatever you want to listen to. A battery-operated transmitter plugs into the radio, and the headset worn to listen privately to whatever the base unit is plugged into. You may even be able to walk some distance from the radio itself within the house.

1081. Problems with my Pro-94

Yahoo group: pro94owners
Date: 2001-05-28 16:17:00 UTC
From: Ron
Topic: 1081 Message: 1081

I purchased my scanner 5 weeks ago. Naturally, just a week too late to return it to Radio Shack, I'm having trouble with the ID Scan mode. It has an "automatic squelch" supposedly built in but more and more often this thing will break out into the loud hiss associated with a poorly set squelch. I contacted a friend who has (I believe) a model 92 and he has the same problem.
I'm also having a harder time with reception of my local police department than that of a department about 15 miles away, though both departments are on the same antenna / trunk system.
So do I (and my buddy) have lemon radios?
I also have problems with my pro-75 which keep me from monitoring any of the 400 mhz bands due to bleedover (always from the same unidentified police channel out of Houston). Had the same problem with other previous RS Scanners. Mabe its time to look at another brand?
I may or may not get back to this group quickly so you can copy your replies to my email at kentexian@..... thanks
Oh, also open to suggestions on small antennas. Have heard sometimes too good reception can interfere with scanning capabilities by overloading something or another but I wasnt really paying attention at the time. I'm far from a radio tech, so keep it in laymen's terms please.

1082. Re: RS's Freq guides

From: Ron
Topic: 1046 Message: 1082

If you're referring to "Police Call", it's much more than $7.
While this is usually an excellent and accurate book, the current issue is not. This is not a fault of the book's publishers so much as it is due to so many departments and businesses going to trunking, and their sharing of trunking systems. I have found that probably half of the businesses and departments/agencies I listen to are listed incorrectly in this latest issue.
It is fine for most people who havent gone to 800 mhz but then a lot of the old frequencies have been turned over from police frequencies to smaller agencies or businesses. This Volume 7 for 2001, I feel, was a waste of money for the most part. I don't see much they could have done to make it any more accurate and I dont blame the publishers but it simply is not an accurate guide in many instances.
The small white trunking freq booklet was more helpful, and that combined with the trunking frequencies that WERE listed in Police Call, got me started and after about 10 days I was able to research and identify most of the frequencies / call groups for my area.
Accurately? Only time will tell.
Try the following link to get you started... The internet has a lot of answers, you just have to hunt it down with searches.
www.perconcorp.com
Also you can pick up information and links from newsgroups.
Good luck.

Nahhh, I'm having some of the same problems. I've temporarily given up on programming KCMO's system. I got KCK's in and I'm getting what I *think* is trunking scanning. However, I don't get the frequencies displayed, just what appear to be talk group numbers. The problem there is none of the numbers I see correspond to what I've seen posted here. I attribute the whole thing to me not taking an afternoon and sitting down with the scanner and the manual and figuring it out.

From: Richard Dale
Topic: 1046 Message: 1087

>Can anyone recommend a good, available, accurate scanner database?

You have two choices -- What Others Are Hearing or the FCC database. The former is sometimes pretty accurate, but is unfortunately only local in nature. A few years ago "Monitoring Times" published a list of Kansas City area frequencies. I programmed in a "new" police frequency and was surprised to hear activity there. Of course, that "new" frequency wasn't real at all, it was just 5 kHZ off the actual frequency!

I believe that Police Call and others get their information from the FCC database. Of course, that's not always accurate either, I have no cites for VHF, but the FCC database lists three stations on 540 kHz for the same area, and that can't be right. It also makes me wonder how, if someone uses the FCC database, they can "copyright" it and put in "fake" information. That database is taxpayer-funded! They can charge for their time and expense, but they can't claim the database to be theirs!

From: Marlo Montanaro- KA2IRQ
Topic: 1046 Message: 1088

One must remember that the FCC database, and Police Call, are both a database of licenses... nothing more.

It would be nice if communications on a frequency could be identified by the licensed user... but that is not reality.

Remember those fabulous new programmable scanners of the late 70's?
They had a key labelled "SEARCH." This meant we didn't need a
frequency list!
Now, if the letters have worn off some of your Pro94 keys, get out
your manual and rediscover that key labelled SRC. It works better
than any frequency guide I've found.

From: John R. Fleming III
Topic: 1092 Message: 1092

Good afternoon/evening all,

I have a question I am sure someone has stumbled upon in the past... I am after a method to get the backlight on the pro-94's display to stay "always on" rather then using the button that allows light for just 15 seconds. My guess is that many people were after this same "hack"... Does anyone have any ideas? Any help is greatly appreciated...

Thanks,
John

Yes, FM has sidebands. THey are different in nature, of course, than AM sidebands. There are certian known combinations of modulating frequency and deviation level that will result in the carrier disappearing entirely and only sidebands remaining; a handy method of calibrating a deviation meter if you have a spectrum analyzer with narrow filtering.

Press and hold the light button(keylock) as you turn
the scanner on... you should see the message Aut Lit
on.

IT doesnt stay on always but it will come on as soon
as you hit an active freq.

To reverse the process(mostly to save battery life) do
the same thing you will get the message Aut Lit off.

1097. PRO-94 Search Mode Question

Yahoo group: pro94owners
Date: 2001-06-10 17:00:03 UTC
From: WeatherAlert@aol.com
Topic: 1097 Message: 1097

After briefly searching the archive, I still have the following question...

I must admit, it's not a technical question, but it did stump me. Maybe someone here would have the answer.

Regarding the PRO-94 Search mode, where you can search frequencies for a particular band (e.g., wx, ham, air, etc.), I have the following question:

I put my scanner on SEARCH of the HAM (Amateur Radio) Band on the PRO-94. I am curious why the scanner jumps from 2 meters to 70 centimeters, and doesn't search the 220 band, when the scanner DOES receive the 220 band. It just jumps from the high end of 2m to the 70cm band, passing up 220.

Does anyone know why it was manufactured like this?

Thank You.
Sincerely,
Josh Gelman
KB3GIO

Press and hold the light button(keylock) as you turn the scanner on... you should see the message Aut Lit on.

IT doesnt stay on always but it will come on as soon as you hit an active freq.

To reverse the process(mostly to save battery life) do the same thing you will get the message Aut Lit off.

>Hi, It is possible to have sidebands on FM transmissions? I have a good
>grasp on AM sideband theory but FM seems to be hard to find info on, if it
>is even possible there is such a thing!

Close, but not quite. They're called subcarriers. An "easy" way to listen to them is to run a line from (I believe) the I.F. output of your receiver. Then you need a receiver capable of covering 50 to 100 kHz (kiloHertz) which is where most of the subcarriers are located. They broadcast things like stock reports, reading for the blind, music, and such. Ramsey Electronics has an FM receiver and an SCA receiver which should do the trick. As far as I know, only FM broadcasters have subcarrier broadcasts. The Ramsey method is probably easier than hacking your radio and finding a receiver that goes down to 50 kHz. It'll run you in the neighborhood of $100 to $125 to get both units, cases and power supplies. And, as we all know, it is "illegal" to listen to subcarrier broadcasts unless you obtain permission from the broadcaster. As I am a broadcaster in Kansas City as well as being a sovereign, thinking citizen of this Republic, I hereby grant you Permission in Perpetuity to Listen to Radio in the Privacy of Your Home.

>Close, but not quite. They're called subcarriers.

No. Not the same.

'The sidebands generated by FM and PM occur at integral multiples of the modulating frequency on either side of the carrier. This is in contrast to AM, where a modulating frequency will produce a single set of sidebands on either side of the carrier frequency.' - 1999 Radio Amateur's Handbook

Look for a Bessel function chart of modulation index. It will show the amplitude of the carrier and various sidebands referenced to an unmodulated carrier, for different values of modulation index (the ratio between the frequency deviation, in Hz, and the modulating frequency, also in Hz). You can see quite clearly that under certian conditions, the carrier amplitude is zero. Quite neat.

A subcarrier is a modulated carrier that is modulated onto another carrier. The simplest example would be television sound, which is FM modulated on a 4.5 MHz carrier frequency (or was it 4.8?). This modulated carrier is then added into the baseband video signal, and the result is used to modulate that big transmitter on the hill.

I'm guessing here, so take this with a grain of salt... If I remember correctly, the 220 MHz band is not available to amateurs in all countries. Perhaps the scanner would not be allowed in some areas if it received this band.

But, Gerry, it does receive 220. What it doesn't do is have the 220 band in the Ham service search. Very interesting observation. Maybe someone in Japan forgot to program that into the chip when the scanners were built, since they don't have the 1-and-a-quarter meter band there?

Just guessing....

1107. Charge rate on buit-in charger

Yahoo group: pro94owners
Date: 2001-06-15 21:17:09 UTC
From: Mark
Topic: 1107 Message: 1107

Does anyone know the charge rate for the built-in charger?
It says in the manual it will charge dead batteries in 10-18 hours
but that's kind of vague for me.

My guess would be 50 mA, give or take a bit. It wouldn't be hard to
measure.

> longer run time.

My understanding is that the memory effect was fist observed in
spacecraft battery management systems, where the batteries were
repeatedly discharged to exactly the same point before recharge. In
normal earthbound use, this rarely happens. Here is a little snippet
from http://pacnet.ne.mediaone.net/wb4hfn/resources/nicadfct.txt :

MEMORY
EFFECT: ALTHOUGH MORE COMMON IN THE POWER PLATE BATTERIES OF
YESTERYEAR, THIS CAN STILL OCCUR IF THE PROPER CARE ISN'T
GIVEN. WHEN A REPEATED SHALLOW DISCHARGE OF THE SAME
AMOUNT OCCURS MORE THEN 200 TIMES, A BATTERY CAN SHOW A
MEMORY EFFECT. THIS RARELY OCCURS WITH NORMAL USE. EVEN
IF IT WERE TO OCCUR, THE BATTERY WILL SEEM TO HAVE A
REDUCED CAPACITY OF ONLY ABOUT 10% WHICH IS NOT NOTICEABLE.
THIS MEANS YOU'LL STILL HAVE ACCESS TO 90% OF ITS ORGINAL
CAPACITY.

In other words, run your radio for exactly the same amount of time
every day, for 7 months, with the volume turned all the way down so as
not to vary the amount of discharge, and you might see the memory
effect.

I was assigned to an Aircraft Carrier while I was in the Navy. For two years I was the Medic for the ship's fire department. I had Motorola Saber radio that was issued for my use only. When it was issued I was given two new battery packs for it. The Medical department also got new battery packs around the same time. I made sure that my batteries were cycled so that the would not get memory. The departmental radios were used by 50 other people and never had the batteries taken care of. Whenever a battery went dead or if the radio was not needed it was just put on a charger. I never had a problem with my batteries in two years. The departmental radios never lasted more than a few hours after the first year.

Also in the PRO-94 owners manual it recommends totally discharging the batteries once a month.

So what gives?

The full text at
http://pacnet.ne.mediaone.net/wb4hfn/resources/nicadfct.txt is included
below. Your questions are addressed in #1, #3, and #8. It also states
that memory rarely happens in normal use. I've come to understand that
NiCd batteries require strict charge management for longest life (1000
cycles or more), and most real-life applications use pretty sloppy
charge management. Also worthy of note is the fact that space-rated
battery packs are made from cells culled from lots of hundreds of cells
in order to be very closely matched to each other. This, along with
strict charge management, results in useful lifetimes of ten years or
more in some cases. I used to think that NiCds sucked; not I know that
charge management in consumer applications is what sucks. What most
people think of as 'memory' is really an abused battery at the end of
it's life. Spend an evening surfing the battery manufacturer's web
sites, and other rechargable battery info resources (including
amsat.org archives and NASA). It is an education.

SUBJECT:<<<<<<<<-WHAT YOU SHOULD KNOW ABOUT NICAD BATTERY
PACKS->>>>>>>>

CAPACITY: EXPRESSED IN TERMS OF AMPERE HOURS (AH) OR MILLIAMPERE
HOURS (MHA). THIS IS A MEASURE OF THE DISCHARGE RATE
NEEDED FOR THE BATTERY TO DROP ONE VOLT PER CELL WITHIN ONE
HOUR. FOR EXAMPLE A FULLY CHARGED 4 AH BATTERY USED WITH A
HT NEEDING 2 AH CURRENT WILL DISCHARGE IN APPROXIMATELY 2
HOURS. WHEN A BATTERY PACK'S CAPACITY DROPS TO 80% OF ITS

RATED CAPACITY, IT SHOULD BE REPLACED.

VOLTAGE: WHEN IN USE, THE VOLTAGE OF THE NICAD BATTERY PACK IS ABOUT 1.2 VOLTS PER CELL. THIS VOLTAGE REMAINS UNTIL THE CELL APPROACHES DISCHARGE. IN NORMAL OPERATION, THE VOLTAGE SHOULD NOT DROP BELOW 1.1 OR 1.O PER CELL. NOTE: IF THE BATTERY PACK IS USED TO PROVIDE CURRENT ABOVE THE RATED VALUE THERE WILL BE A SEVERE DROP IN VOLTAGE WHEN DISCHARGE IS APPROCHED. THIS REDUCES THE CAPACITY AND CAN RENDER THE BATTERY PACK USELESS.

CYCLES: USED TO MEASURE THE LIFE OF A BATTERY PACK, A CYCLE IS A FULL CHARGE AND SUBSEQUENT DISCHARGE. NICAD BATTERY PACKS SHOULD LAST 1000 OR MORE CYCLES (TWO TO THREE YEARS OF USE ASSUMING EIGHT HOURS DAYS, FIVE DAYS A WEEK) UNDER NORMAL CONDITIONS.

POLARITY
REVERSAL: THIS OCCURS WHEN ONE OF THE CELLS REACHES ZERO VOLTAGE BEFORE THE OTHERS. BECAUSE ALL CELLS ARE CONNECTED IN SERIES, A REVERSAL IN POLARITY OCCURS. ALTHOUGH THIS SITUATION CAN BE REVERSED, IT SHOULD BE AVOIDED SINCE, IF DONE REPEATEDLY, IT WILL SHORTEN THE LIFE OF THE BATTERY PACK.

MEMORY
EFFECT: ALTHOUGH MORE COMMON IN THE POWER PLATE BATTERIES OF YESTERYEAR, THIS CAN STILL OCCUR IF THE PROPER CARE ISN'T GIVEN. WHEN A REPEATED SHALLOW DISCHARGE OF THE SAME AMOUNT OCCURS MORE THEN 200 TIMES, A BATTERY CAN SHOW A MEMORY EFFECT. THIS RARELY OCCURS WITH NORMAL USE. EVEN IF IT WERE TO OCCUR, THE BATTERY WILL SEEM TO HAVE A REDUCED CAPACITY OF ONLY ABOUT 10% WHICH IS NOT NOTICEABLE. THIS MEANS YOU'LL STILL HAVE ACCESS TO 90% OF ITS ORGINAL CAPACITY.

>>>>>>>>FACTS<<<<<<<

1. BE SURE TO USE THE CHARGER THAT WAS DESIGNED FOR THE TYPE AND CAPACITY OF THE BATTERY PACK TO BE CHARGED. CONTINUOUS OVERCHARGING MAY SHORTEN BATTERY LIFE.
2. ALWAYS USE A CHARGER THAT SWITCHES TO A TRICKLE CHARGE AFTER THE BATTERY REACHES 60 TO 80% OF FULL CHARGE. THIS AVOIDS BATTERY DAMAGE CAUSED BY CHARGING A BATTERY AT GREATER THAN A 10 HOUR RATE FOR LONG PERIODS OF TIME.
3. UNDERCHARGING A BATTERY CAUSES THE MOST DAMAGE. THE CAUSES FOR THIS ARE USUALLY ONE OF TWO.
1. MISMANAGEMENT
2. DEFECTIVE CHARGER
4. DO NOT FAST CHARGE BATTERIES THAT HAVE BEEN STORED FOR MORE THEN 6-MONTHS. START THEM OFF ON A SLOW CHARGE OVER A 14 TO 20 HOUR PERIOD. AFTER THE FIRST CHARGE (SLOW CHARGE) A FAST CHARGE CAN BE

USED FOR SUBSEQUENT CHARGES.
5. NEVER FAST CHARGE BATTERIES BELOW 40 DEG F. CHEMICALS REACT
SLOWER BELOW THIS TEMPERATURE. THIS MEANS A BATTERY PACK CAN'T
ACCEPT HIGH CURRENT. IF A HIGH CURRENT WERE USED TO CHARGE THE
BATTERY UNDER THESE CONDITIONS, PRESSURE WILL BUILD UP IN THE
CELLS AND THERE WILL BE A LOSS OF CAPACITY.
6. CHECK NEW BATTERY PACKS AS THEY ARRIVE TO BE SURE THE CAPACITY IS
STILL AT THE LEVEL NEEDED FOR YOUR EQUIPMENT.
7. CHECK THE CAPACITY OF NICAD BATTERY PACKS EVERY THREE MONTHS WHEN
USED EVERY DAY. CHECK EVERY SIX MONTHS WHEN USED LESS OFTEN. IF
THE BATTERY IS LESS THEN 80% OF ITS RATED CAPACITY, THEN THE
BATTERY IS NEAR THE END OF ITS LIFE AND SHOULD BE DISPOSED.
8. AVOID DEEP DISCHARGES. IF A BATTERY SHOULD BE DISCHARGED BELOW
ONE VOLT PER CELL, POLARITY REVERSAL MAY OCCUR AND THE BATTERY
WOULD BE RENDERED USELESS.
9. AVOID SHORT CIRCUIT BATTERY PACK, THIS CAN BE DONE CARRYING THEM
IN YOUR POCKET WITH COINS OR KEYS. IF A PACK SHORT CIRCUITS
YOU'LL PROBABLY BURN YOUR FINGERS OR SOMETHING ELSE, ALL
ACCORDING TO WHICH POCKET IT IS IN.
10. RESIST THE TEMPTATION TO BUY EXTRA BATTERY PACKS ON SALE, THEN LET
HEM SET IDLE FOR LONG PERIODS OF TIME. BATTERY PACKS THAT HAVE
SIT IDLE FOR A LONG PERIOD OF TIME MAY TAKE AS MANY AS TEN CYCLES
TO BRING THE BATTERY PACK BACK TO CAPACITY.
11. WHEN STORING BATTERIES BE SURE TO STORE THEM IN A COOL PLACE.
STORING BATTERIES IN HIGH TEMP. CAUSES THE BATTERY TO SELF
DISCHARGE, SPEEDING NATURAL DETERIORATION AND REDUCING CAPACITY.

Memory problem or not, why use regular ni-cads? The nickel-metal hydrite batteries last longer, have no memory problems and the Pro-94 can use them. Simple solution, rather than going through all sorts of hoops and over barrels keeping the ni-cads up to snuff.

I have one if your interested, in the box with all manuals and papers.
Just email me back. I really don't have the time now to use it.
I just pick it up sometimes, but I don't have time to use it
properly.

NiMH batteries are not a direct replacement for NiCd, despite what they
tell you. They have slightly different charge management requirements,
as I have explained before in this forum. Close enough to work OK for
most people, but not optimum. You are not correcting a problem, just
supplying a different victim. Again, read the battery manufacturer's
tech docs.

And, once again, memory is simply not a problem for the typical
consumer user. What most people mistake for memory is actually
premature cell death due to sloppy charge management.

From: wess@...
Subject: Looking for Used Pro94

Can anyone advise the best place to source a used pro94?

Thanks,
Wess

I found mine on Ebay in like new condition with accessories for $125.00. It took me a couple of weeks to find it, but it was worth the wait.

Thanks,

Frank

Because, they last (overall) twice as long and cost about 30% less. The
Ni-Hi's are also easier to overcharge and ruin.
I've got an arsenal of 30 Ni-cads for all my radios. If I had to replace
them with Ni-Hi's that would be about $150.00 verses $100.00 in twice the time.

1125. NI-MH Batteries

Yahoo group: pro94owners
Date: 2001-06-29 14:00:27 UTC
From: fgallow333@aol.com
Topic: 1125 Message: 1125

If you guys will check Ebay, I bought 8 of the nickel-metal hydrite batteries for my scanner and digital camera for about $2.00 each. That was a few months back and I cannot be more pleased with them. I have purchased several size NiMH batteries and have not had a single problem. Just go to Ebay and under search type in "AA Batteries" and you will be surprised with the number of batteries being sold.

Sometimes I feel like I am talking to myself. How much simpler do I need to explain it? Memory is a non-issue for most common consumer applications, according to technical documentation.

Once more:

MEMORY
EFFECT: ALTHOUGH MORE COMMON IN THE POWER PLATE BATTERIES OF YESTERYEAR, THIS CAN STILL OCCUR IF THE PROPER CARE ISN'T GIVEN. WHEN A REPEATED SHALLOW DISCHARGE OF THE SAME AMOUNT OCCURS MORE THEN 200 TIMES, A BATTERY CAN SHOW A MEMORY EFFECT. THIS RARELY OCCURS WITH NORMAL USE. EVEN IF IT WERE TO OCCUR, THE BATTERY WILL SEEM TO HAVE A REDUCED CAPACITY OF ONLY ABOUT 10% WHICH IS NOT NOTICEABLE. THIS MEANS YOU'LL STILL HAVE ACCESS TO 90% OF ITS ORGINAL CAPACITY.

I'm new to the pro94 but i'm stump on one thing. when scanning freq in a non trunked mode the only way to hold that channel for me to listen is to press man. I must have done something wrong to program those channels, also it seems i cant use the arrow buttons to go back and forth to listen to a certain channel but i must scan until that channel is active. I have the instructions book but i must be reading it wrong, anyone who can help please, thanks.

D.Bennett

1128. Re: [pro94owners] pro94-scan mode non-trunked

Yahoo group: pro94owners
Date: 2001-06-30 11:51:04 UTC
From: Gerry Wheeler
Topic: 1127 Message: 1128

The trunking capabilities of the Pro-94 seems to get the most attention, but it is also a fine scanner in non-trunked mode.

Yes, in conventional mode, the only way to keep it on one channel is with the Manual key. That's not unusual -- other scanners I've had do the same thing. I wish the Pro-94 would use the Hold key in conventional mode too, but it seems to get ignored.

Don't forget you can also program a delay for each channel, but that's not a permanent hold. (Unlike trunked mode, the delay in conventional mode is programmed for each channel separately.)

The arrow keys do not let you manually walk through the programmed channels, and this is also like other conventional scanners. The only way to do that is to repeatedly press the manual key. It advances through the channels each time you press it. If I remember correctly, pressing the arrow keys while in manual mode will put the scanner into search mode, where it starts searching for an active frequency starting at the current frequency.

If you want to go to a specific channel to wait for activity, you can press Manual, then key in the channel number, then Manual again. For example, pressing Manual, 1, 2, 3, Manual will set the scanner to channel 123 and stay there.

Yahoo group: pro94owners
Date: 2001-07-01 14:56:21 UTC
From: darren_havens@hotmail.com
Topic: 1132 Message: 1132

Anyone have any Ideas or comments on a way to place my Pro-94 somewhere in front of me while driving? I can't see it on the sunvisor and the only other place I have is to low to see the display also. I have seen mounts that somehow mount on the AC vents and hold you handhelds there. Any Ideas where to find these. Or is there other ways to do what I want. I don't knwo if this would help, but I drive a full size Dodge Ram Pickup. Thanks for any help.

Well with a truck like that you should be able find room to come up with some McGiver contraption but what i did was i put velcro on the back of my 94 and a strip on my dash board and it works fine. I drive a full size CHEVY and my 94 sits some what next to my stearimg wheel and sits at eye level with my display. I've seen the one's that hook up to the AC vents for cell phones and maybe with a little configuration one of those can be used for the 94.

I just stick mine on the seat and use an extension mike clipped to the seatbelt. One of these days I am going to install an attenna on the trunk of my car. You may want to check out one of those old cell phone holders that is spring loaded. You can bolt it to just about anything. They even make them long enough to mount on the floorboard.

Yea, put it somewhere that you can't see the display so you can concentrate on your driving.

1139. RE: [pro94owners] Re: handheld mobile mount

Yahoo group: pro94owners
Date: 2001-07-02 01:27:11 UTC
From: John R. Fleming III
Topic: 1132 Message: 1139

Ha, actually the mount is sold as a cell phone holder, and it is a spring-style deal. The red button is the release to loosen the unit, while you just squeeze the two black pieces on the sides of the mount to tighten it. I have found it to be REALLY secure, and the pole it sits on is a thick, but flexible piece.

The keychain... hey man, I'm in college.

Thats what i need, thats perfect. What is the red button for, and every man should have a bottle opener on their key chain.

Hi all,

Go to Pep Boys Auto parts If you have one in your area. $19.99 can get you a cellphone holder (choice of 2 kinds - one to fit in a cupholder w/ a 7 in. arm or velcro mount anywhre on your dash.

Good luck & HAPPY 4TH of JULY ALL!

HAPPY PRO-94 SCANNING!

Take care and be safe,
Sherman

I think ColaMan needs to cut back on the caffeine.

Anyway, you can leave out a trunked system fairly easily. Press the Trunk key to exit from trunking mode. Press the Trunk key again to enter trunking mode. You'll see on the display the banks where you have trunking information stored. Below some or all of them is a little marker. If you turn off the marker for the trunking bank you don't want, that system will not be used. To turn the marker on or off, just press the number of the bank on the keypad. Then press the Srch key to start trunking.

For example, in my area there is one trunking system for the county agencies, but they have remote areas served by their own mini-systems. I have those systems programmed, but I don't usually activate them. When I start trunking mode, the marker under bank 1 is on, but the others are off. If I am out in the remoter areas, I exit trunking, re-enter trunking, turn on one of the markers, and press Srch.

OK?

Does anyone know what changed in the Escondido, CA Trunk system. Even in search mode I no longer receive anything. The data channel appears to be the same and I can still hear some info on one of the frequencies. Have they changed frequencies, type system or what?

Escondido joined the County Radio System, and their PD is now digital.

The fire channels are analog.

Contact me if you need freqs and talkgroups.

This has been happening in several other groups on Yahoo that I belong to
so it is not your fault. Some of the other list-owners have had to track
down the bozo who is doing this on purpose (?) and ban the sucker which
they have had to do twice so far since the turkey changed addresses.
Take care.

1154. CELLULAR INTERFERENCE

Yahoo group: pro94owners
Date: 2001-07-14 15:00:30 UTC
From: elliston@ix.netcom.com
Topic: 1154 Message: 1154

I'm using one of the older PRO94s. (Not a 94A) The ever increasing number of cell towers is making it harder to use the radio in the 800 mHz trunking mode. Believe me, I know the "sound" of cellular interference, and that is definitely where the problem is coming from. Is this a problem they solved with the PRO94A? Have any of you guys made a comparison? Would buying the "now-on-sale" PRO92 solve the problem? Is there perhaps an in-line filter available that might solve this problem?

I live in a big city and own an older 94 too. All my radios do the
same thing when I bring them in the car, especially on VHF, depending on where
you are in the city.
There are inline filters for the antenna to filter out bands you're
not listening to but are not real practical with a handheld. To filter the band
you are listening to my suggestion would be to get some sort of attenuation
(which the 94 itself won't do) for the radio, such as lowering the antenna but
that might not work (if you can't here what you want really want to hear).
You would think by now they would have a filter that filters out
just the cell portion of the 800 band but I'm not sure about that.
I would try this same question at rec.radio.scanner and
alt.radio.scanner (if you haven't already) to see what comes up.

--- In pro94owners@y..., lmnorotsky@c... wrote:
> How can you tell that it is cellular?

Good Question!
In the early days of 800 mHz scanning, we depended upon such classics as the Uniden Bearcat 200XLT. Back then, we looked forward to the introduction of a trunking scanner, the same as we watch for the introduction of a digital handheld today.
Although it was not then required by law, those old early 800 mHz scanners were cell blocked. If you wanted to bother with it, you could purchase a modification that eliminated the cell block, or the bold could do it by himself by clipping a couple of resistors. Quite frankly, I never had any interest in monitoring cellular, even though it was arguably legal back then.
Virtually every frequency on those old scanners had a "reflection" exactly 21.4 mHz above the actual frequency. If you did any searching in the range of about 895 to 916 mHz, you were bound to hear some cellular, even though this was not really the cellular frequency range. Thus, we old timers, even those of us who did not monitor celllar, know the "sound" of cellular.
Incidentally, the stuff I've mentioned above won't work to monitor cellular today. First of all, it's illegal. Secondly, most cell phones are now digital. Thirdly, even if someone did happen upon an analog conversation, he would hear only half of the conversation.

Let me see if I get this right.

I do have a BC 200XLT. NAS Corpus Christi PD works on 136.600. If I were to punch in 157.000 I would get all the traffic from 136.600? When I pick up both sides of a phone conversation on the scanner it is only a reflection or a cordless phone. I also pick up some TV audio in the 900-905 range on the BC but not the Pro-94.

Topic: 1154 Message: 1159

Your 136.6 mHz signal is close enough to the 118-136 aircraft band
that it may be an AM signal, rather than FM. At 157 mHz, the BC200XLT
will be receiving in the FM mode. Otherwise, this should work.
I don't really know why some cellular conversations came through
one-sided, while others were two-sided. They outlawed listening
before I found the correct answer, but here's my hunch. If you think
about it, a cell tower is just a fancy repeater. In a conversation
between a land line phone and a cell phone, there's no need to
"repeat" the half of the conversation that comes from the cell phone,
since there is no other intended mobile recipient of the conversation.
Following this logic, that rare two-sided conversations is probably
between two cell phones, with both operating off the same cell site.
Let's bring this back to some relevance to the PRO94, before we annoy
some folks with this digression. In the 800 mHz band, I'm only
getting cellular interference with nearby frequencies. As far a I
know, I haven't actually heard a cellular conversation in that band.
When they cell blocked the PRO94, apparently they did not look at the
nearly forgotten 30-50 mHz band. Our local highway patrol mobiles
use 42.26 mHz, and unwanted cell conversations are a real annoyance
near the cell towers! Raises an interesting legal question. If
you're monitoring a lawful frequency, and a cell conversation suddenly
barges in, are you legally obigated to turn your radio off? I don't
know the answer to that one!

1160. More on the NiCd memory myth

Yahoo group: pro94owners

-----BEGIN PGP SIGNED MESSAGE-----

http://www.powerstream.com/BatteryFAQ.html

A highly technical page:

'Memory in NiCad cells is largely an urban myth. What passes for "memory" is usually consistant overcharging, which can cause cadmium hydroxide to passivate the electrode, or just wearing out the battery through use. In the former case sometimes a deep discharge will help, but it is likely that the combination of overcharge, then deep discharge, will shorten the lifetime of the battery. The true "memory" effect comes from experience with a certain style of NiCad in space use, which were cycled within a few percent of discharge each time.'

1161. NiMH charging

Yahoo group: pro94owners
Date: 2001-07-18 04:28:24 UTC
From: Jim Shorney
Topic: 1161 Message: 1161

-----BEGIN PGP SIGNED MESSAGE-----

http://thomas-distributing.com/nimhbattery-faq2.htm

Newer Nimh battery chargers are designed to specifically charge NiMH and NiCD chemistries. However most of the older NiCD chargers were not designed to charge any other battery chemistries such as NiMH since they were unavailable at that time these chargers were designed. That is why many of the newer NiMH/NiCD chargers are capable of automatically charging both types, while others have a switch. There is more than just mA ratings involved when charging different battery chemistries rate of charge, length of charge, type of charge. etc...) While it is true that some NiCD chargers can be used to charge NiMH batteries you must consider the following points if you decide to attempt to charge your NiMH batteries using an older NiCD charger.

1. Improper charging or using a charger that is not specifically designed to charge any rechargeable battery can cause their useful life to be shortened dramatically or in some cases actually damage them permanently. We have even had some individuals attempt to charge rechargeable alkaline batteries in some of our chargers and were surprised when they exploded.

2. Although a NiCD charger may seem to be charging NiMH batteries fine, this is not usually the case. NiMH chargers are specifically designed to prevent Hydrogen bubbles from forming on the battery plates and of course to charge them to their full potential. Basically you should always use the type of charger recommended for your type of batteries.

And this contributes to the discussion at hand exactly how?

This is the kind of response I can expect here for trying to be
helpful...? I apologise to the group for trying to do a public
service.

I don't believe there is any restriction on reproducing portions of
Copyright materials in a public forum as part of a technical
discussion, as long as the content is not altered (it wasn't) and the
original source/author is credited (it was). I see no restrictions on
the referred web site prohibiting reproduction. You are welcome to
have their attorneys contact me to discuss it.

In the meantime, I suggest that you, sir, would be wise to read the
RFCs and Netiquette guidlines regarding excessive/unnecessary quoting
of message content in a reply. You repeated the very faux-pas you
accuse me of within another _real_ faux-pas. FWIW, I've been hanging
around the net for close to 15 years, and you? Don't bother
responding, you have been added to my killfile.

(Drifting back on topic) For those out there that want real information
about batteries, I recommend the book "Batteries in a Portable World",
by Isidor Buchmann of Cadex Electronics, Inc. It is available for
online reading (free) at http://www.buchmann.ca/ - it is very thorough
and informative, and written in layman's terms.

1165. PRO94 / PRO91 Comparison

Yahoo group: pro94owners
Date: 2001-07-22 16:02:49 UTC
From: elliston@ix.netcom.com
Topic: 1165 Message: 1165

Yesterday, before leaving for a nearby metropolitan area, I accidentally grabbed my old Pro91, instead of my Pro94. This is an easy mistake, because in appearance the two are almost twins. The Pro 94 is an earlier model, not a Pro94A. I immediately noticed better receiver performance, such a stronger signals and audio clarity. The Cellular interference (See message 1154) was gone. I'm now curious as to whether my PRO94 has a defective receiver, or is the Pro91 simply a better receiver. Has anyone else made the same comparison? As far as programming features and trunk tracking are concerned, the Pro94 performs like a jewel and obviously has the Pro91 beat.

From: Jay M
Topic: 1169 Message: 1170

I think the A version has a date code ending in 00.

I bought mine 6 months ago at the last sale and its got 08A99 on it too.

I went back after learning about the A version to see if I could swap but no luck. Neither of the two stores I checked had them nor did the employees know about a different version.

1171. Date code

Yahoo group: pro94owners
Date: 2001-08-01 20:23:35 UTC
From: brm@pulmonox.com
Topic: 1171 Message: 1171

The Pro-94 I just purchased has a date code of 10A00. I read somewhere that if you look at the CAT NO on the decal located on the back in the top right corner it will read 20-524 or 20-524A. The second with the A is the lastest version.

Hope this helps.
Bruce

This has been a point of debate for several months actually. Some say Yes, Some say No. To my knowledge, nobody has been able to get a straight answer.

> 2. what is the difference?

The 94A will scan Trunked and Conventional Frequencies at the same time whereas the 94 will only scan one or the other.

> 3. how does the pro-92 compare?

Depends on your preferences IMHO. I have programmed both a 94 (My own) and a 92, and actually found the 92 to be somewhat easier to program, plus (I think) you can program the 92 with computer software.

From: tobrien@thermastor.com
Topic: 1174 Message: 1175

The pro 94 does not support LTR trunking. The pro 92 and BC 780 will follow a LTR system. They will not follow a multinet ef johnson system though. There may be a pc software program (+ modified scanner?)that allows this, but I am not sure. You should first determine the type of system you are trying to monitor, then you could try the newsgroups to find which model/brand of scanner will work.

1176. Talk Group ID's

Yahoo group: pro94owners
Date: 2001-08-05 13:49:46 UTC
From: Wayne Beckham
Topic: 396 Message: 1176

This is probably in an FAQ somewhere, but I've searched the archives and wasn't able to locate it. I'm a newbie - so be gentle! :-)

I just bought my Pro-94 just for the trunk tracking used in San Bernardino County. What I can't figure out is talk group ID's. I think I understand the basic idea: they identify particular agencies. So, theoretically, I should be able to track just a particular agency and not have to put up every in the trunk.

So how do you do it? The freq lists I can find shows a group ID that should look like "16528" - what I see on my pro-94 is 200-2.

Any recommendations?

- Wayne

1177. Re: [pro94owners] Talk Group ID's

Yahoo group: pro94owners

From: Glen Tubbesing
Topic: 396 Message: 1177

Wayne...

First things first. If you are expecting to see a five-digit talkgroup ID, and you got 3 numbers, a dash, and another number, that means that your scanner is setup for a Motorola type 1 system and it needs to be a type 2 system. Information on how to change that is on page 44 of the manual. Basically, here's how to do that.

1 - Make sure the radio is not in trunked mode. If the word "TRUNK" appears in the top left corner of your display, just press the TRUNK button again to turn it off. If TRUNK is not in the display, go on to the next step.

2 - Press PROG then TRUNK. TRUNK will appear and one of more of the bank numbers will flash. These are your trunked banks.

3 - Press the number key corresponding to the trunked bank in question. For instance, if the system with the problem is in bank 2, press the number 2 key on your scanner keyboard.

4 - Change the trunk system type by pressing the up or down arrow keys on the bottom left side of the keyboard until the right trunking system type shows up on the display. In your case, it probably says "E1," but you want to see "E2-800." When you've selected the right system type, press the "E (SVC)" key in the bottom right corner of the keypad.

5 - Since it appears you've already got the frequencies programmed in, all you have to do is press the SRC button to begin searching for the data channel.

Information on storing Talk Group IDs in ID Lists starts on page 53 of the manual. You can also temporarily store a Talk Group ID in the Monitor ID Memory. If you are trunking in the search mode, just press the MON/CLR(·) to store the ID, then press the SRC button again to resume searching. Instructions on how to move that Monitor ID into the Talk Group ID List is on page 54 of the manual.

Good Luck,

Glen Tubbesing

Topic: 1183 Message: 1185

Just for the hell of it, the other day at RS I asked to see the date codes on the 92's and 94's. They had the 92B's and still the plain old 94's. So, you may have to look around.

John,

You can not upgrade the 94 to the 94A. I have talked to many who
have tried. I have the 94 ands the 94A, because you can't upgrade it.

George,

On the box, where the model number is, there will be a box after the model number with an A in it. The A is on the unit as well, after the model number.

Happy scanning

From: amama6x@aol.com
Topic: 1194 Message: 1194

Well, I know I sure can, after all, it's ME!!!
Just wanted to share my stupidity of today. I went to lye down before the kids start tearing through the house, decided that the auto light was really draining my batteries, so I turned it off. After doing so, I find that I am no longer trunking and hearing all the garbble that is normal while in the non trunking mode. I get up, start searching the archives, find nothing...after panicking that I can't find my channel list, not to mention my scan id list. I look at the scanner one more time, pushing buttons, taking batteries in and out, plugging it into the wall, you name it I did it! Finally, decide to call radio shack, and as soon as I tell him, he asked about the key lock...there it was a bold as anything, k/l, I apologized for my pathetic dumbness and being blond. Just a little clue...remember to check that darn keylock button before freaking out! lol Hope y'all got a laugh out of this...cuz someone needs to!

Thanks for listening!
Jen

1196. New Owner - Please Help!!!

Yahoo group: pro94owners
Date: 2001-08-25 19:33:17 UTC
From: Tyler
Topic: 1196 Message: 1196

OK, I took the plunge and bought a Pro-94 yesterday. I am in need of some help in programming the beast!

I have loaded a list of 800MHz frequencies and have identified the local trunking system as a Motorola type II. I can even get it to search for active trunking groups within those frequencies.

Where I am stuck is...

How do I PROGRAM known trunk groups into the frequency bank? I have a list of trunk groups (do I use hex or decimal?) but can't figure out how to enter them.

Any assistance would be appreciated!

1199. New to list

Yahoo group: pro94owners
Date: 2001-08-18 06:59:13 UTC
From: David Marshall
Topic: 1199 Message: 1199

I have skimmed over the archive for this group, and didn't find anyone talking about Digital scanning. My manual, yes I read it, says my Pro-94 cannot receive digital.

Scenario:

I live in Colorado Springs, Colorado, and the town here, along with El Paso County, went to this new system. I was told that this system was the Motorola II one, and in fact the freq's were listed in the manual that came with my scanner. However, I cannot get the trunk here to work. I will read my manual 8 more times (I have already read it 2 times!) and try to ask a more informed question, but HELP!

I downloaded the purportedly newer freqs from trunkscanners.com that contained more freqs than in the book, but every time I turn on my radio, I get the scanner searching through the trunk for all of the data channels and no voice comes through.

Ideas?

Thanks for all your help, in advance, Dave Marshall AB0JY

Could it be that you need to find the scan id's and put them in? I would explain it, but forgot how to do it. God help me if I ever have to redo them. Maybe someone can offer some more help on this. I know it's horrible to be new at something and trying to learn the best you can, but sometimes, those stupid manuels aren't written for the average Joe or Joan...lol
Good luck! :-)

I have edacs and motor type I in my 94 I live in Miami and was lucky enough to find valid freqs andID`s on the internet. Are you sure you are in the trunk mode when you enter the freqs and search for the data ch. If you are, Iwonder about the freqs themselves. Don`t give up !!! I said the hell with it three times and threw it in the kitchen drawer. But I kept getting it out until I got lucky. If you can find the data ch. its down hill from there. I`m sure you will get past the data ch.. In the meantime be looking for those ID,s. Its much easier to put them in than to search for them. There out there.

From: martym
Topic: 1203 Message: 1203

Today on eBay auctions I put in the winning bid on a used RS Pro-94 for $135.28 The owner states it is in "excellent" condition and includes the original box, manual, belt clip, battery, AC adaptor,external speaker and 2 police call frequency books.

I will be using it on the local Motorola Type II system. Now that I have got "bit" by the trunking bug, what would be the best Base Trunking scanner to get? Thanks.

For the money, you're best bet would be the RS Pro 2067. The only other
ones to consider would be the 2052 (ok) or the new 2053 (not impressed).

> A and B. Does anyone know if there is a difference betw. them.

200-0524 is the Pro-94. It will scan either Trunked systems or
Conventional, but only one at a time

200-0524A is the Pro-94A, it will scan Trunked and Conventional at the same
time

Not sure about the Pro-92, sorry

Ed

1208. Pro 94 A version

Yahoo group: pro94owners
Date: 2001-08-29 11:08:51 UTC
From: rablaw@worldnet.att.net
Topic: 1208 Message: 1208

Ah, I found the answer in old posts- I would definitely get the A version of the Pro 94, if I get a 94.

However, does anyone know the difference between the Pro 92 A and B versions?

Thanks,
Fred

1210. Pro-94 vs BC245XLT

Yahoo group: pro94owners
Date: 2001-08-29 22:09:49 UTC
From: Tony Casciato
Topic: 1210 Message: 1210

Has anyone done a comparison (or seen a comparison) between the Pro-94 and the BC245XLT? They seem to be pretty close to each other but reading specs doesn't tell everything. Tony...

Don`t worry about the box. Sometimes when units are returned or exchanged some boxes may be missing or damaged. Then the switching begins. I know. There isn`t an A on the box. On the back of the radio, in The upper right hand corner there is a serial No. like 20-524A the A will be in a box. The same No. will also be on the back of the manual in the lower right hand corner. Make sure they match.

GIB

Topic: 1212 Message: 1212

I have seen some comparisons. Their constant hack against the 94 is "a 1000 chs who can fill a 1000 chs anyway?". They just don`t get it. Its not about chs, it`s about BANKS. The 94 gives me two radios in one hand. Bank group A gives me 5 banks of Miami Metro Police, bank 6, Metro Fire Rescue, 7 Coast Guard, 8-9 MIA, 10 our other 3 airports. Bank group B is Miami City Police 5 banks, bank 6 city fire rescue, 7 is 33-70cm-2 meter hams. And I still have plenty of space to search and play around with. No, aint nobody gettin my 94 away from me!

For the money, you're best bet would be the RS Pro 2067. The only
other
ones to consider would be the 2052 (ok) or the new 2053 (not impressed).

I have to agree, its a wonderful Scanner especially if you like to take it with you when you travel...Look Ma, I don't have to erase all my local frequencies! :)

Was fun to take it to KC, plug in their EDACS Trunk and listen in....was surprised at how "unprofessional" some of their PD can sound, but of course, I am comparing them to local listening which we know is anal retentative about procedure and protocol.

Talk about "unprofessional" police departments. I just moved to Daytona Beach, FL (an EDACS Trunk System) and these guys (and gals) are the most unprofessional group of people I've ever in my life heard on the radio.

But back to the topic. I have 2 PRO94 (pre version A days) and love both of them. I haven't had the BC245 but did once own a BC9000. The BC9000 was the largest piece of junk I've ever owned and will NEVER buy another BC scanner again because of that!

Most of my listening is MilAir (being in Florida we have lots of that!). The BC9000 picked up so many Cell Phone images in the Mil Air band it made listening to Mil Air worthless. I didn't think the sensitivity was nearlly as good as other Radio Shack scanners. Currenly I have the PRO2006, PRO2035, PRO26, PRO94 and PRO2052 all of which had far better sensitivity than the BC9000.

Thanks,
George

To put it more correctly, Uniden (among others) manufactures OEM
equipment for Tandy, to Tandy's specs. They purchase whole units,
boxed and ready for sale, not 'guts'. If you look on the nameplate you
will usually see something like 'Custom manufactured in (country name)
for Tandy Corp.'. This is a much more common practice in consumer
electronics than most people realize.

when i bought my 94, i talked with a guy who had all 3, the 92,94 and
245. he said that he'd keep the 94 hands down if he had to keep just
one. make sure you get the A version as (if i'm correct here) it
allows you to scan trunked and conventional at the same time whereas
the non-A does not. not sure if the 245 allows both or not. ANYWAY,
i bought the 94A and really like it. nice little radio.

Anybody in the San Diego/Riverside County area who would be willing to speak on the phone with me tommorow, Sunday in the AM? It is to detailed to mention here, but I tried the local trunking system (Camp Pendleton), and cannot trunk or hear anything. I followed the book exactly, scanner is set for a Motorola II, in conventional mode I hear every channel, and the data channel, but in trunk mode it just searches and searchs, occasionally one of the freqs pops up with no sound....If you think you can help, please leave me your phone number in my email and I will call Sunday in the AM.Thanks.

You need to set the 'base' and 'offset'.

For Pendleton, that's 406.000, and 25K.

Just follow the book for UHF trunked.

1231. Mod info

From: Scott Williams
Topic: 1231 Message: 1231

Hi all,
I have a Pro 94 (non A model) that has been modified to receive cell phones via "virtual downconversion". In other words, it receives cell phones in the 108 to 136 mhz (AM aircraft) range.
I bought this scanner used because it was a great deal, however, I'd like to remove the mod so that I can restore the am aircraft range.
Can anyone help me with this?
Thanks

From: jjl5217@yahoo.com
Topic: 1233 Message: 1233

Just purchased Pro-94A today. Programmed conventional, MotII, and EDACS freqs and it works great.

Question: Audio quality, is it supposed to be "trebley", i.e. hissy. I have other radios with much better audio. I'm sure my ears will get used to it in time; other than that, seems to be pretty good. Tommorrow will go mobile with it using "duck" antenna and roof mount whip.

Thanx
jjl5217 (KB2SFO)

Topic: 1233 Message: 1234

I am using my 94 in the car (probably like most of you)... and recently purchased a Cobra CB. I went to the local radioshack and was considering purchasing a decent magnet-type antenna and a few adapters so I could split the signal between the Cobra and the Pro94. Anyone try this at all? Any ideas on how this will perform? Will the two have issues on the same antenna as one-another?

Any input is appreciated.

Thanks,
John

Running two radios off the same antenna at the same time? You signal will be split between the two, so you will take at least a 3 dB signal strength hit. To perform well on CB, a CB antenna needs to be resonant at 27 MHz. That means it will perform poorly on the VHF/UHF frequencies your scanner will most likely be looking at. Last but not least, the first time you forget and transmit on the CB with the scanner connected, you will let the smoke out of the front end of your scanner. Bottom line, get a seperate antenna for the scanner. You will be much happier, and so will your radios.

Jim's right, you'll burn up your scanner the first time you transmit on the CB.

From: jjl5217@...
Subject: New Pro94A

Just purchased Pro-94A today. Programmed conventional, MotII, and EDACS freqs and it works great.

Question: Audio quality, is it supposed to be "trebley", i.e. hissy. I have other radios with much better audio. I'm sure my ears will get used to it in time; other than that, seems to be pretty good. Tommorrow will go mobile with it using "duck" antenna and roof mount whip.

Thanx
jjl5217 (KB2SFO)

jj15217,

Try the lapel speaker that Radio Shack sells. It greatly improves
the sound. I use mine in any noisy invironment or when I want to
listen. It isn,t expensive.

From: Tony Casciato
Topic: 1240 Message: 1240

I just got my Pro-94 from the Radio Shack internet site, on sale @ $199.99. There is no mention of whether it is the 20-524 or 20-524A model. I received the Pro-94A model. Sure enough the instruction manual verifies that I can scan trunked & conventional at the same time. The box does not show the "A" model, it just has 20-524 on it. The same on the front of the scanner, just 20-524. But on the back of the unit it has cat no 20-524 followed by an "A" in a square box. The back cover of the manual is marked the same way with an "A" in a square box after the catalog number. Tony...

1241. FT: Pro-94 for Pro-92a

From: Scott Williams
Topic: 1241 Message: 1241

I have a Pro-94 that I'd like to trade for a Pro-92a.
My Pro-94 is the original version which means it won't scan trunked and conventional systems at the same time, but it will scan up to 10 seperate trunked systems, both Motorola and Edacs at the same time.
It has had the virtual downconversion done so it receives cell in the 108 to 136 mhz range. Sorry no manual, but a PDF version can be downloaded from the Radio Shack web site.
The scanner is in very good shape and is in a leather case.
If interested, please email me at kc0ewq@...

John,
Here's my theory on the CB antenna, or any other external antenna. The BNC connector is spring loaded, and everytime we remove the rubber ducky to attach an external, we flex those springs. Eventually the springs will weaken, and so will your connection and signal quality. I learned this the hard way back in the 80's with my old Bearcat 100XL. It still works, but gosh what a blast of static if you happen to touch the rubber ducky while its receiving something!
The pro94 is a "handheld," and we all paid a little extra for that status. Why not keep it that way? The Shack has introduced a "high perfomance" handheld scanner antenna that looks exactly like the stock rubber ducky, except that its 24cm long. It costs about fifteen bucks. I bought one last week, and I immediately noticed greatly improved mobile reception on all bands. Although I've got an external mobile antenna, i really don't see much need for it any more. When I'm ready to get out of the car, it's a real convenience to be able to "grab it and go."

They sure do PREY on us for sure. Watch your freedoms disappear rapidly
from this point on, even moreso than in the past. The point is not that
they're praying, but that they're FALSELY praying. They don't really mean
it. Listen to what they're saying -- that we will have to give up some of
our liberties and freedoms to be safe. One of the Founding Fathers said
those who give up freedoms for safety will lose both of them. You're going
to lose it ALL.

>Hey guys,
Somebody out there is fixing to complain that this subject of patriotism has no relevance to a PRO94 forum. But it does! Here's how.
Let's put aside our modesty for a minute, and acknowledge that most of us are pretty good at programming these trunking scanners. Most of us know a few tricks that can reveal some fairly sensitive public safety communications, and we usually keep them to ourselves. Here's the question to ask ourselves: "If, by theft or misplacement, my scanner fell into the hands of a criminal (or terrorist), could my programming be misused in a manner that might endanger the public?"
Let's share our ideas on how to "lock" our scanners when they're not in use.

Don't go there. The same people that want our guns will then go for our scanners as well. What is next ten day waits, back ground checks? Why would anyone need more than 1 scanner, so lets limit them to only one new scanner a month? Have you heard about the guys going to the South where it is easier to get scanners and buying them in bulk? The then sell them in New York. Will we start calling the old used cheap scanners "Saturday Night Specials"? Will there be a ban on channel capacity?

Just food for thought.

misguided talk and what-ifs about revoking freedoms and accusations about ones intent when dealing with prayer is highly inappropriate and actually quite naive and combative....
go give some blood...go hug a child, go help an elderly person, Do whatever, I don't care.....you are either helping or hurting, comments such as this underscore someones intent and motive, while allowing one to appear to others as part of the problem, while offering no solutions.....

Only God knows if there prayers are true or false. It is not your call
it is your opinion. I hope you realize how lucky you are to be able to
express that opinion freely. We need to pull together as a nation not
fight with each other.

May God be with all of you,

Joe

We have not been FREE in America for along time. I have to put a CLUB on my steering wheel on my car when I park at work. I pay almost 5 months wages to the Government a year for my FREEDOM and don?t you think you own a Scanner because you are so FREE that you need to know what?s going on within the system?
But this is still AMERICA and WE are a GREAT Country and United we stand and Divided will fall. It is time to get off of our knees and show our strength by numbers!

>Hey guys,
Somebody out there is fixing to complain that this subject of patriotism has no relevance to a PRO94 forum. But it does! Here's how.
Let's put aside our modesty for a minute, and acknowledge that most of us are pretty good at programming these trunking scanners. Most of us know a few tricks that can reveal some fairly sensitive public safety communications, and we usually keep them to ourselves. Here's the question to ask ourselves: "If, by theft or misplacement, my scanner fell into the hands of a criminal (or terrorist), could my programming be misused in a manner that might endanger the public?"
Let's share our ideas on how to "lock" our scanners when they're not in use.

I thought the PRO-94 was triple conversion. I get more images on it than I do on my PRO-51! The PRO-94 produces a strong buzzing when I receive my local police on 453.3 MHz. It sounds like a TV raster scan.
It's in the background, so it doesn't obliterate the audio, but it doesn't appear on any of my other scanners -- PRO-51, PRO-2004, and a PRO-2006.
It's too late for me to take it back.

Topic: 1262 Message: 1265

I've had a similar problem with frequencies around 453 mHz. Take a close look at the traffic signals at a few major intersections in your area. If there is an antenna that ressembles a small TV antenna mounted above the control box, you've probably found the source of your problem. The data signals that interconnect some traffic control systems can wreak havoc on the PRO94 around 453 mHz. The FCC data base indicates that 453.3 is usually a repeater frequency. You might try looking up the input frequency for your PD, and programming that into you scanner instead of 453.3

Indeed it is. Check out this URL

http://www.trunkedradio.net/trunked/motorola.htm

Being a newbie scanner user myself I got very lost in the hybrid configuration in the documentation for my pro-94. I guess since all my services are Motorola type IIi, I'm going to have to start learning.

Hey guys

Im not sure if this should go here but, I have a Pro-94 for sale.
It's A week old if that much, the scanner is in excelent condition,
box, manuals, antenna. Im asking for $150 Money Order only. Ive done
a few sales via the internet so I need a contact number to reach you.
If you cant provide a number please dont read futher. If youre
looking for a great clean scanner with low usage
please contact me at my email address so I dont take up bandwith.

Thanks

1270. EDACS Woes

Yahoo group: pro94owners
Date: 2001-09-21 03:38:55 UTC
From: Mark
Topic: 1270 Message: 1270

Hey guys, I give up on this one. Maybe someone out there can help.

When I got the 94 (not the A) I programmed in a local sherriffs department who uses EDACS and all is good.

A while later, the scanner can no longer lock onto the control channel even though I can hear it just fine. I pick up the transmissions on the individual freqs, but hard as I try the control channel will not lock on.

Any ideas? I am just about to reset the darn thing, but I am not looking forward to reentering all the freqs.

Has anyone heard of any problems in this area?

Thanks!

Mark

Well, I'm a bit too far south to help you out in
Denver (I'm in Albuquerque), but I know what you mean
about the Pro-94 being a bit hard to get the hang of
initially. I would just read the book five or six
times in a row and then just play around with it.
It's actually pretty easy once you've just sat down
and punched some buttons for a bit. :-)

Here's a suggestion you might want to try.

I used a Radio Shack Pro91 for about a year and a half before I got the Pro94. There was no difficuly in the transition to the Pro94.

Try downloading the Pro91 manual from RS. Even though the Pro91 has been discontinued, I think they'll still offer the manual.

If this works, don't forget to return to the Pro 94 manual to pick up the details on those nifty added features of the Pro94 (Pro94A).

Good luck!

Steve:

I've got the BC100XL. I don't know if this is the same as the BC100XLT.

I married and moved away from home nine years ago, and the box and manual stayed at mom and dad's home. I'm sure I can find it, but it may require a day or two. They move things around, but never throw any of my stuff away. Memories are failing with age.

In the meantime, if the BC100XL is what you have, I know just about every trick the rascal can pull. If I can help with a specific question or troubleshooting, let me know. If the audio has died, there's a easy fix that's not in the manual.

I'll concentrate on finding the manual, and once I've got it in hand, we'll figure out the best hi-tech way to get a copy to you.

John:
Take a look at the antennas on those local cop cars. Comparing them to the antennas of known systems can give you a good hint where to search. If the antennas are tiny, you're probably looking for an 800 mHz system. A huge whip (unlikely today) probably means something on the old 30-50 mHz band.

If all efforts to find these guys fail, they may have a contract with a local trunked SMR. Take a look at message 822 for some hints on how to tackle a trunked SMR. There's no better equipment than the PRO94 for this task!

I gather the PRO94 works the same as the BC245, where I come from we
have a 13 cell UHF Motorola system, and have managed to cram the whole
lot into 7 banks, you just select or deselect the relevant control
channels in each bank and as long as you have all the associated voice
channels programmed in, it works a treat..
But if we are talking Ericsson, no won't work..

Thanks for the reply. I know the route you went through and thanks a million for saving me the time. I'm trying to neatly configure this thing. I want to use seperate banks for conventional and trunking. One system only has about 8 freqs. I was hoping that I wouldn't have all those extra channels. Oh, well. Thanks again for saving me a lot of time.

Take care!

From: Dan
Topic: 1298 Message: 1302

Clifton,

You can program conventional channels after the trunked system. the scanner will scan the trunked system, and then the conventional channels.

Also, the PR0-94A is on sale at Radio Shack right now, for $149.99. I just bought a second one today. I love a great deal.

Hey Cliff.

This will work under one condition. It the two systems are far enough apart that you cannot receive both data channels at the same time, and if the two system types are the same (i.e. MotII), and if there is no fleet code to program on either system, then it will work.

Otherwise, to recover wasted space, I suggest programming trunked freqs, then programming conventional freqs in the same bank and locking out the trunked channels while you are NOT in trunked mode. This way, there is no wasted space. If you lock the channels out while in normal mode, they will still pick up traffic while in trunked mode.

> What is the difference between the Pro-94 the Pro-94A?

PRO-94 can scan either conventional or trunked frequencies, but not simutaneously. The PRO-94A can scan both simutaneously

Thats basically it in a nutshell

Thanks, I bought one today. I have just finished programming it. I already have a BC-245, but with the sale price I bought another one. Being a BC-245 owner, I had to break myself of some bad habits (if you know what I mean), but after that, programming it was not difficult. The Pro-94 Manual was actually better written and had fewer mistakes than the 245 manual did.

Larry.

1311. Need suggestion of Radio Shack model to buy

Yahoo group: pro94owners
Date: 2001-11-01 13:58:31 UTC
From: aclassiquepair@yahoo.com
Topic: 1311 Message: 1311

I think I made a mistake, buying a Radio Shack Pro-94 on sale this week. The price was right ($150) and I thought it had what I wanted from a scanner, features my Pro-51 lacks. BTW, my Pro-51 is working fine. I am not a technical person and have recently returned to scanning after a break of some years.

My salesmen knew nothing about scanners and basically left me to my own devices.

IF Radio Shack will let me exchange this for another unit, could you suggest what I might want?

I want a scanner that scans trunk. When I got the Pro-94 home, I realized it would only scan trunks when set in that special mode. I didn't know this. I'd like to scan trunk and regular frequencies at the same time.

Also, I'd like to install software and link my scanner with my computer. The Pro-94 does not do that.

The sound of this unit is high-pitched and hissy. My Pro-51 has much better reception.

The Pro-93, Pro-92 (handheld) and Pro-2053 (desktop) fall into my price range. I suppose if the 2052 was that much better for me, I might collect enough pop bottles to pop for the extra $50.

As a novice, I'm not sure exactly where I'll settle in my listening areas, so probably a lot of options would be good for me now. I am doing police/fire right now, but want to explore other emergency frequencies, including border patrol, U.S. customs, etc. (I live about twelve miles from this sort of activity.) I want the option to see where my interests will lead me.

Do you have any suggestions? Please post to the group.

Thanks

The PRO-94 does that. Mine is doing it right now. Does the catalog number have an "A" in a box next to it? If not, the unit is quite old and lacks a couple of features present in the current version, including trunked + conventional scan.

>The sound of this unit is high-pitched and hissy. My Pro-51 has much

Odd. That's not the case with the unit I have.

>The Pro-93, Pro-92 (handheld) and Pro-2053 (desktop) fall into my

The -92 will do the trunked + conventional, has a computer interface and has text tags for channels and banks. Some people feel that it lacks sensitivity.

> I suppose if the 2052 was that much better for me, I
>might collect enough pop bottles to pop for the extra $50.

The 2052 is basically a non-portable version of the earlier PRO-94 (no trunked + conventional), with a computer interface.

You may want to visit www.strongsignals.net for reviews and more information on what's on offer at RS.

Subject: [pro94owners] Need suggestion of Radio Shack model to buy

I think I made a mistake, buying a Radio Shack Pro-94 on sale this week. The price was right ($150) and I thought it had what I wanted from a scanner, features my Pro-51 lacks. BTW, my Pro-51 is working fine. I am not a technical person and have recently returned to scanning after a break of some years.

My salesmen knew nothing about scanners and basically left me to my own devices.

IF Radio Shack will let me exchange this for another unit, could you suggest what I might want?

I want a scanner that scans trunk. When I got the Pro-94 home, I realized it would only scan trunks when set in that special mode. I didn't know this. I'd like to scan trunk and regular frequencies at the same time.

Also, I'd like to install software and link my scanner with my computer. The Pro-94 does not do that.

The sound of this unit is high-pitched and hissy. My Pro-51 has much better reception.

The Pro-93, Pro-92 (handheld) and Pro-2053 (desktop) fall into my price range. I suppose if the 2052 was that much better for me, I might collect enough pop bottles to pop for the extra $50.

As a novice, I'm not sure exactly where I'll settle in my listening areas, so probably a lot of options would be good for me now. I am doing police/fire right now, but want to explore other emergency frequencies, including border patrol, U.S. customs, etc. (I live

about twelve miles from this sort of activity.) I want the option to see where my interests will lead me.

Do you have any suggestions? Please post to the group.

Thanks

From: tobrien@thermastor.com
Topic: 1311 Message: 1314

The pro-94A can trunktrack and scan conventional at the same time. It has no computer interface.

The pro-92 / 2067 can trunktrack and scan conventional at the same time. They are computer PROGRAMABLE only.

The pro-93 / 2053 can trunktrack and scan conventional at the same time. They will be computer programable when the software is released?

The pro-2052 can NOT trunktrack and scan conventional at the same time. It is computer PROGRAMABLE and computer CONTROLABLE.

The BC-895 ditto. No EDACS trunking.

The BC-780 can trunktrack and scan conventional at the same time. It is computer PROGRAMABLE and CONTROLABLE. It can monitor I-calls (private line) on trunked systems. This may be desireable if the agencies you wish to monitor use this feature extensively.

The BC-245 can trunktrack and scan conventional at the same time. It is computer PROGRAMABLE and CONTROLABLE. It will trunk EDACS systems. Based on your requirements this may be the preferred scanner for your needs. If you only want a scanner that is computer programable you have many options.

IMHO the best trunk monitoring setup for fixed base monitoring is using the trunker or etrunk freeware applications and your PC. You may wish to search the web to learn about these applications. In short you need 1 scanner with a discriminator tap, and a second scanner that is computer controlable, a hamcomm 2-level interface, and a PC capable of running the software. There is no consumer scanner available that comes close to incorporating the features and flexability of this setup. This is the best trunk monitoring setup and does not have to cost alot if you are handy and willing to invest the time required.

Good luck with your choice.

From: LauraQ
Topic: 1315 Message: 1315

Hi, guys:

My PRO-94 antenna is loose. I've tried to open up the radio to check the post inside, but there must be a screw I've overlooked, because I can't get the case apart. Any ideas or similar problems?

Thanks for any help!
Laura

If you take the antenna off, you'll see the BNC connector is held on with a threaded ring (I forget the name). It's notched to either side. use a small screwdriver and tighten it clockwise.

Laura,

I had the same problem on several of my scanners. Went to a local Motorola service shop and bought the wrench made to tighten the antenna. Cost= less than $2.00.

The '94 doesn't have the external charger contacts needed for a cradle-type charger. You can connect a 9-V adaptor to the power jack, however, and charge the battery that is installed while using the receiver. This leaves you tethered to the AC mains.

My personal approach is to use two sets of four NiMH cells and a Maha C204F desktop charger. Use one set, charge the other. See www.thomas-distributing.com for battery and charger heaven.

Nope. Wasn't there. I guess it doesn't matter now as I exchanged it for a Pro-93. I think this will suit me better. Um...gee...I guess I have to drop out of this group now, since I don't have or use a 94 anymore! Yikes!!!

I like the flexibility the two banks of 500 channels offers. I am very happy with my PRO-94 mod 1 mk 0. The only complaint is that when scanning multiple trunked banks there is a short lag while the radio looks for the data channel. Does this happen switching between trunked and conventional on the "A" mod?

My theory, and that is all that it is, is that the 94/94A will be soon discontinued. Say you rushed out and got one of these scanners. This would probably be your second trunking scanner. When my wife saw that the dropped to $149 she offered to get me another one for Christmas. So wifey-poo has consented or finally went off the deep end and let you get "ANOTHER DAMN" scanner. How do you explain to her next spring, or whenever the next generation comes out, why you need "ANOTHER DAMN" scanner?

What I would like to see is one handheld unit that combines the 92 and the 94. I definitely like the alpha display on the 92, but I don't want to give up the 1000 channels. I would love to get my hands on a handheld that picked up Mil Air 220-380 range. I would also like to see the 94 computer controlled.

1333. Replacement for PRO-94

Yahoo group: pro94owners
Date: 2001-11-03 01:19:14 UTC
From: lmnorotsky@cs.com
Topic: 1333 Message: 1333

In my last response I put out a theory that RS might be getting ready to replace the 94 since they are being sold so cheap. Well what do you want to see in the 94's replacement? Here's mine:

1. computer control/programming
2. Alpha display
3. 1000 channels
4. 25-1300 mhz full coverage.
5. removable memory like that found in digital camers.
What if you could have these cards preprogramed with other systems that you travel to often?
6. Be able to trunk all systems.

Any other ideas?

> 2. Alpha display

Text tags are a necessity, but I'm wondering when we will see the first...

COLOR DISPLAY!

Now wouldn't that be cool! Or how about a touch-panel display like the Pronto remote; fully customizable placement of text, buttons, etc.

And I wouldn't mind it a bit if they threw in a S-Meter as well!

From: seward@northstate.net
Topic: 1336 Message: 1336

(Sorry about the previous blank post--I swear there was text in there...)

I took advantage of Ratty Ol' Shack's sale on the PRO-94 tonight. After looking, I have a question. the circular advertises a PRO-94, but says it can track trunk and conventional simultaneously. The box has catalog # 20-254, but on the back near the barcode is a sticker that has "11A00" on it. The manual's last page matches the PRO-94A manual on the website in that it has the 20-254 number with an "A" in a square next to it. (The PRO-94 manual on the site has neith on it's last page.)

So did I get a 94 or 94A? Thanks for putting my mind at ease. :-)

It's either an A or you've got them for false advertisement. My box says
nothing about an A on the out side.
I'm guessing that the only non A's around might be in some hayseed store in
the boonies (Afghanistan) that doesn't move much merchandise.

Here's my perfect scanner.....
Basic Specs

Channels 2000
Coverage 100khz/1300mhz
Banks 100-adj. as in VR-5000
Model Base,mobile,HH
Scan rate 100 cps-any/all banks
Multi-mode Yes-simutan search/scan/trunk/Digital
Conversion Quadruple
Trunking M,E,LTR(Analog/Digital)
Scan lists 10 lists of 20(200) ID's per bank
4000 max total
ID lockouts Yes-per ID
I-call monitor Yes-as in 780XLT
Steps Any-per channel
Modes All-per channel
Alpha-tagging Yes-big
Priority Yes-as in 780XLT
Power-on resume Yes
Search limits 10-as in 2035/42
Search skip 200-as in 780XLT
Auto resume Yes
Manual mode Yes
Auto-store Yes-smart
Direct sch/entry Yes
Program search Yes-as in Yupi MVT-7100
Tune button Yes-as on 2035/42 (Base)
Rev srch/scan Yes
Service search Yes-as in 780XLT
Monitor Mems 100-copy,move,swap as on 2042
Mem operations Yes-as in 2041/42
Channel count Yes
S-meter Yes-LED
Delay/skip per channel-Variable
Lockout per channel
Lock-out review Yes-as on 2035/42
Attenuator per channel-Variable
Noise limit per channel-Variable
Data skip Yes-usable
Tone codes Yes-instant/managable
Comp Interface Yes-DB9 2-way,cloning
Optional OS535 computer control (Base)
Backlight Yes-adjustable/auto
Display about 3x4"-viewable anywhere (Base)

Bandscope Yes-readable (Base)
Lighted keys Yes-1/2"
1" vol,sql knob Yes (Base)
2" tune knob Yes-w/dimple,turbo (Base)
Key lock Yes
Beep control Yes
Clock Yes-local,GMT,cont. display (Base)
Timer Yes-on,off,alarm,sleep
Battery ind Yes-30 sec beep
Weather button Yes-pre-programmed
Weather alert Yes,concurrent
Tape out Yes-1/8" (Base)
Earphone Yes-front
Ext. spkr out Yes-RCA (Base)
Antenna BNC/1/8" jack
Intl AM ant Yes-as in Yupi MVT-7200
Power (Base) 120VAC,12VDC,auto power backup,
8-AA's/Nicad's/built-in charger(100ma)
Power (HH) 12VDC,4-AA's/Nicad's/
built-in charger(100ma)
Memory non-volatile
Weight Stable

1343. Priority Talk Groups

Yahoo group: pro94owners
Date: 2001-11-03 18:49:22 UTC
From: Ken Smith
Topic: 1343 Message: 1343

Hello, fellow Pro-94 owners!

Just picked up a 94A a few days ago and have been having trouble programming it so that a particular talk group is priority when it's in trunk mode. The manual says to press PROG then the talk group (in this case it's listed as 3280) and then press PRIORITY (H/S).

It keeps on giving me an error.

Am I supposed to do this while it's not trunk scanning or something? I've even tried it with a leading zero on the off chance that it's expecting a five digit code.

Any help would be appreciated!

Ken in Seattle

Last week I went to the radioshack.com store in Denver, Co. (a very large store) and bought a pro-94 and it was a 94 (no A) with a 11A99 date code. As it turned out this radio was deaf on all the UHF freqs, so I exchanged it at the RS in Longmont, Co (a typical mall store) and got a 94A. The new radio works much better and I got the new version. I guess my point is that the old radios are still out there, so look for the A.

The reason the Radio Shack.com store in Denver still had the 94 non A?s is that they had that unit marked at $349.99, when it was selling for $249 at every other store in town and the catalog. They are real sharp at that store.

That sounds about right considering the source. About a year ago in a small town about 20 miles from Tulsa I found a discontinued (4 - 5 years ago) DSP40 digital signal processor that had originally sold for $79.00 and had been closed out by the company for about $25.00 (I bought 3 on the internet for $20.00 ea.) still on their shelf at the original price. I didn't get anywhere trying to buy it at the close out price.
The above was a privately owned store and not company owned and I suspect that was the case on the high dollar 94.

I think that the Radio Shack.com store is a company store. It started out as another failed Tandy experiment, Tech America. The concept bombed and the renamed it Radio Shack.com. It is a pretty cools store, like a Radio Shack on steroids. They have a decent selection of books, components, test gear and even some HAM stuff. It’s just very poorly run.

Oh well, a Radio Shack by any other name is still a Radio Shack :)

Ken,

You misread the manual. Mine says...

"To assign a priority to an ID, press PROG. Enter the desired ID number (list number and location number), then press PRIORITY (H/S). P appears."

(Of course, if P appears, you can probably clean it up with a paper towel. ;-))

So, you have five different scan lists, each capable of holding ten IDs. So, the first one is 1-1, second is 1-2, up to 1-0 for the tenth ID. Then in the second list, your first saved ID is in 2-1 and so on. Don't enter the actual talkgroup ID, enter the location where the talkgroup ID is stored.

Hope this helps.

1349. pro-94a Trunking Help

Yahoo group: pro94owners
Date: 2001-11-06 05:07:10 UTC
From: Chris
Topic: 1349 Message: 1349

Hi,

I am very new to trunking & confused. I followed the menu & entered in the following for my local area.

866.1875 - Trunked System (1)
866.3375 - Trunked System (2)
866.5875 - Trunked System (3)
866.7375 - Trunked System (4)
866.8375 - Trunked System (5)
866.900 - Trunked System (6)
867.1125 - Trunked System (7)
867.175 - Trunked System (8)
867.900 - Trunked System (9)
868.175 - Trunked System (10 - Control)
868.425 - Trunked System (11)
868.575 - Trunked System (12)
868.725 - Trunked System (13)
868.650 - Trunked System (14)

Now I am at the point where I am lost.

How do (And Where) I enter the below talkgroups?

04-083 - Port Washington PD Patrol 1
04-091 - Port Washington PD Patrol 2
04-092 - Port Washington PD Tactical
04-093 - Port Washington PD Detective
04-094 - Port Washington PD Narcotics
04-095 - Port Washington Administrative
04-096 - Port Washington Inter Agency

Can someone e-mail me at vector@... with step by step directions that a child could understand. Please give me a walkthrough.

You have no idea how much i would appreciate it.

Thank You

Chris

If ou set it on the control chnnel and press the SRC button it should search for all the listed below items

04-083 - Port Washington PD Patrol 1
04-091 - Port Washington PD Patrol 2
04-092 - Port Washington PD Tactical
04-093 - Port Washington PD Detective
04-094 - Port Washington PD Narcotics
04-095 - Port Washington Administrative
04-096 - Port Washington Inter Agency

1. turn on radio
2. press trunk
3. press SRC button it then searches and displays the numbers listed above.

hope this helps, thats how I did mine in PLANO TEXAS

A couple of quick questions first, Alan. Do you know how far away you are from the transmitters you are trying to listen to? If you are farther than about 20 miles and the transmitters are not on top of some high mountain or building, you may have problems hearing them. The standard rubber duck is fine for strong, close-in signals, but suffers when trying to receive signals from long distances. Also, be sure that you are entering the proper frequencies in. If you are off just one step, for instance, the frequency is listed as 159.150 and you put it in as 159.140, you will get a poor signal. Use some of the search engines available on the web to find frequency lists for your area, or stop in to the Radio Shack where you bought the radio and pick up a copy of Police Call to get a list of frequencies.

Subject: [pro94owners] New Pro 94A Owner

I just bought this scanner and I am new to scanning. The problem that
I am having is that I can't recieve and frequencies clear. Is the
stock antenae that comes with these radio's capable of clear
reception or do you need to do something else. I am very close to
returning the scanner and giving up.

Any help would be appreciated.

Thank You

Hi Again,

Actually I live ground floor of a 2 story appartment building. When I purchased the scanner I also purchased a Whip type antenna thinking it would help.

I have heard that if i buy a regular TV Antenna & adapter it will work better also I have seen alot of messages about adapting old cell phone antennas to the scanner. Will such a think work with low cordless phone 49 mhz cordless phone type frequencys?

Living in an apartment what is my best choice as far as antennas go.

My brother lives 2 apartments buildings away from me & I cant hear his phone conversation on his GE 10 channel cordless phone. I know its against the law but he is aware & curious as well

Thanks

Chris

A regular outside TV antenna is a good "all-band" type antenna. A
dedicated scanner antenna tuned for the frequency range(s) you're
interested in is a much better choice.

A cellular type antenna is geared towards the 850 MHz band -- won't
do a damn bit of good at 49MHz!

Even with an antenna optimized for 49MHz the best you're going to do
is about 1/4 mile range (under ideal conditions), unless you go with
something like a directional Yagi arrangement that has a good amount
of gain on that frequency -- those 49MHz telephones just aren't
powerful enough to travel great distances... I can remember them just
barely working floor-to-floor within the same house!
```

Also you (and your brother) probably have a lot of metal surrounding you in your apartment, metal stud walls, metal bar joists (floor & roof) and probably even a metal pan floor and roof deck ☐ not a good arrangement for receiving weak signals with your scanner! An outside antenna will do wonders in this environment.

Hi, What about a signal amplifier. I see one at the radio shack website for 39.99 but i dont want to waste the cash if it will not work for me.

I went to my brothers apartment & my scanner picked up his 10 channel real clear but not in my apartment. Putting an antenna outside is no option for me here in the apartment.

Does anybody know of a good idea I could use or even a good indoor antenna that will be better that the small whip antenna I am using right now?

Thanks

Chris, do you have an air conditioner? I have used magnetic mounts atop
of them, and did fairly well with them..
A signal amplifier sometimes can cause noise and inter-mod problems.

Frank,

I'm not that familiar with edacs systems. The closest one to SE TN is the Gadsden AL system, about 125 miles away. I have monitored the NO system while visiting the Gulf Coast.

If this system works anything like a Motorola system, there are things like data signals and "private mode" conversations that will show up on the activity bars without coming through the Pro94 as a conversation. Try listening to the bank that you have programmed your frequencies into in the conventional mode. Although the conversations will be disjointed, it will then let you hear everything. This should at least give you some idea what all of that activity is.

That I know of, there aren?t any current scanners for sale that can trunk the MPT-1327 systems. Sorry. :-(I think the only way to do it would be either to conventionally scan it or to go buy a radio just like the systems users have, and have it programmed just like theirs. I think the conventional scan would be a lot cheaper if you?re looking to go the cheapest possible.

I've read some people saying they used a cellular phone antenna with great results. The frequency range would be close to being right. At least it would be better than those "all band" antennas.

Don't laugh. I take my 94 everywhere with me, like a kid and his blankey. Anyway I had hooked my 94 to my buddies CB antenna, it helped some because it got the antenna out of the car and higher in the air. I left my rubber ducky in his car. The next day at work I was having major withdrawals with no scanner. I started to mess around with stuff to use as a temporary replacement. I work in a steel building that is just outside the area covered by the trunked system. So even with the original antenna reception is not the best. So I took a PAPERCLIP and put it in the antenna hole. This worked much better than the original in my case. I don't know why but it did. Give it a shot if it don't work for you, all you are out is about $0.02.

I recently got the 3 inch 800MHz antenna from Scanner Antenna Specialist for my PRO-94. The Antenna works awesome, compared to the rubber duck, the static disapears. This antenna can do UHF also. This antenna is good for cities like Boston, where you have the Mass State Police TRS, and the 460.MHz Boston Police System.

No. I tried, and it won't hurt your scanner, however, they'll only charge about 25% before they stop.
your scanner was only designed to charge NiCAD,not NiMH or LiION.

I use them in my 91 and 94 and have had no problems. The Shack sells a pre packaged set of 4 1600 mAh batteries and a wall charger for a bit over $20.00. I bought two of the sets and one extra set of batteries (snuck them in the front door one set at a time just like I did the 91 and 94).
When I use my handhelds stationary I use an amplified speaker that has a wall wart and keep the volume on the 91 or 94 at it's lowest level so the batteries charge last for ever and ever.

The RS part number is 23-427. It is also the same charger that also comes
packaged with 4 1600 mAh AA batteries for about $21.00, a real savings over
the individual prices. It is a 6 hour charger that just plugs onto the wall
outlet and has a switch to change from Ni-Cd to Ni-MH.
Another place, www.cheapbatteries.com/ advertises the 1600 mAh cells at 2.25
ea when purchased separately or 1.75 ea in quantity. I thought that I might
order some and see how well they work but have not got around to doing so
(too many other irons in fire).

Joe,

I just last week bought 1600mah batteries at my local Walmart.(read the package to be sure they are 1600's). They also sell several chargers. One holds 8 AA cells. it does tell NIMN from NICAD . They also have a smaller 4 cell charger that is great if size is a concideration. I also have Radio Shack batteries, but these Rayovac, and Eveready batteries are $7.00 cheaper like 3 sets for the price of 2.

Thanks ,
Dan

You could go to your local R/C hobby store and buy some 3000 mAh cells. Buy a charger from them that can handle them. They will last a long time.

My manual (date code 06A01) specifically mentions to put the switch in the Ni-cd position when using nicads or nickel-metal batteries. I'm not that confident that the charge controller is smart enough to deal with the ni-mh's or not but I am please with the little Digipower wal-wart charger I bought at Wal-Mart for $10. I also bought several of the Ray-o-vac 1600ma ni-mh cells and use themin my digital camera, scanner and other electronics. I haven't been a fan of Ray-o-vac in general (they make junk alkalines) but I must say that their ni-mh cells are winners.

Just a quick note on nicads versus ni-mh:

- Nicads are cheaper, ni-mh prices are coming down

- Nicads supply more short-term current, ni-mh are longer lasting at lower currents

- Nicads can be charged about 1000 cycles, ni-mh about 500 cycles

- Nicads develope voltage depletion due to cd crystallization (memory) but can be reversed to a certain degree. Ni-mh is not totally immune but does not suffer the same severity

- Most nicad chargers that are current or crowbar limited work fine in ni-mh charging environments.

in general nicads are best for high current demand such as transmitters, r/c cars, hgih output flashlights, etc. Ni-mh perform best when the current draw is moderate and sustained...like receivers, scanners, digital cameras, cd players, etc.

I still can't get over how much scanner you get for $149! Just bought mine today...

Best regards,

Tim Smith

I have to take issue with this comment. All of my reading indicates
that ni-mh batteries are easily damaged by overcharge, and to protect
them, you must use a charger that detects the fully charged condition
and terminates the charge.

Jim, you are correct, ni-mh batteries are a special deal. They require a charger that can correctly detect the peak of that battery. That's what I am thinking about too, a ni-cad charger can charge ni-mh batteries, but will most likely false peak. Probably false on the low side and you won't get a full charge, thus wasting money and time. It is the best idea to go out and buy a charger for ni-mh batteries just to be safe. This is what I know from being involved in R/C cars. If you want to find some good info goto the rc car action web site. Here's a good link: http://www.rccaraction.com/articles/NiMHbatcare1.asp Basically one thing that this article talks about is how a peak detection charger works. It detects a voltage fluctuation to determine that the battery is charge. Ni-cad have a much sharper voltage drop than ni-mh and that is why the charger must really be designed to charge those batteries. Whether or not this circuitry is in the 94, I don't know.

Guess I could be dreaming but am sure that I read in the manual that it was
okay to use NMH batteries. Regardless of the manual I have used them in my
91a for over a year and in my 94 for a month or so with no problems.
I use a 9 volt 350 ma charger that I had kicking around the house and out
fitted it with a plug to match 91 and 94's and also the RS 23-427 charger
that I mentioned earlier. So far nothing has malfunctioned.

Rob Mills ~~

PS, Have recently started using the NMH batteries in my camera motor drives
and flashes. It's a little early to brag but so for they look good to go
there also.

1400. New Pro-94(a) user

From: jjanka@yahoo.com
Topic: 1400 Message: 1400

Hello all,

Looking for some info about the Pro-94 scanner.
I live in the north-western PA area and am looking for info from anyone on freqs for trunking and types in the area.

I have seen and attempted to program several "Yx" type freqs I have found in the FCC database for the area I live in. There are 800 Mhz along with Uhf and Vhf freqs. I "think" the Uhf ones are LTR which the Pro-94 doesn't do, but I can hear the majority of the conversations in the regular mode. (Setup 6 seperate banks on the "B" side trying them out.) And I do hear a "control" channel in each of the banks I have programmed.

Anyhow, I'm not sure if I am entering and programming them correctly, But I have gone over the manual "numerous" times and think I am doing the entering OK. But not knowing if their type I or II and I believe PA is going to go digital state wide someday, maybe there isn't anything in my area that is trunked that the Pro-94 can listen to?

Can anyone help me out? (Been to numerous websites researching)

Thanks!

1401. NiMH batteries

Yahoo group: pro94owners
Date: 2001-11-21 16:16:12 UTC
From: rojo_grande@yahoo.com
Topic: 1401 Message: 1401

Been using them in several scanners (ICOM R-10,Icom Q7A, Pro 64, bc200xlt, pro 30, Pro 94) for 2-3 years and have several varieties up to and including 1600 maH - most of them I got from Sunn Battery Co. Jacksonville Fla (ptron1 on eBay) www.sunnbattery.com -All work great

SUNN also has some chargers with NiMH special features - I have 3 from them - (1) MAHA 124 for mobile use & 2 Tysonics .
SUNN is great to do business with either eBay or direct

They are already in my new (11/19/01) Pro -94A
- my questions to the group are
- How do you know for sure that you are actually following a trunked system - i.e. that you really got it programmed right and into trunking mode ?
-Still struggling thru the trunking programming section of the manual.
Is there any better tutorial out there ?

The MAX800 works well,but is a little awkward for portable use. The radials always seem to catch on something. And the connection between the BNC connector and the hardline is a little fragile.Best duck I've found is from Antenex.Model# DEXE 821 BNX This is only available with skirted BNC connector,but that's an easy fix with a razor knife. This is a center fed half wave antenna and has a lower operating angle.Best thing I've found yet in a duck.

Thanks for the tip.
Alas, there are no YX services in my area.
I said Yx in my initial post, (the x being small, my mistake)
here are the services / freqs (sample, partial listing)
in the Erie Pa area:

YB 864.3375
YF 866.0125
YG 157.5600
YP 851.0875

So far I still hear the services using the original
VHF / UHF frequencies, though the local police have
computers in their cars.

YG is quiet, haven't heard a thing.
YP seems to have a "bapping noise"
YF and YB are like a "roaring noise"

"Maybe" there aren't Edacs or E1, E2 being used in my area?
(for analog voice anyhow)

Thanks for the reply though.
Continuing my quest to figure this out! <g>

1405. Re: New Pro-94(a) user

Topic: 1400 Message: 1405

Here's another tip:

Take your lattitude and longitude for Erie, PA, which is

42:07:33 N
080:05:12 W

Return to the FCC database, and use a lattitude/longitude (service) search, using of point radius of 5 miles or so, and a service code of YX.

I think that clicking here will give you an idea what the search results should look like.

http://gullfoss2.fcc.gov/cgi-bin/ws.exe/genmen/uls/lat_long_res.hts?db_id=19&rows=0&lat=151390&lon=287958&hi_lat=151916&hi_lon=288666&ladir=N&lodir=W&radio_serv=YX

Anyway, once you get your search results, be sure to click the underlined callsigns, which will lead you to a wealth of additional information about additional frequencies, transmitter locations, and transmitter power.

Good luck!

Anyone using the Pro-94 to listen to rail? I really havent kept up on the latest from Radio Shack, until I saw the current sale for $150. I don't currently monitor any trunked...and LAPD is digital now...so it will be a while, if ever, before I will monitor them again.

My 2500XLT stopped receiving 800 Mhz good...so I have been looking for something with that coverage. I use my Pro-75 for my current rail activities, with a R77A antenna.

The most common mistake (not sure if this is your problem or not) is trying to load trunk and conventional channels in the same bank. Won't work. You must reserved an entire bank (ie channels 1-50) for trunk freqs. And only one system per bank, too.

Good luck,
John.

From: Tim Smith
Topic: 1407 Message: 1410

If you are talking about the Pro-94, you can load trunk and conventional frequencies in the same bank. The mistake is how and wat sequence they are loaded.

The wrong way:

Enter normal trunk programming mode
program control and voice channels associated with trunk
program conventional channels in same bank

The right way:

Enter normal trunk programming mode
program control and voice channels associated with trunk
exit trunk programming mode
program conventional channels in same bank

I've found much fewer missed conventional scans by bank sharing between the two. By default the Pro94 holds or delays between trunk and conventional banks. By having conventional frequencies in the same bank I've found improves scan response times. It's not as easy to manage frequencies by having them in the same bank but if for some reason you want to, it's possible.

From: Tim Smith
Topic: 1407 Message: 1412

Not sure about the 94...I have the 94a...

By the way...in regards to the 94A audio...the amplifier has some tremendous drive capabilities. In connecting to an external 4" speaker I would rate the audio on par with some of the better desktops...

Doesn't the 94a allow you to do that? I haven't tried it on mine, but I remember reading somewhere that the 94 won't allow trunked and conventional on the same bank but the 94a will.

I agree. I picked up a pair of $10 speakers at Rat Shack and plugged them
it. Only one speaker had sound so I cut off the other speaker. It works
great! And it's SO much easier to hear when you're driving.

1414. Re: Pro-94 and Rail Traffic

Yahoo group: pro94owners
Date: 2001-11-26 18:22:02 UTC
From: Dan
Topic: 1406 Message: 1414

Karl,

I monitor rail frequencies with my 94A. I have about 25 to 30 frequencie in my scanners, with the mag mount Radio Shack antenna I can usually hear these frequencies between 30 to 60 miles away from the tracks.ie. 30 to 60 miles south or north of a East West line.

For the price, the 94A is great. Take 100 channels of the 1000 and enter all of the rail frequencies. You may be suprised what you hear, outside of the listed frequencies.

Have fun, PS The R77A is a great antenna. I also use it.

Dan

From: Mark M
Topic: 1408 Message: 1417

I don't know about the coaches stuff, but I know that
at football games, most of the head refs wear a
wireless microphone. I know ours (Texas Tech Univ.)
uses 171.245 MHz NFM. There are some other freqs you
might try:
169.445
169.505
170.245
170.305
171.045
171.105
171.845
171.905
Also, some Police dept. use these when they make a
traffic stop. I like to scan these and listen to
people try to get themselves out of a ticket.
Another note about the refs--when they talk over the
loudspeaker--make sure your ear is not right on the
earpiece. It changes modulation or something. Haven't
figured out that one yet. :)

Hope this helps a little.

Probably not. I work for a well-known company that makes these thing.
Although I work in another area, I can probably find out; but I think
they use a number of techniques to prevent eavesdropping by the
opposing teams.

From: Ken
Topic: 1407 Message: 1420

Tony, you may have done this... There are three 400mhz military trunk systems in my area. They are all digital but but I finally was able to track their digital signals. You have to be sure to change the offset frequency to 12.5 khz. Here are the instructions from the user guide:

Programming the Base and Offset Frequencies

To properly track Motorola VHF and UHF trunked systems, you must program
the applicable base and offset frequencies for each system.

1. Set the scanner for conventional scanning. Press PROG then press TRUNK

2. Press the number key of the bank where you want to store the fleet map

3. Repeatedly press \/ or /\ to select E2-VHi or E2-UHF, then press E. A previously programmed trunked frequency appears.

4. Press DATA (ALT). The preset base frequency appears.

5. Enter a desired frequency.

6. Press DATA (ALT). The preset offset frequency appears.

7. Enter the frequency using the number keys according to the following guide.

For Motorola Type II VHF, (E2-VHF Hi band) use 5 kHz steps between
5 kHz - 100 kHz.

For Motorola Type II UHF, (E2-UHF band) use 12.5 kHz steps between
12.5 kHz-100 kHz.

Sounds like you're plugging a stereo cord into a mono jack. Go to Radio Shack and get a 1/8" stereo-to-mono adapter plug and you should be okay. The plug is about an inch long, takes a stereo plug in on one end and has a mono plug out on the other end. Shouldn't cost more than about $5.

Worked Great!
Thanks for the tip...
I have done that before doing "ALL"
and for whatever reason I didn't get any YX freqs.

Did have to do a 10 mile search though to find them.
Now for the bad news :(
Programmed them in and got the 500 msec "blip".
Looks like LTR trunking is popular in our area.
But been catching conversations on those freqs.
Guess I'll put up with the annoying "blips". <g>
Plus it looks like Pennsylvania will be using ASTRO in the future.

Got the Scanner for the $149 sale price,
and bought it initally for the extra channels.
200 wasn't enough anymore.

Anyhow just FYI,
Took the antenna off of my old Pro-37 and it improved the reception
on the 94. (Own a Pro-51 also). The protective case came today and
it "muffles" the hiss enough that I'm used to how it sounds now.
So until they make that "perfect scanner" I'll hang onto the 94 for a
while!

> Good luck!

Thanks for the help!
Learned alot in the last 2 weeks about trunking...
And I'm alot happier with the 94!

Programmed them in and got the 500 msec "blip".
Looks like LTR trunking is popular in our area.
But been catching conversations on those freqs.
Guess I'll put up with the annoying "blips". <g>
Plus it looks like Pennsylvania will be using ASTRO in the future.

Got the Scanner for the $149 sale price,
and bought it initally for the extra channels.
200 wasn't enough anymore.

Anyhow just FYI,
Took the antenna off of my old Pro-37 and it improved the reception
on the 94. (Own a Pro-51 also). The protective case came today and
it "muffles" the hiss enough that I'm used to how it sounds now.
So until they make that "perfect scanner" I'll hang onto the 94 for a
while!

> Good luck!

Thanks for the help!
Learned alot in the last 2 weeks about trunking...
And I'm alot happier with the 94!

Jim J

From: Dave Reingold
Topic: 1418 Message: 1425

Hi: Does anyone know the frequencies for NYC Transit- those used for communications among towers, motormen and conductors on the subways? My Pro-94 scans up and down and up and down and detects nothing at all on any of the bands. Up on the street is no problem. TIA, bye, sid.

Sid:
Check the Radio Shack "Police Call" volume for New York. It should be available at your local Radio Shack store. Look at the Railroad listings at the back of the book. In there are the listings for the NYC Transit and the other transit systems that serve New York City.

When I visited New York City a few years back, this is what I did and was able to hear a reasonable amount of radio traffic both in the subways and when in the apartment where we were staying in the north Bronx.

From: elliston@ix.netcom.com
Topic: 1400 Message: 1427

Jim:

I was unfamiliar with LTR because it's not in use in the SE Tennessee area, as far as I know. After reading your message, I followed some links from trunkedradio.net and found out a little about it.

There is encouragement for those areas going to the ASTRO system. Take a look at http://groups.yahoo.com/group/chattradio/message/1213

Assuming that a digital scanner is slated for sometime late in the year 2002, I suspect that we'll see some really good pricing on analog scanners during the coming year!

Thank you very much. I had already downloaded the material from Charles Hargrove's site but it did not cover any of the train/dispatch communications that I want to hear. I do get a certain amount of dispatch traffic on 160.5 but it's simplex. I still have to learn efficient use of this critter. It's my first scanner and takes some getting used to. Enjoy, bye, sid.

The answer, for Telex headsets at least, is no. They are digitally
encrypted and have two levels of security code, according to the
customer service tech I talked to today. I'm sure other brands use
similar strategies

Subject: [BC780XLT] CARMA Meeting Dec 8
Date: Wed, 5 Dec 2001 07:36:27 -0600

Come One, Come All!

The next meeting of the Chicago Area Radio Monitoring Association is this Saturday, December 8 2001 at Phillies Pizza, 63rd and Kingery Hwy (IL-83) in Willowbrook.

We start arriving about 11:00 or 11:30, but please arrive by Noon for lunch. You MUST buy a lunch so that we do not tick off the restaurant. (They have been spectacularly nice to us in the past few years, let's keep them as happy as we are!) They have great pizza, fried chicken and beef sandwiches at great prices.

Several people will bring scanners and accessories for sale and trade, look for handouts (of the paper variety) and a lot of scanner information. Look for info on a few new BC780XLT accessories available now or soon to be displayed.

To get there from I-55 get off NB on Kingery (IL-83) and turn left at 63rd. Turn left at the first light into the shopping center and Phillies is just to the right.

From I-294 North get off at Ogden (US-34) west and take 34 to IL-83. Take 83 south to 63rd St, turn right and the left at the first light.

From the south take I-294 to SB I-55, then IL-83 north to 63rd St.

See the CARMA Web Page at www.carmachicago.com for a map and more details.

1433. 94A date code

Yahoo group: pro94owners
Date: 2001-12-11 21:47:19 UTC
From: youngiesch
Topic: 1433 Message: 1433

What is the earliest date code for the 94A? Last week I bought a 94 and later found out about the 94A and re-read the ad in the flyer. It said that the advertised scanner was capable of scanning conventional and trunked channels at the same time. I called the RS store and they are getting me a 94A with a date code 6-01.

1439. Reprogramming the Pro 94.

Yahoo group: pro94owners
Date: 2001-12-17 01:15:20 UTC
From: Delphinios
Topic: 1439 Message: 1439

Okay, I've been doing a bit of research into the Pro94..
I'm looking to break the built-in means of locking out frequencies.

As we all know, the Pro94 is currently unhackable, as in, nobody's done it yet.
However, As I was repairing my unit from a recent three foot drop, I started to get curious..

I noticed an odd port on the board, what looked to me like a standard 9 pin serial interface.

Upon researching the actual CPU of the Pro94, I found some seriously useful information.

The Chip itself is a Mitsubishi M30624FGLGP. The pins, 31-39 are directed to the aforementioned
port, and I found a very specific paper detailing the exact function of those pins it was connected to.

http://www.mitsubishichips.com/data/datasheets/mcus/mcupdf/ds/62eds.pdf

I['m thinking, Does anyone know if this is able to be flashed?
I'm thinking that I could hook up a connection from this to my computer, and have it dump the ROM in bianary to my
own serial port on my computer. This will allow me to reverse-engineer the programming, and potentially modify it to
scan any frequency the Pro94 is physically able to listen to.

As a last note, I'm working on this, not to illegally listen to Cell phone conversations ("Hey baby, why don't we go out and do the dirty dance while my wife's gone?" Oh.. That's interesting.. Not.) but more of wanting to improve my own knowladge of how embedded devices work, and in the sum total, find out *just* what I can do with what I have. It's also a cool project, as noone's done it yet, and the Pro94 is touted as being 'unhackable'.

Also, if there's any place (Mailing list, Newsgroup) that this would be more appropriate in posting, please tell me.

Thanks for any information or ideas you have.

From: John Little
Topic: 1440 Message: 1440

I have a 94 and if it can be hacked to the point of being to download freqs, that would be great. I like my 94 but with 2 banks of 500 channels I have decided to NEVER ever again by a scanner that can not be pc programmed and I'm pretty sure I do not want to do without alpha tags in the future ether. But with the 94 if I could at least pc program it, that would make my day.

Well, that's theoretically possible..
But not my main goal, though it will be a useful one.

I'll keep it in my mind while I work on this project.
If I see an oppertunity to figure out how to do so, then I will.

At the least, it will require building an interface to the embedded chip.
I intend to fully post any information i find during the course of the project.

> I would give my left arm to be able to p/u mil air 220ish-380
>

Not that I would want your left arm :) but you could pay much less than an arm to pick up 220-380. Just buy a wide band receiver such as the Icom R-2, R-10, or if you are a ham, a Yaesu VX-1, VX-5, Icom Q-7.

Mind you, these are receivers, not scanners, so if you treat them that way, you'll be happy. They do scan, but at a pretty slow rate and they often have just a few banks (the amateur radios often have just one bank).

Have fun,
Roy

The manual you pointed us to indicates the p/n meanings and if I
read it right ;-} it seems to indicate a flash memory,
3V version!!

M - \
3 - --- M16C family
0 - /

6 - \
2 - --- M16C/62 Group

4 - RAM capacity (no specific meaning to # , 20K Byte)

F - Memory type: Flash Memory Version

G - ROM Capacity G=256K Bytes

L - ?? typically 3 chars for ROM number, blank for one time PROM,
EPROM, and flash memory version.

G -\
P -/ Package type GP = 100P6Q-A

Good luck in trying to read the contents!!!!
Regards,
Minor K7YJ

Thanks! I've really been thinking hard on this. Being at a University that has appropriate equipment, really helps. =-}

I'm tracking down a flat ribbon cable to plug into this supposedly serial connector on the board..
From the looks of it, it's actually got three serial interfaces, two reserved internally.

I only have to assume for the moment, that the third interface is where they flash it originally, left there incase they need to do ROM upgrades.

Now, I just have to hook it up, and see if I can't get it to dump the ROM in Binary on one of the other pins. If i can do that, then it's all there in software, and I just need to reverse-engineer it.

Maybe we can eliminate/modify that dang "Pro-94" message at boot.

Someone that has a 94a, if you would, open your unit up and see if you have the same chip, or if it's a different model (Mitsubishi M30624FGLGP).
If it *is* the same chip, then it would be rather easy, (once I hack this interface and post instructions on how to do so) to have someone else pull their ROM from a 94a to let the rest of us burn it on our scanners!

Wooo!

1446. Re: 94A date code

Yahoo group: pro94owners
Date: 2001-12-18 00:04:55 UTC
From: youngiesch
Topic: 1433 Message: 1446

I took my 94 back to the RS store and I picked up my 94A tonight. It has the auto backlight option and it will scan trunked and conventional channels at the same time. The date code is 06A01. Anything after 06A00 should be a 94A.

1447. Problem..

Yahoo group: pro94owners
Date: 2001-12-18 06:15:12 UTC
From: Delphinios
Topic: 1447 Message: 1447

Well, I think I've found why nobody's hacked the Pro94 yet.

According to this manual I found,

http://www.adv-transdata.com/User_Guide/UG_PGM1000_v3.pdf

It says (and this has been verified somewhat by the ROM flasing programs for the M16C family, I've downloaded)
that There is a 7 byte 'ID Code' set into the processor's ROM. If This isn't Passed at boot,
or the ID passed dosen't match the one in the ROM, then it won't allow the ROM to be read/written.

After calculating over twenty-two thousand years to brute-force this passcode, (Assuming 1 try per second, 256^7/60/60/24/365/100/1000 = 22849)
I figured this would not be economical to try. Now, I haven't verified the Pro-94 has a ID code set, but
I'd imagine it does, or it would have been cracked *Long* Before now.

I feel an odd need to verify this, so I'm still going to build my equipment and at the least, check this out
as far as I can,, But unless someone knows somebody inside Mitsubishi that knows this 7 Byte Id Code..
Then we're all dead in the water.

Hmm. *considers writing a distributed client to try and crack the code..* Nah.. =-}

Any Suggestions or Ideas?

While I have heard of this 7 digit code before and was told before that is why the Pro94 is shunned by crackers. I would be interested if you decide to write the distributed client to crack it. I have 8 pcs that are 400Mhz or faster to use for that ;) Brings us down to aprox. 6000 years right there ;)

Yay for Education...
I was actually wondering why I seemed to be the only one who
was trying to crack the Pro-94.. Apparently I know now.

The 'Distributed Client' was an offhand, sleep-deprived comment.
I mean, How would you write a distributed client, that would still have to access the hardware.
You wouldn't be able to write a simulation, because it won't let you read the Code without this 7 Byte Code...

Well, at least I have a better idea of how embedded devices work.

I still wonder if you could put Linux on this..=-D

(Or, the gratuitious, "Imagine a Beowulf Cluster of THESE!" Hehe. I Have an Excuse... I'm still sleep-deprived..)

no, each "site" would have to have it's own pro94 to check against, but for example here, i dont see why all 8 pcs couldnt share the same hardware. Each site gets a range of numbers like 0000000 to 1000000, etc.

Because, I believe the ID has to be passed 'on-boot'. It has to be reinitialised each time. and even then, eight computers would be *way* too fast for the chip. even assume 100 attempts a second (if it dosen't have to be passed on-boot, but just on-access), you wouldn't be able to do more then the chip could do. one computer testig as fast as the chip can handle, would be the only thing you'd need.

Now, if the chip could handle 10,000 requests a second, and yoru computer could only do 1250 accesses a second, then you would need eight computers,,
But I don't think it could handle *that* much.

1453. A review of the 94a

Yahoo group: pro94owners
Date: 2001-12-19 15:57:32 UTC
From: d_stew
Topic: 1453 Message: 1453

Hi everyone. I bought my first Pro-94 at the beginning of this year, and ended up with a pre-94a model. When I found out about the 94a, it was too late to return the scanner I had for replacement. I've been itching to get a 94a ever since.

Well, I finally bought one yesterday (date code 07A01), and wanted to give my thoughts on what I think so far.

YEAH! for the auto backlight feature. I am SO tired of having to fiddle around in the car at night to hit the light button, so I can see what ID/freq I'm hearing. The only drawback is the faster drain on the batteries. I can DEFINITELY live with that for this terrific feature!

The 94a's reception is absolutely no better than the 94. I was hoping for a little improvement.

It does NOT actually scan conventional and trunked at the same time, like I've heard here, and like the manual says. Here's what happens: It scans the trunked channels one time through the freqs, then switches to conventional mode to scan them one time through. So, there is a second or more delay, depending on how many freqs you have programmed in, between conventional and trunked freq sweeps. Now, It's great that you can scan both, without having to switch between conventional and trunked modes, but it doesn't REALLY scan both simultaneously, like the manual says.

There's not much else that's different, as far as what I encounter in my use. I am rethinking how I have all my banks programmed, as far as which trunked and conventional freqs I have in the same bank. Here's why. Before, when I wanted to listen to both at the same time, I would just lock-out the trunked control channel (which doesn't change on the system I listen to) and even though I couldn't see which ID I was listening to, I could hear both in the same bank. With the 94a, if you lock-out the control channel in conventional mode, it won't lock onto it in trunked mode, so it won't properly scan the trunked side.

If anyone can dispute anything I've reported here, please let me know, but I'm pretty sure what I've reported is accurate. Also, in case you're wondering, I'm listening to MOT type II and VHF freqs primarily, although there are some UHF freqs I listen to in the 400MHz range once in a while.

I hope this wasn't too long.

Dave in Oklahoma City, OK

Topic: 1447 Message: 1459

Maybe, if it wasn't stored on the chip itself..
basically, from what I can tell, the setup is as follows..

The ROM (That's on the Mitsubishi MicroController holds the instructions on how to scan, what to display on the screen (whhich is sent to a second controller for the LCD), and any hard-coded information. This includes the 7 Byte number that controlles read/write access through the external serial interface. There's nothing that requires this 7 byte code, except for reading the ROM or writing a new ROM. This is done through the aforementioned serial interface and from what I can tell, nowhere else.

There's a seperate bit of non-volatile memory for storing frequency banks, or other dynamic information.

As for the rest of the board, the mocrocontroller does nothing but send instructions and listen for specific information. Nothing on the board would need to pass this 7 byte code to the chip.

However, please don't let me deterr you from trying to use the logic analyzer anyways and exploring as deep as you can, you may find something we've missed!
This 7 Byte code is a big brick wall it seems.

I think the gentleman is saying that this code (password, if you like) is only applied (appears externally) during the factory programming routines. They have the code, I don't think the chip is going to present it externaly for you to look at. The code will have to sneak out of the backdoor of the authorized factory centers. Hey, maybe they could give it to some Capital Hill politicians for safekeeping.

Danny,

Be sure that the model you purchase is a Pro-94A model(Cat no
20-524A not Cat 20-524 without the A) if you want to follow trunked
systems and conventional frequencies at the same time.
Also, read the manual more than once to understand it since it is not
the most user friendly manual you will ever read.

Good Luck and Happy Holidays.

read page 250 on
http://www.mitsubishichips.com/data/datasheets/mcus/mcupdf/ds/62eds.pd
f (the link you posted earlier)
It says the ID is only 8 bits...
so... 2^8 / 60 = 4 minutes :)

Dan
-----Original Message-----
From: Delphinios [mailto:bl00@...]

Well, I think I've found why nobody's hacked the Pro94 yet.

According to this manual I found,

http://www.adv-transdata.com/User_Guide/UG_PGM1000_v3.pdf

It says (and this has been verified somewhat by the ROM flasing
programs for
the M16C family, I've downloaded)
that There is a 7 byte 'ID Code' set into the processor's ROM. If
This isn't
Passed at boot,
or the ID passed dosen't match the one in the ROM, then it won't
allow the
ROM to be read/written.

After calculating over twenty-two thousand years to brute-force this
passcode, (Assuming 1 try per second, 256^7/60/60/24/365/100/1000 =
22849)
I figured this would not be economical to try. Now, I haven't
verified the
Pro-94 has a ID code set, but
I'd imagine it does, or it would have been cracked *Long* Before now.

I feel an odd need to verify this, so I'm still going to build my
equipment
and at the least, check this out
as far as I can,, But unless someone knows somebody inside Mitsubishi
that
knows this 7 Byte Id Code..
Then we're all dead in the water.

Hmm. *considers writing a distributed client to try and crack the
code..*
Nah.. =-}

Any Suggestions or Ideas?

07A01 is a later date than my "A" model. Are you certain that there is not an "A" in a square just to the right of the catalog number on the back plate? If you can turn on "Auto backlight" by holding the backlight key down when turning the unit on, it's an "A"

Strange, mine has a date code of 06 A 01 and it has an "A" inside of a square
just after the model number. You can't see the "A" unless you remove the belt
clip.
If you purchased yours during the price decrease to $149.00 you have every
right to return it and demand an exchange (stomp your feet) as their ads have
definitely described the "A" version.

That tell you the number of active frequencies in use at the same time on that bank. You will never see more "blocks" lit up that the number of frequencies in your trunk bank.

It's a good indicator that if you are stopped on one talk group and you see more than one block lit up you can press SCAN sgain to go the next busy channel.

A discriminator is the technical name for the FM detector, the circuit
which recovers the audio from the FM RF signal. A discriminator tap is
used, among other things, for high-speed data links because it bypasses
all the audio shapeing and filtering that follows.

> I have never heard of discriminator before and i have a C.B. shop for 12

Better bone up and get yout FCC General Radiotelephone ticket so you
can LEGALLY work on those CB rigs. This is basic stuff.

I'm not sure..
I believe that there is a circuit, somewhere past the aformentioned discriminator, (I'm not sure if it's before the parts that clean up and condition the audio). This circuit looks for data-like patterns in the modulation of the signal. Sometimes it takes a few seconds to detect data transmisions, but if you wait for a moment, it usually resumes scanning again.

Please correct me if I'm wrong, It'll improve my understanding of how these radios work.

1488. Here's a good question(s)

Yahoo group: pro94owners
Date: 2001-12-25 04:16:59 UTC
From: robrtaylor
Topic: 1488 Message: 1488

I have 4 banks full of frequencies. For every bank, I have 50 talkgroup ID's. Now, when I'm doing an ID SCAN I see banks 1 thru 5 up top. Am I only scanning 50 ID's at a time, or am I scanning every ID I have entered? No banks are locked out, no ID's are locked out, all are open.

Also, I have more ID's than frequencies. What I want to do is program a set of frequencies into (for example bank #5) like the data plus whatever else freq's I need, then plug in 50 more ID's. My theory is that the 10 or so frequencies will open up the bank to accept the ID's that I want to hear, and all the freq's in banks 1 thru 4 will work with the ID's I have in bank #5. Does that sound right? Do I make sense? Will it work smoothly? I just don't want to be entering a bunch of numbers and my idea be bad.

Thanks group.

1489. Adjusting telescoping antenna

Yahoo group: pro94owners
Date: 2001-12-26 23:59:05 UTC
From: thominca
Topic: 1489 Message: 1489

I just got a PRO-94(A) from my wife for Christmas and I love it. I am mostly interesting in listening in to railroad frequencies (159.810 thru 161.565).

I have a telescoping antenna (RS cat #20-006A) that looks likes this:

```
T
|
|
|
|
[ ]
|
|
---
```

where the [ ] represents the center loading coil. If I want to adjust the antenna length to match the 1/4 wavelength of the frequencies I am most interested in, then 1/4 wavelength in inches = 2950 / Mhz, or in this case 2950/160.5 = 18.3 in. (I calculated 2950*10^6 as 1/4 of the speed of light in inches/sec. The instruction sheet that came with the antenna used a sightly different formula for setting up a transmit antenna, 2834 / Mhz -- not sure why their number is lower.)

Question: does this mean the total length from the top of the antenna to the BNC connector; i.e. do I include the length (2 inches) of the loading coil too when adjusting the length?

Thanks,
Tom

1490. RE: [pro94owners] Adjusting telescoping antenna

Yahoo group: pro94owners
Date: 2001-12-27 02:53:26 UTC
From: Tim Smith
Topic: 1489 Message: 1490

The constant used in the calcs is different due to the loading coil in the middle. That coil reactively lengthens the antenna to keep the physical length shorter...

Take into consideration the total length including the loading coil from the outer most tip of the antenna to the insulated portion of the BNC. With all things considered it's not that critical.

Experiment a little too...look for wavelength multiples...you may get some gain value at some the higher frequencies.

Good luck!

Tim

Thanks Tim, I didn't realize that.

> Experiment a little too...look for wavelength multiples...you may
>get some gain value at some the higher frequencies.

If I pull out the antenna to its maximum length, it turns out to be almost exactly a 3/8 wavelength, which is about my only option besides 1/4 (which has the part below the loading coil collapsed to one section, and the top four sections pulled out). At least either one is easy to remember so I don't have to carry a ruler around with me :)

So, what specifically are you having a problem with? What kind of
system are you trying to program? Let me know, and I'll do my best
to help.

1497. The pro-93 or pro-94A?

Yahoo group: pro94owners
Date: 2002-01-01 21:23:30 UTC
From: user544
Topic: 1497 Message: 1497

Which is a better deal?
The pro-94A for $150 or the pro-93 for $170 with all the reports of bugs?
I have to return one of these scanners and I don't know which one could anybody experience please help?
Which scanner is a better deal and why? I would like comments of people who have experience with those scanners.

Topic: 1497 Message: 1498

My impression right now is, it's close. The two scanners are fairly close in features except:

93: Control-channel-only programming ability
93: Ten banks of 30 channels
94: 1000 channels (really 500 twice - 10 banks of 50 channels, separtely programmable and usable)
93 Alphanumeric display (on 255 channels of 300, anyway).
94 Automatic display lighting with squelch
93: Computer programmable. This can be a BIG help. I spent over two hours programming frequencies and alpha tags manually on my PRO-93 (the 94 took less time only because it lacks alpha tags). I have yet to try it with a computer.

What's the difference? Control channel operation: I programmed in three different type II systems in one bank with only their control channels (they're far apart geographically). Drove 120 miles and yes, it works, unless you "hilltop" and catch a distant, preceding control channel.

Banks of 30 or 50? I ran out of channels in one bank; 30 wasn't enough for ALL my local PD frequencies. And having two "independent 500 channel scanners" lets you separate services you don't listen to together.

Alphanumeric display? A decided plus, even if I do have to forego it in channels 816 and up.

Automatic illumination? I wish ALL my scanners had that ability.

Computer programming? This can be a BIG help. I spent over two hours programming frequencies and alpha tags manually on my PRO-93 (the 94 took less time only because it lacks alpha tags). I have yet to try it with a computer.

Sensitivity? The 93 MAY be a bit hotter. Can't say for sure. These things differ even from one unit to the next of the SAME type.

Selectivity? Neither is sharp. Both of them respond unpleasantly to a neighboring service 15 Khz away. However, few scanners will stand up to that kind of interference. (But my TH-F6 using NFM is fine.)

Audio? I think my 93 sounds better. You might think differently.

My choice, if I had to choose, would probably be the 93. But
the 94 is a fine scanner that often hangs on my dashboard
(or has!) instead of a PRO-92A.

Maybe you need to ask me in 6 months!

1499. newbie question on programing the scanner

Yahoo group: pro94owners
Date: 2002-01-02 11:58:12 UTC
From: muffyn
Topic: 1499 Message: 1499

when you are programming in trunk & regular 'one' channel
frequencies, can
they all be on the same bank?

I have it set to search the trunks & conventional frequencies,, but am
wondering what is the difference to set it(the group of named trunk
frequencies) up AS a trunk (as the directions inform you to do) when
it
still lists the numbered spots in the bank & you can see them 'wiz'
by...
what would be the difference to just putting them in as REGULAR
conventional
frequencies?

so far I have found only ONE trunked set of 8 stations
(frequencies)....(to
load into it)

(so I have bank 1 ch 1 to 8 as the trunk & the rest as singular)

also WHAT the heck is a "fleet" & group ID lists?
how do you tell, what do you use them for? etc....

1500. RE: [pro94owners] Re: The pro-93 or pro-94A?

From: Tim Smith
Topic: 1497 Message: 1500

My vote is for the 93...the bugs are minor and there are easy work arounds. The audio is definitely better...a "warmer" sound as compared to the hollow sounding 94. I had a 94 and gave it to my dad...he's happy with it but he only needs one trunk bank and a half dozen talkgroups.

Tim

Topic: 1499 Message: 1501

Yes you can have both Trunked and Conventional freq's in the same bank. Follow the directions on entering the Trunked system. Once you are scanning the trunked system, hit "trunk" to stop trunk tracking. Program the conventional freq in one of the channels after the trunked system. Now just hit Trunk to return to scanning your Trunked system, and your conventional freq on the same bank. The only trick to it is that you need to exit trunk mode to directly access your conventional freq's...
As far as the need for using the trunk feature on trunked systems, If you just enter the freqs in, and do a conventional scan, you will miss parts of the conversation. Conventional freq's are based on the idea that all comunication for a group is using the same freq to send and recieve all comunication.
Trunked systems share a pool of frequencies with several diferent "Talk Groups". So if the pd is using talk group 2-024 they can transmit and recieve on any of the frequencies. If you are not trunking you will not know which freq to follow them to. (ex: pd radios on talk group 2-024 to dispatch using freq 855.110, Dispatch responds on talk group 2-024 using freq 855.130) You are probably thinking that you can just scan the channels without using the delay, and you can follow the conversation, but if more than one conversation is going at once you will not be able to do this very well. There are several other reasons including the abillity to know which talk group you are listening to, and the ability to lock out unwanted talk groups such as the dog catcher, and scan only for the talk groups you are looking for.
Thanks,
Wes

1506. Re: [pro94owners] newbie question on programing the scanner

Yahoo group: pro94owners
Date: 2002-01-02 20:18:21 UTC
From: Muffin
Topic: 1499 Message: 1506

thank you for your reply!

I have one more question below (probably more later on {g})

Yes you can have both Trunked and Conventional freq's
in the same bank. Follow the directions on entering
the Trunked system. Once you are scanning the trunked
system, hit "trunk" to stop trunk tracking. Program
the conventional freq in one of the channels after the
trunked system. Now just hit Trunk to return to
scanning your Trunked system, and your conventional
freq on the same bank.
>>>>>>
The only trick to it is that
you need to exit trunk mode to directly access your
conventional freq's...<<<<

now what do you mean by that? when I am scanning & want to go channel by channel ,,, I just hit 'man' to stop it when there is no sound from squelch (then all that shows up on the screen is the bank numbers, & the word 'man' shows up under the channels in the bank) OR I hit scan when there is noise, the word trunk shows in upper left,, HYPER shows up underneath (what is that anyway??)

it steps thru all the channels one by one..
am I doing something wrong

From: lmnorotsky@cs.com
Topic: 1497 Message: 1507

I really like my 94.(Note I didn't say 94A). I like the idea of Alpha tags but how can you beat 1000 channels? Unless you live in Bum F Egypt and the Fire Department still dispatches on 33.90 when the water department isn't using the same freq. When I bought the 94 I thought what was I going to do with 1000 channels? Well, it is really easy to do.

I don't like the time gap the 94A's have when scanning between trunked and conventional. The only way to scan both is to have two scanners. If you think about it, it is not a big deal. There are a lot of good 29-512 scanners out there on the used market real cheap. Think pawn shops and garage sales. Also the worse condition that the case is in, the easier it is to convince the wife that you have had the second radio since before you married her. "Honey look what I found out in the garage!" For most of us the 94 is not our first scanner.

As for me no one is going to get my 94 till they pry it from my cold dead fingers. That is until they make a 1000 channel scanner with auto back light and MILAIR 225-380 MHz.

1508. Fleet Map

Yahoo group: pro94owners
Date: 2002-01-03 00:54:20 UTC
From: W4CN
Topic: 1508 Message: 1508

What is the proper sequence for entering a trunked system into the 94? Obviously the frequencies come first. How can you discover what fleet map to use? If you arbitrarily select the default fleet map then do you search for the various talk groups? Once identified how do you set up the five available slots to optimize your listening time?

Are there any programs that will help identify trunked systems, fleet maps, etc.?

Max

1517. trunk programing help **needed**

Yahoo group: pro94owners
Date: 2002-01-06 01:18:13 UTC
From: muffyn
Topic: 1517 Message: 1517

ok, I am still trying to figure this thing out.

first off can you put more than one TRUNK on a bank?

(if not that is part of my problem)

If so I need HELP!
I have a trunk system that has 4 sites. the frequencys are duplicated in a couple of them. so they definately do not like being on the same bank, since the scanner says it is duplicated.

I see a scan on the display that shows trunk tracking,, but nothing is picked up. it says trunk, shows a few numbers across the top, with a block under one of the numbers that flashes & moves.... is this wrong, correct? when do you hear anything? obviously only one set of frequencys & one base are recognized , the others look like the scanner just says they ae rebular conventional.)

also I have a another list of numbers that are are under this place heading that says it is a trunked system, looking at the explaination (in police call)it says they are EDACS numbers, which I have read you need to be put in , in order , correct? but the list goes from 407.to 409. then to 150. to 173. then back to 409. to 414. etc. what do I do ???

HELPPPPP
& please reply to this group ,as I am unbale to access my home computer for another week.

thanks!!!!

ok, so far I programmed in a trunk site of 12 frequencies in a bank by itself,, also have checked to see if the base & offset are correct. these are Motorola E2-uhf.(yes the M shows up with each freq)

now when I put it on scan,,,,what shoudl happen?
when I see th escreen pop up when I am scanning trunk & conventional channels, it never stops for long,
on the TOP line I see the word LIST with numbers from 1 to 5
the 2nd line with the word trunk are black squares, one before the number 1 & sometimes another black square flashes elsewhere on the same line.
then there is a line with number #1 with dashed lines "-- ---"

when I hit manual scan, the numbers next to the -- lines will go up from 1 to 10 & the numbers at the top will move from 1 to 2 etc & scroll thru all the numbers 1 to 10.

I see the black square moving,, but not a thing happens!!

can someone explain what all those things are on the screen??? (my book does not show it)
& what happens? how do you hear anything?

i DID try to put a couple of these in as conventional channels & I DO sometimes get 'action' from THAT way, so I know that they do work.

HELP

thanks (please post on groups, as I cannot access my home email for a couple weeks)

OK, I'll try to help out. It sounds to me like you don't have any IDs entered into your talk group ID lists. When you press the "TRUNK" button, you enter the trunking mode. Then, if you press the "SCAN" button, the radio starts scanning any talk groups you may have entered into your talk group ID list. However, if you haven't entered any talk groups, then the radio has nothing to scan. My suggestion is that after you press "TRUNK" press the "SRC" button and the radio will follow ANY talk groups using the system. Then, you can store any IDs that pop up into a talk group ID list. The easy way to save a talk group ID is to store it into a temporary monitor memory by pressing the MON/CLR button, then move the talk group ID into a talk group ID list. To do that, press the "MAN" button, select the location where you want to save the ID with the arrow keys, then press "PROG" then "MON/CLR" then "E" and it will save that ID into a list.

Many of the other questions you have are answered in the manual around page 50. Look for information on Talk Group IDs.

1523. Re: trunk display screen *help*

Yahoo group: pro94owners
Date: 2002-01-07 23:44:56 UTC
From: muffyn
Topic: 1520 Message: 1523

thank you for your reply, I think I am gettign the hang of all this,, a lot more to figure out, but each time I get something solved ,, its wonderful!(lol)
Yup, I had NO talk group ID's listed. (I had no idea what they were). the list I got for the trunk groups,, all they listed was system frequencies & had the base & offset listed.

more questions. can you ONLY hold ONE freq in the temporary monitor??(i tried several right after each other ,, but it only showed the last one.) just want to get this straight , if that is correct.
Does it matter WHERE the 'found' group id frequencies are stored?? I did a SRC & it came up with about 10 active ones ,at that time, but they were scattered all over. when I save them into one of the 5 'groups' numbers, can it be anywhere? also when it first picks them up, does it mean anything about what number or where the bar is groing across top ????
can you explain just WHAT the bars blinking mean?

also..... ONE frequency in the group of the TRUNKED site that I have , they have 10 freq ,, & I programmed them all in the order, & it does say M when I save, it,, but when the SEARCH comes up,, it keeps ONE separate & looks at it like a conventional freq. (example,, only bank 10 has this trunk in it of 10 freq,, on a search the trunk screen comes up,, looks at all the little blinking black boxes with the dases under it & THEN pops up this one freq , as if it was a conventional & displays the whole frequency typed on the display,,,, did I explain this correct?? what gives?)
thanks for your help.. I await your answer & off to play with this thing again...

please answer to group,, as I am unable to check home email

1524. RE: [pro94owners] Re: trunk display screen *help*

Yahoo group: pro94owners
Date: 2002-01-08 09:39:20 UTC
From: Glen Tubbesing
Topic: 1520 Message: 1524

more questions. can you ONLY hold ONE freq in the temporary monitor??(i tried several right after each other ,, but it only showed the last one.) just want to get this straight , if that is correct.

Well, you just answered your own question. Apparently not, but I've never tried it. It's much easier and less confusing to just store each talk group one at a time, then save it into the list. That way, you can listen to the one ID for awhile and see if you want to save it in your list.

Does it matter WHERE the 'found' group id frequencies are stored??

Nope. And, they're not frequencies. They're talk group IDs.

I did a SRC & it came up with about 10 active ones ,at that time, but they were scattered all over. when I save them into one of the 5 'groups' numbers, can it be anywhere?

Yep. Just think of each one of the five banks as drawers in a filing cabinet. It doesn't matter where you put the talk group IDs.

also when it first picks them up, does it mean anything about what number or where the bar is
groing across top ????

No. The number across the top of the screen indicates which trunking bank you are monitoring. The blinking bars indicate which channel in that trunked bank is being received out of all the trunking channels you entered when you programmed that bank. I know you're monitoring a Motorola system, but if you were to listen to an EDACS system, you could watch transmissions go from channel 1 to channel 2 to channel 3 to channel 4 and so on. The bar that is on solid and not flashing represents the data channel. Really, Muffyn, if you're hearing transmissions and you're able to follow a conversation on your scanner, then your scanner is working okay.

can you explain just WHAT the bars blinking mean?

They mean that your scanner is working and following a trunked system. Or, see the above paragraph.

also..... ONE frequency in the group of the TRUNKED site that I have , they have 10 freq ,, & I programmed them all in the order, & it does say M when I save, it,, but when the SEARCH comes up,, it keeps ONE separate & looks at it like a conventional freq.

I think you're referring to the data channel. All the trunked systems that the Pro-94 can monitor use a data channel. It's how the radios know what channel the next transmission will be on.

example,, only bank 10 has this trunk in it of 10 freq,, on a search the trunk screen comes up,, looks at all the little blinking black boxes with the dases under it & THEN pops up this one freq , as if it was a conventional & displays the whole frequency typed on the display,,,, did I explain this correct?? what gives?)

Okay, first. when you enter TRUNK mode and press the SRC button, the radio searches through the frequencies you entered when you programmed the trunked system. When it finds the data channel, the scanner "locks" onto that channel and the computer chip in the radio listens to the information being sent. That information tells the computer chip what channels are being used for conversations. After the radio locks onto the data channel, the display should change to show a series of dashes (-------), the channel number for the data channel should flash on the left of the screen along with the bar across the top that corresponds to the channel number, and the word "SEARCH" should show up in the bottom right corner. IF you are seeing a frequency in the display, then that is an indication that the radio cannot find a control channel to lock onto. That could mean one of three things. Either the control channel is too weak for the radio to get a clean copy, or you have not entered in all the frequencies for the system you want to monitor, or the system is not active and is not transmitting.

I'm not sure what you're asking. Are you able to follow a conversation between two people on the system? If so, then you've programmed your scanner correctly. As I said earlier, the solid line represents the data channel. If you were to listen to that channel in conventional mode, you would hear a "chain saw"-type sound. That's the digital data that the trunk system computer sends out to tell all the radios what frequency to use. So, let's say the number "4" pops up on the bottom left of the screen on your radio when you first start monitoring a trunked system. You'll also notice that the fourth black bar from the left should be on solid. That means the data channel is the fourth channel that you have programmed in the trunk bank. Then, if you're in the "SRC" mode, when you hear a transmission, let's say the number has changed to "2". That means that the transmission is on the second channel in your trunk bank. So, since you said you used bank 10 for your trunked bank, in the example above, the data channel would be on channel 454 on your radio, and the first transmission would be on channel 452.

thanks for your help.. I await your answer & off to play with this thing again...

please answer to group,, as I am unable to check home email

Glad to help. By the way, do you have a manual for your scanner? Please, take a few minutes to sit down and read through it carefully. Then, when you are finished, read through it again. Many of the

questions you are asking are answered in the manual.

Good luck and good scanning,

Glen Tubbesing

> Glen Tubbesing

yup I do,, have read it several times,,, but some things are NOT
answered (like my question on saving more than one talk id at a time)
I KNOW that sometimes it seems like "DUHHHHH!" but before most of
us 'newbies' ever opend this book, we had NO idea what the heck a
bank was or anything else!

you 'corrected' me that the talk ID's are NOT called frequencies,,
but tha twas what th enumbers looked like (40 045 etc) (G)

ok NEXT question:
now when I was saving the talk ID's doing a scan , they were just
numbers from 4 to 5 in length. I understand now how to save & program
THOSE in their spots. But I have a list from the trunkedradio.net of
trunks from new Orleans. I have READ the pro-94 book several times &
am lost... It seems to talk english, but,, I dunno (G).
It lists the EDACS Trunk (ok I've only done the motorola,,) so
help?
It lists the SITES of a bunch of numbers. one set has 24 of them.
(there are 3 different sites) the system talk goups are listed below
in DEC, HEX, AFS & has the display & description. how do I enter
these talk groups? also,, there are over 50 of them! they certainly
will not fit in all the 'activity bars" (book says possible maximum
50 frequencies)

or am i mixing something up?
also I am confused in the difference between "talk group ID's"
and "talk group ID lists"

then In New Orleans it has 2 system frequencies trunk groups in the
Motorola type II. I thought,, cool I KNOW how to do this,, BUT>>>>>
it lists the talk groups in weird stuff.. in DEC or HEX! not like the
ones I found in my previous trunk install.(DEC is 16, HEX is 0010)

so NOW what have I missed?

oh, Don't worry I'll evntually run out of questions to bother you with.. :)

thanks > please respond to group as I cannot acess home email

You can get a downcoverter from www.ramseyelectronics.com that will let you convert the frequencies. Scanners cannot be modified to pick up frequencies they weren't designed to receive. Some scanners have certain frequency ranges bypassed and you can restore them with a diode or resistor clip.

I'm trying all this out too. I think the BC245 is about the same circuit board as the PRO-94, so that might be about the only place to get directions from. I haven't found anywhere that tells exactly where the output is. I got mine from the connections that link the two boards inside. I grounded off the shield that is right next to it, and used the second pin up on the left side (screen facing down) for the audio (there are 2 rows with 11 pins each there). The output seems to work well, but now I'm working on the board to see if it works. Try going to http://www.trunkedradio.net/digital/interface.htm to get the plans. I'll be sure to say if mine works later-as soon as I can finish it.

Subject: RE: [pro94owners] Discrimitor Output

most radio shack employees would not know the diff from a BNC connector, and a discriminator.....also the first thing they will tell you is: "you are aware that this will void your warranty"?
Your best bet is right here on this list

Subject: RE: [pro94owners] Discrimitor Output

I'm trying all this out too. I think the BC245 is about the same circuit board as the PRO-94, so that might be about the only place to get directions from. I haven't found anywhere that tells exactly where the output is. I got mine from the connections that link the two boards inside. I grounded off the shield that is right next to it, and used the second pin up on the left side (screen facing down) for the audio (there are 2 rows with 11 pins each there). The output seems to work well, but now I'm working on the board to see if it works. Try going to http://www.trunkedradio.net/digital/interface.htm to get the plans. I'll be sure to say if mine works later-as soon as I can finish it.

Subject: [pro94owners] Discrimitor Output

Hey;

I noticed before there was some talk about the discrimintaor chip output (sorry for spelling). Does anyone have any information on doing this what chip and how to make the "device" for the pro-94. I"m trying to learn what I can.

Thank you for any help
Ben S.

1533. trunk input.. * long range talk group id's*??

Yahoo group: pro94owners
Date: 2002-01-10 17:56:18 UTC
From: muffyn
Topic: 1533 Message: 1533

major question.
CAN you program in the talk id's for a trunk group for an an area where you are not in?? (example,, I am in florida, & trying to program in for New Orleans).

IF NOT, then that answers my big problems lately.

IF so,, then I am doing something wrong..

I am putting in an EDACS system. I have listed the trunk goups in their LCN order. BUT when I try to get it to the spot where it scans/searches it does NOT go into trunk mode (with the 5 channel activity bars etc) it has the frequncys go by , like conventioanl.

In the book,, it says it must grab hold of the DATA channel to do the trunking,,, soooooo is this because I am soooooo far away & it doesnt grab it?

IS there any way to do LONG distance programming of an area(trunk & Id talk groups) before you get there? (yes, I had no trouble with the conventional frequencies ,, or doing a motorola trunk in THIS area while I am here.)

From: brojscox
Topic: 1533 Message: 1536

You "can" program them in even though you're not there. The problem is knowing what they are. You will not be able to search for them as you can not monitor the system from that distance. Your best bet would be to find a source such as Radio Shack's Police Call or an internet source. If you can find them and program them into your scanner you will have them but won't be able to actually use them until you are actually in New Orleans. Once you get there your scanner can pick up the Data channel and monitor the ID's you have programmed in.

Hope this helps
-Jeff

ok I should have made it clear. i DO have all the talk gorup id's, from radio shcak police call, & the trunkedradio.com web site,, so I did double check to make sure I wasnt missinga data channel.

when i TRY to put IN the talk groups, it won't let me! i have read those pages over & over again, no matter what sequence I push them buttons, It will not go into trunk mode so I can pick a channel activity bar (#1 etc) to place it into.. the scanner only stays in scanning the frequencies ,, as if it was in conventional scanning.

any suggestions?????
help
:)

It took me THREE times entering the Kansas City, Missouri, frequencies before it finally started trunking. That's a lot of button presses! I get talk group IDs, and I didn't enter anything in that regard. The only problem right now is that I have about 8 cities entered and have ALL the groups being monitored. I haven't had the time to mess with that or figure it out yet.

I should apologize to you, I answered incorrectly. I just tried it
with my scanner. I took the antenna off so it would not find the data
channel and you are correct. It will not let you get to the talk
group ID lists to program them in. From what I can tell there is NOT
a way to program them in until your scanner picks up the system and
begins to monitor it. I will continue messing with mine and see if I
can figure out a way, but as of yet I have not. Sorry for the
misinformation.

no problem!
thank you for at least trying..
I just wish I didn't have to wait & waste time popping in a whole
bunch of id's when I get there,, but Ill try it,, see if that is
really the problem.

too bad there isnt a FAQ somewhere for silly questions that need to
be explained more, like this one.
dond't ya think the manual should say,, you need to BE in range for
this to work??
arghhhhh .. you don't know how many hours so far Ive spent on trying
to get this thing to work :)

thanks again

1541. Discriminator Output

Yahoo group: pro94owners
Date: 2002-01-11 04:53:01 UTC
From: Mark M
Topic: 1528 Message: 1541

I just made a page for those of y'all interested in seeing
some pictures of where I got the discriminator output from. I have not
finished the two-level digital interface yet, so I can't totally verify
that I got the correct output. (I'm going to have to say don't try this
at home!! (yet) (or unless you are willing to make the same mistakes I
have so far). It looks to be the right one, as I do get audio from it,
but I can't say that it will work with the Trunker or ETrunker programs
yet. Hopefully I'll get it all done over the weekend when I have the
time, and update that page as needed. I also put the schematics and a
diagram that I found on trunkedradio.net. That seems to be the place to
get all your info from.

URL for my page is http://webpages.acs.ttu.edu/mmatalik/Radio
URL for Trunked Radio. Net page (for interfaces) is
http://www.trunkedradio.net/digital/interface.htm
Reasons you would want a Discriminator Output:
http://www.trunkedradio.net/digital.htm

Hope all this helps.
Mark

Hi Muffyn,
I don't know if it'll work with a EDACS system, but what some have done on Motorola systems, is put in a local control channel, then the scanner thinks it's working correctly, and will let you put in the groups you want to monitor. Might try that.

Dick AJ7N in Marysville, WA.

what idd you use to "melt" the pin to the scanner? or did you just poke
a hole with a screwdriver and some filling board and sandpaper (yeah
yeah i know they are bacisly the same thing)
you know it would so much eaiser if they made stuff with it there :p

1544. RE: [pro94owners] Discriminator Output

Yahoo group: pro94owners
Date: 2002-01-11 17:04:55 UTC
From: Mark M
Topic: 1528 Message: 1544

I just used the soldering iron to melt a hole in the scanner. Then, I carved it out a little bit with a knife until the plug fit in. I used a sub-mini plug (2.5 mm) for the connection. I'm sure you could use a drill or something similar to make the hole too. Just make sure you can fit both circuit boards back into the scanner (put the plug right between then-there just enough room there). I put the logic circuit board in, made some mark on the side of the shell with a knife so I could see where it was, then drew a line across from the screw mount (right there by the battery case) to show were the top would be. Then I took all the boards out, and melted it, tried the plug, and cleaned the hole up a little. I put the logic circuit board in, squeezed the plug in (be careful not to scratch anything), then put the RF board on top of that.
And YES, it would be so much easier if they already had a D.O. plug on the scanner, but I guess we could always spend a little more $$$ and buy a Optoelectronics Scanner.

what idd you use to "melt" the pin to the scanner? or did you just poke a hole with a screwdriver and some filling board and sandpaper (yeah yeah i know they are bacisly the same thing)
you know it would so much eaiser if they made stuff with it there :p

Subject: [pro94owners] Discriminator Output

I just made a page for those of y'all interested in seeing some pictures of where I got the discriminator output from. I have not finished the two-level digital interface yet, so I can't totally verify that I got the correct output. (I'm going to have to say don't try this at home!! (yet) (or unless you are willing to make the same mistakes I have so far). It looks to be the right one, as I do get audio from it, but I can't say that it will work with the Trunker or ETrunker programs yet. Hopefully I'll get it all done over the weekend when I have the

time, and update that page as needed. I also put the schematics and a diagram that I found on trunkedradio.net. That seems to be the place to get all your info from.

URL for my page is http://webpages.acs.ttu.edu/mmatalik/Radio
URL for Trunked Radio. Net page (for interfaces) is
http://www.trunkedradio.net/digital/interface.htm
Reasons you would want a Discriminator Output:
http://www.trunkedradio.net/digital.htm

Hope all this helps.
Mark

1545. Re: Discriminator Output

Yahoo group: pro94owners
Date: 2002-01-11 17:17:36 UTC
From: brojscox
Topic: 1528 Message: 1545

Just to make sure I understand this correctly. In order to use the data slicer you would have to set your scanner to conventional mode and hold it on the data channel, thus the reason behind the two scanner setup mentioned.

If that is the case, then what about the following thought. It seems that the scanner when in trunking mode has to have two RF recievers. One for the data channel and one for the corresponding voice channel. If that is the case, would it be possible to tap into the data channel circuit (maybe on the logic board?) and then allow the scanner to function in normal trunk mode and not require two scanners. Or does the scanner simply have one RF reciever and as soon as the voice transmission ends immediately switch back to the data channel to find what voice channel to look at next.

Just wondering how feasible this idea is. I am new to trunk-scanning and just trying to get a better understanding of the "behind the scenes" stuff as I consider building the data slicer.

No it only has one receiver, as do the trunked radio's..
The 94 will monitor the control channel then when it sees something to
listen to it will tune to the required voice frequency, at the end of
the over/conversation it will tune back to the control channel..

Yes, the PRO-94 will trunk (as it is programmed to). The reason for the discriminator output is to decode the data channel of the trunked system. Using this, you can see the individual radio IDs and if you do not know the Fleet map of a type I system, you can figure it out through this too. Trunked radios (in the mobile and portable units) do only have one receiver, but dispatch has quite a set-up usually. They can see the radio IDs as soon as they key up. I'm guessing the reason for this is for checking unauthorized use (if you could really find a radio programmed or program it yourself-not an easy thing to do), and seeing who is talking (if they don't ID themselves), and to know who pushed the "Emergency" button on their radio when it goes off. If you are just interested in listening to the voice traffic, then there is no need for you to tap the output or do any mods to you scanner at all. It works great for trunking (except for LTR). Using this output and interface, there is other software to decode weather satellite info and other (probably illegal) data. It you have an old scanner that did not trunk, then you can use this discriminator output, software, and another scanner (making two scanners that are not trunk track capable), and follow a trunked voice communication. I don't think this is for the average scanning enthusiast. Most people just like to hear what is going on, not who is talking, how the systems work and the such.
Hope this clears up the question whether or not you really want (need) to do this.
Mark

Yahoo group: pro94owners
Date: 2002-01-11 19:49:00 UTC
From: brojscox
Topic: 1528 Message: 1548

I am planning to build the interface unit in order to better understand the makeup of the system I monitor. My only point was that I was trying to find a way to be able to listen to the system and decode the data channel simultaneously with only one scanner. My wife would have a cow if I told her I was going to purchase another scanner so I can take the first one apart and hook it to my computer. I am going to do it just for a project (I can build the interface no problem) to better understand the system. I'll just have to do without the voice while I am decoding the data channel. Thanks for your input.

Quick question on your picture.

The pin you describe is the 2nd from the bottom on the left. The pin you have labeled for "audio data" is the 2nd from the top on the left. Is this a typo, a mistake on my part, or did you just label a different pin other than the discriminator tap?

1550. RE: [pro94owners] Re: trunk input.. * long range talk group id's*??

From: Glen Tubbesing
Topic: 1533 Message: 1550

There's a way to do this. The trick is to make the radio "think" it's receiving a signal from that system. How do you do that? Just enter in all the frequencies from the distant system. Then, add one more frequency. a data channel from a local system of the same type, i.e. Motorola Type 1 or 2, or EDACS. Then, the radio will lock onto that control channel and you can enter in your talk group IDs.

Subject: [pro94owners] Re: trunk input.. * long range talk group id's*??

I should apologize to you, I answered incorrectly. I just tried it with my scanner. I took the antenna off so it would not find the data channel and you are correct. It will not let you get to the talk group ID lists to program them in. From what I can tell there is NOT a way to program them in until your scanner picks up the system and begins to monitor it. I will continue messing with mine and see if I can figure out a way, but as of yet I have not. Sorry for the misinformation.

Yeah, my bad on the picture. I labeled the wrong one. :-(The text there even says it right. I was just thinking on the other side of the circuit board when I made the pic. It's easier to solder a point on the other side of that connector, but be sure it is the left, 2nd from the bottom (when the screen is away from you).

From: user544
Topic: 1552 Message: 1552

How does the reception of the pro-94a compare to other scanners such as the pro-93 and pro-92? How does the pro-94a compare to those scanners in general? Which scanner would you buy?

1553. help me get this straight, thanks

Yahoo group: pro94owners
Date: 2002-01-12 15:21:08 UTC
From: TTPrescott
Topic: 1553 Message: 1553

I've read the book many times and I've also read the many posts on this board. Is it possible to just enter the control channel and still pick up the many talk groups??? I'm inclined to say no but I'm obviously not sure.

Also, what is everyone doing about their antenna situation. I have a base AS (not a discone) and am now wondering if I need to upgrade it??? What about splitting the antenna using a "T" to feed 2 different scanners, bad idea or what? So much info. that is new pertaining to trunking...I had the conventional scanning down pat.

Thanks
GM

Pro92 receiver is more sensitve and more selective than Pro94 or Pro91.

Otherwise, it's like comparing apples and oranges. The Pro92 takes an entirely different approach to the difference between conventional and trunking. I suggest you download the manuals from RS website and read each carefully to decide which approach you like. Contrary to rumors, the manuals offer an excellent description of each unit. The Pro94 and Pro91 are Uniden scanners. The Pro92 is built by GRE America, Inc. Take a look at http://oem.greamerica.com/odm.html for more information about these folks.

No, the PRO-94 will NOT do Control Channel only trunking. I'm pretty sure the 94a will not either (I don't have that one, so that's why I'm not totally sure). AS far as I know, the only scanner out there now that will do that is the Bearcat 780, and the control channel only works for Motorola systems only.
As for the antenna, you might try a amplifier. I've never used one, but I would think that they would work ok. Do you know how far way the system(s) you are trying to listen to are? As an alternative (probably will work better), try getting your antenna higher. I realize this isn't possible for a lot of people, but let me tell you what an improvement 50' will do for you. From my 60' antenna I can listen to any trunked system within about a 50 to 100 mile radius (depends on which way, system power, and "voice clarity" that I want). Conventional systems are received well from there too. I have heard several that are probably 200 miles away (it was at night, so conditions were favorable for that kind of thing). I would say that height would be a great way to improve it, but it the system is close, try a different antenna or an amp. It all depends on what you are trying to do exactly.

1556. New Scanners in the Works

Yahoo group: pro94owners
Date: 2002-01-12 22:38:46 UTC
From: Dave Reingold
Topic: 1533 Message: 1556

Here is the latest information about scanners we should see sometime this later year.

Uniden Unveils P-25 Scanners at Electronics Show

Don Bishop, editorial director

Mobile Radio Technology magazine, www.mrtmag.com, Online Exclusive, Jan 7, 2002, 12:00 a.m. ET

Uniden Corporation of America Fort Worth, TX, is set to release some details about its plans to offer scanners capable of monitoring radio communications signals that use APCO Project 25 digital technology. Company representatives are scheduled to showcase the products tomorrow at the Consumer Electronics Show in Las Vegas.

Our retailers have been pushing us for a Uniden APCO 25 product for months, and our new BC250D hand-held and our BC785D base-and-mobile scanning unit represent the fulfillment of our promise. With the ability to monitor conventional, trunked and APCO 25 conventional and trunked systems these models are state-of-the-art radio scanners, Uniden Product Manager Scott Carpenter said.

According to Uniden representatives, the Bearcat BC250D and the Bearcat BC785D models would reach dealer shelves in late 2002. The products are designed to offer 1,100 channels, 10 banks and a frequency range of 25MHzñ1300MHz.

The new hand-held offers all of the features of Uniden's current BC780 XLT in a portable model, along with APCO 25 capability and an additional 600 channels. Users of both models would have to purchase an APCO 25 card, the BCi25D, separately, to activate the APCO 25 monitoring feature.

We're pleased to be bringing these great Bearcat APCO 25 units to market," Carpenter said. "We expect more big cities to migrate to the APCO 25 digital technology, like Los Angeles did this past year, to ensure agency interoperability among police, fire, EMTs and the like. We know news organizations, businesses and consumers will want to monitor their signals."

Uniden officials stressed that APCO 25 digital scanning technology simply gives users the ability to monitor the day-to-day activities and signals of standard city and government service departments, but in no way allows users to monitor encrypted signals from national and local security organizations.

Uniden also is set to reveal plans tomorrow to market its own scanner programming software, which it is demonstrating in its booth at CES. The software will allow the users of all Uniden scanners with data ports to

program frequencies into scanner channels and banks.

1557. tell me the difference

Yahoo group: pro94owners
Date: 2002-01-13 05:46:35 UTC
From: TTPrescott
Topic: 1557 Message: 1557

I'm looking at ebay to see if I can pick up another hand held fairly cheap...can someone summarize the differences between the RS pro-92, pro-93 and pro-94...just trying to make an educated decision based on my area and scanning habits. I'm interested in scanning conventional and trunked systems simultaneously. Another option would be to have 2 scanners, 1 for conventional and one for trunking...you see where I'm going with this? Hopefully.

Anyway, doesn't anyone on the web compare all of these scanners (and maybe even Uniden's radios) via some sort of matrix or spread sheet? Seems to me it would be a very useful tool for prospective buyers.

Email me direct or post on this board. Thanks.
Glen

Topic: 1557 Message: 1559

If you want to scan many agencies at once, having only one scanner limits what you can hear. Not because the scanner can't hear them, but because you are listening to one agency while something's going on with another. The limit to using multiple scanners is how much overload your brain can handle!

The Pro92 (with no letter after the number) originally used a trunking method of reading the subaudible tone sent on each frequency in a trunked system. This proved unsatisfactory to many users and the software was changed to trunk using the control channel on all "lettered" -- A and B version -- Pro92's. However, the original method allows scanning talk groups marked private, which the control channel method will not do. The Pro92 needs all frequencies in a system to work properly. I'm not sure, but I believe the first 92's out could not trunk and scan conventional systems at the same time. All newer trunk scanners can.

The 92 does CTCSS (in closed mode) on conventional systems and will display CTCSS while scanning in open mode, with no delay to search for it. 92's are made by GRE. Uses a pack of 6 AA's or a prorietary RS NiCd pack. Two AA holders are available, a black one for alkalines, and a yellow one that allows batteries to charge in the radio. Takes -9 VDC.

The Pro94 (Uniden made) used control channel trunking from the beginning. You still have to enter all the channels in a system. 94's cannot detect or use CTCSS. Uses four AA's which clip into the scanner. An internal switch (alkaline/nicad) selects the ability to charge batteries installed in the radio. Takes -9 VDC.

The Pro93 is another GRE. It uses control channel trunking, and does not require all channels be entered for Motorola systems. The manual seems to suggest it wil work with only the control channel on Motorola type I, II and IIi systems. I can testify that works on II and IIi. It is unable to use CTCSS. Uses 4 AA's; two AA holders are available, black, and a yellow one that allows batteries to charge in the radio. Takes +9 VDC.

The Pro92 has 500 channels in the banks of 50. It can do alphabetic labels for each channel. The 94 is arranged as two sets (you can use only one at a time) of 500, in ten banks of 50 each. It has no alpha tag ability. The Pro93 has 300 channels in ten banks of 30, and does alpha tags.

This is a sketchy description of each radio and necessarily
incomplete. I recommend you check out the Strong Signals site !

Thanks for all of the good info. As I dig into the particulars of each radio I'm finding that the best of all worlds can't be had (the closest I'm finding is the Uniden 780).

I feel that that I need the ctcss option (lining in the Providence, RI area is pretty congested and my Pro-94 picks up losts of "junk") and would like a scanner that does trunking and conventional at the same time.

Any feeling on the Uniden 245xlt? Also seems to be a decent radio?!.

Still shopping.

I have a pro-94 scanner and I have been trying to listen to Los Angeles Housing Authority's frequency, unfortunately I do not have the exact frequency. all I know is that they are using the trunk mode, and that they are in group 288 and 289. I do not how to convert that into a frequency. I have done a lot of research, but I'm still unable to listen to anything in the trunk channels. Can anyone assist me?

Check out http://www.trunkedradio.net/ for frequencies. According to this web page, this is a 21 channel Wide Area EDACS system. Don't forget to enter the frequencies in LCN order starting with 1.

From: Chris Pohlad-Thomas
Topic: 1564 Message: 1564

I was wondering what techniques you all used for this SAME weather stuff. I had read somewhere that you could make it a Priority channel and then when you were scanning other ones, if an alert came through it would jump to that channel. Any ideas on how to do this? does this mean that i need to be scanning a bank that has that frequency in it, or what? Chris

I think it's a trade off to get longer battery life, all of the hand held's
that I have owned have been that way.

I have used amplified speakers that were intended to be used with small
pocket radios (Walkman and etc.) for indoor use and one of those adapters
made to run the Walkman type radios through the tape player in a car to get
a more comfortable level of sound from my hand held's.

I went to Rat Shack and picked up a pair of computer speakers for $9.95. I don't know what model they are but every time I've seen them in the store they have been yellow. They don't require any batteries and just plug into the headphone jack on the Pro-94.

Only one of the speakers will have sound so just listen to them and use a pair of scissors to clip the non-working speaker off. It belts out the sound with very little distortion.

I can't think of a better and easier fix for the stock speaker on the Pro-94.

The problem is that the 94 only has four AA batteries which is not enough
power to drive a larger audio output without zapping batteries faster than
you could put them in.

It will be like the difference between night and day. I have bought several sets over the last year (can't stand too many at one time due to $). They have several sizes on the rack and all of them are much better than the NiCads but the 1600 mAh ones will really make a big difference. I have also put them in my camera motor drives and flashes but have not taken enough pictures since I put them there to tell how well they will stand up there but suspect they will do well there also.

RM ~~

PS, If you find any that are less than 1600mAh have them scanned for price, they should be listed at a close out price. Look for a bubble pack that has 4 batteries (I think they are 1200 mAh) and a charger. I bought several of them for less than $10.00 ea. just before Christmas.

I would like to invite all of you to join my new Yahoo Scanner News Story Group.http://groups.yahoo.com/group/Scanner_News_Stories/

This group allows people from across the U.S. & Canada to post interesting news articles from Radio, Print, or TV Media that represent some part of the Scanner Hobby.

You will see what I mean by the first posting that was made.

I think this can be a very interesting group with the amount of activity that goes on throught both Countries.

Sorry for cross posting through many of the groups, but with a group like this, I wanted to try and reach out to as many people as possible that are interested in the scanner hobby.

So please don't flame any of the groups for this posting. Thanks for your understanding.

Here's a good tip....in the car, I run my Pro-94 through the car cassette player. I use a stereo to mono sub-mini plug in the
headphone outpit jack connected to a cassette/CD player adapter. Audio is delivered to all six speakers.
Jrobmills@... wrote: In a message dated 01/16/2002 7:57:23 AM Central Standard Time, banderso@... writes:

<< Has anyone tried an internal speaker mod to correct this problem? >>

The problem is that the 94 only has four AA batteries which is not enough
power to drive a larger audio output without zapping batteries faster than
you could put them in.

OK, thanks for all of the good info on the NiMH batteries. It seems as though this will work out good for me.
Another question: Will leaving the scanner plugged into the AC power supply with the NiMH's installed damage them after they have been fully charged? Normally, I listen here at home and when I go into town I unplug the scanner and take it with me. Will this on-again/off-again cycle hurt the batteries?

Thanks,
Gary

It has not hurt mine. I keep the Pro 94 plugged in all the time except
when I leave. BTW: NIMH's don't have the so called 'memory' problem of
regular ni-cads. Just make sure the little switch inside is set to
ni-cad and not alkaline. I like the NiMH's so well I have gotten more
for other radios and my portable CD player. Good luck.

NiMH are much more sensitive to damage from overcharge than NiCd,
according to published documentation. Unless the 94 has sophisticated
charge management buit in (and no one has provided a definitive answer
to this question), I would not risk it.

I've had a very similar experience with Rayovac Ultra NiMH batteries available at Wal-Mart. They are somewhere very close to $2.50 a piece when you buy a 4-pack (total $10), and without having to pay shipping, they are about the cheapest I've found, and you can have them right away. From my experience, they out-perform the RS NiMH batteries I also own and purchased one day earlier. I switch between the two sets, and the Rayovacs consistantly last longer.

Food for thought...

Radio Shack has both, the 1500 and the 1600's and both are green in color.

Check the prices from this web site www.cheapbatteries.com/nimh.htm
I have not ordered from them but intend to order my next ones from them. I
notice that they have the AA's up to 1800 mAh.

Rayovac has a fast charger (Model PS4) that is FAST!! 1 hour or less
with individual charging circuits for each cell. I bought mine at
WalMart for around $30 and it includes 2 NiMH 1600mah AA's. It
includes a wall wart, output 12VDC @ 1.5A, so I'm sure that you can
use an adapter from the cig. lighter to the charger with the right
adapter plug. I like it because I also use it to charge 3 AA's for my
Mot. FRS radios. There is no other practical way to charge 3 at a
time.

NiMH are much more sensitive to damage from overcharge than NiCd,
according to published documentation. Unless the 94 has sophisticated
charge management buit in (and no one has provided a definitive answer
to this question), I would not risk it.

Assuming that intelligent charge management is not present, you can get a ballpark figure by dividing the capacity (in milliamp-hours) of the cell by the charge current and adding a couple of hours to allow for inefficiencies. That's assuming the batteries are fully discharged.

There are also voltage measurement techniques that you can use, that are well documented on some of the battery manufacturer's web sites.

I get severe humming when I pick up the local police on 453.3 MHz, and have also noticed the hissing you described. The humming is almost like that TV buzzing you get when there's no audio on a program. It's not there on my PRO-51 or PRO-2004, sso I'm assuming it's a technical problem in the PRO-49/a.

>this hiss? Also is there a way to make or by an mobile antenna for >the
>155.000 freg range? I travel alot and want to hear the R.C.M.P.

I use the RadioShack magnetic mount, the all-band antenna with two loading coils. I can get six or seven of the National Weather Service broadcasts using that antenna. I'm very pleased with it.

I have also noticed this and, judging fronm the archive in this group, so have many others. Radio Shack's extension lapel speaker has been suggested as a cure and I'm pretty pleased with it. This suggests that the internal speaker of the Pro94 is far too efficient at reproducing high frequencies. Other external speakers also work great. The audio from this scanner can be pretty terrific with an external; it's too bad they were so lax when they picked the speaker that made it into production.

If you want a dedicated antenna for 155 MHz, contact a 2 way commercial radio shop and they'll fix you up. I am quite pleased with the band-specific portable antennas I get this way.

1601. using SAME on the radio

Yahoo group: pro94owners
Date: 2002-01-28 13:49:26 UTC
From: Chris Pohlad-Thomas
Topic: 1601 Message: 1601

I was wondering if anyone had any tips for using the SAME feature on our radio. I had heard some people say that they could put it as a priority channel and then if it got a signal it would flip back to it, but what i would like to do is have it so if something came in as an alert it would flip to that channel.
Chris

Radio Shack makes a magnetic base scanner ant. I have made a couple of my own using a magnetic mobile phone ant. and putting on a BNC connector on the end. They work very well on my 94.

Subject: [pro94owners] Back ground Hiss

Hello, i have a Pro94a and noticed that any time i pick something up, even if its real close/clear, there is alot of back ground hiss. When i trunk the local police they come in with a strong signal but there is a hiss also. Sometimes if i put my hand part way infront of the speakerand the is less noticable. Ive used 2 antenna, the orginal ducky and a Radioshack 20-006 and both have this hiss in the back ground. Would an atenna for just the freq i want to hear get rid of this hiss? Also is there a way to make or by an mobile antenna for the 155.000 freg range? I travel alot and want to hear the R.C.M.P. thanks alot

Hi I am curious about the supposed MOD for cellular band, if you have any info on that. I tried one site but can't get in?
Then another site said the Pro 94 could not be modified, but they went to the trouble of screen printing a not to messages so I am curious? Is this just a adjustment or do you have to add components etc??

There are no mods for a Pro-94. Now, you may buy a frequency downconverter (or whatever it's called). but the Cellphone bands are boring anyways.

You'll hear a lot of grocery lists and parents telling their kids to meet them after school.
Even then the old analoge cellphones are used less and less frequently.

You'll be unlikely to pick up your neighbors Nokia on your scanner.

Hi Jay,
I ran a search under Yahoo "Pro-94" and in the first page of hits it has a site with cellular Mods for the Pro-94, but I can't get in that site.
I got another e-mail saying the cellular band is only the older analog phones so that not much use to me.
Any way thanks for the feedback.

You will, but you'll only get half of the conversation, and even then only for a brief amount of time.
I think alot of the newer phones work duplex frequencies (transmit on one, recieve on another), and they rotate these frequencies frequently.

However, cell phones are not my field, so I'll have to defer the topic to someone that has more knowladge them myself. Though, the conversations are going to be just as boring, Not to mention illegal.

1613. Pro94 Battery Charging

Yahoo group: pro94owners
Date: 2002-01-31 03:12:25 UTC
From: Jim Shorney
Topic: 1612 Message: 1613

-----BEGIN PGP SIGNED MESSAGE-----

Since no one seems to have a definitive answer about this, I decided to do a test as follows:

Test Setup

A set of 1100 mAH NiMH batteries was discharged in the scanner until they would no longer power the scanner for more than a few seconds. I then placed the scanner on charge (regulated 9 volts) with a Fluke 8050A DMM connected in series for current measurement.

Results

The scanner, when turned off with no batteries, draws 2.1 mA. This can be considered insignifigant for the purpose of this test. Upon initial application of charging voltage, the charge current was 200 mA, decreasing rapidly to around 120 mA after a few minutes. Current stabilised at about 100 mA after 30 minutes. After 12 hours, current was at 75 mA, and remained at that level until charging voltage was removed at 20 hours.

Conclusion

The Pro94 does not have intelligent charge management, nor does it have timed charge termination. The nominal charge current of 100 mA seems to be geared towards the 14-hour rate (.1C) for 1000 to 1100 mAh cells. 1100 mAh cells should be fully charged after 15-16 hours, while 'standard' 450 mAh NiCd cells should be fully charged in about 7 hours. Higher capacity cells would take proportionally longer to charge. Since no intelligent charge management is used, care should be taken not to overcharge NiMH cells. NiCD cells can withstand overcharge for a short time, but should not be left on charge continuously.

For some very good information on battery chemistry, charge management, and problems and pitfalls, please visit this web site:

http://www.cadex.com/gen_default.asp

I have no connection with this company, I just found the information they provide very useful.

Cellular phone users are migrating to digital, digital (1500MHz area and Gigahertz area I think, and in digital mode) is were it is going. It is not very interesting to listen to conversations, they are boring. You can only here one side of the call in most cases. Its a waste of time and impractical to do. 5-10 Years ago there would have been much more activity on Cellular F-s, its a waste of time to spend the money and effort to attempt to illegaly monitor cellular phones. Most phone companies hand out digital or digital/analog phones like candy now.

Boring? Probably. Illegal? So what.

The fact that it is illegal makes it all that more appealing (to some). People get hacked software off the internet, they steal cable with pirate boxes, they steal satellite TV with copied cards. People love getting what they're told they can't have (like those Cuban cigars I got in Mexico). They know its boring and illegal but finding a way around the system is so much fun, it's something you can do but your neighbor can't.... ...bragging rights etc.

I disagree with your attitude except on a couple of points, and agree on others. Now, remember, this is -my opinion-, please take it tiwht a couple of salt shakers. And no, I'm not trying to discound your opinion.

First of all, It's stupid, and boring. It'll be novilty for a week then that's it.
If you really want to listen, get an in-line frequency downconverter and begone.

Myself, I am activly trying to Modify my scanner. Why? not so I can listen to some redneck talk to his third sixteen year old girlfriend whom he just got pregnant again..
I'm trying to modify it because of the technical challenge. I agree, people like to do what they're told they can't. I'm told there is no mods for the Pro-94 because of this 7 byte 'password'. What if I can get around it, dump the rom and program my own? There's the challenge. There's where skill, intelligence and technical ability merge into the ability to say "I am smarter then those that would consider me stupid. I have done what they specifically tried to prevent me from doing".

Those that download cracked software off the internet are nothing but consumers looking for freebies. It's the people that -do- the cracking that deserve respect and bragging rights. Those that use their knowladge and abilities to build cable boxes and social engineering to get a card and then learn how to program it. Those are the ones that do it for fun. The people that buy a box off of ebay and just gain weight infront of a television all day for a measly $250 investment. They don't deserve respect nor 'bragging rights'. It's just another level of mindless consumerisim.

I personally could care less about cell phone monitoring (I have a 2006 that has never been modified that I bought new) but I do resent the law that tells me that I can't monitor a radio frequency. The old law (as it should be) stated that you could monitor anything out there but it was illegal to divulge what you heard to another party.

Yeah. It's alot like if it were illegal to listen to another person's conversation in a crowded Cafe.

Though, isn't that "do not divulge" law still in effect?
Or has it became residual social protocol and ethic now?

I disagree with your attitude except on a couple of points, and agree on others. Now, remember, this is -my opinion-, please take it tiwht a couple of salt shakers. And no, I'm not trying to discound your opinion.

First of all, It's stupid, and boring. It'll be novilty for a week then that's it.
If you really want to listen, get an in-line frequency downconverter and begone.

Myself, I am activly trying to Modify my scanner. Why? not so I can listen to some redneck talk to his third sixteen year old girlfriend whom he just got pregnant again..
I'm trying to modify it because of the technical challenge. I agree, people like to do what they're told they can't. I'm told there is no mods for the Pro-94 because of this 7 byte 'password'. What if I can get around it, dump the rom and program my own? There's the challenge. There's where skill, intelligence and technical ability merge into the ability to say "I am smarter then those that would consider me stupid. I have done what they specifically tried to prevent me from doing".

Those that download cracked software off the internet are nothing but consumers looking for freebies. It's the people that -do- the cracking that deserve respect and bragging rights. Those that use their knowladge and abilities to build cable boxes and social engineering to get a card and then learn how to program it. Those are the ones that do it for fun. The people that buy a box off of ebay and just gain weight infront of a television all day for a measly $250 investment. They don't deserve respect nor 'bragging rights'. It's just another level of mindless consumerisim.

[Jay M/Thu, Jan 31, 2002 at 11:36:34PM -0500]
>Boring? Probably. Illegal? So what.
>
>The fact that it is illegal makes it all that more appealing (to some). People get hacked software off the internet, they steal cable with pirate boxes, they steal satellite TV with copied cards. People love getting what they're told they can't have (like those Cuban cigars I got in Mexico). They know its boring and illegal but finding a way around the system is so much fun, it's something you can do but your neighbor can't.... ...bragging rights etc.

I was under the impression that you could do the mods (if they are possible) but it was illegal to listen to cellular (whoops). It's like the speed limit. For years and years it was 55 mph, but the police would let you get away with 60-65 most of the time, and now all of a sudden it's not 55 any more. Most laws are unconstitutional and just the result of a couple of guys sitting around and one of them says, "You know Bill, I don't much like them doing that. Let's get a law passed agin it." In fact most "laws" aren't laws at all, but rather rules/regulations made by a bureaucrat. Go to a law library and check the some 4,000,000 pages of laws in the United States. Then tell me that you and I and everyone else aren't breaking thousands of those "laws" every day and right this minute.

Wow. It must be slow in your (red)neck of the woods. Back before it became illegal, I heard at least three or four robberies being planned, numerous drug deals, call girls and one girl talking dirty to her boyfriend while she drove at 85 mph during a driving rain. Yeah, most of it was boring, but then so are most police/fire/ambulance calls.

1627. where do the trunk id's hide??

Yahoo group: pro94owners
Date: 2002-02-01 23:37:47 UTC
From: Muffin
Topic: 1627 Message: 1627

Ok, the topic is kind of comfusing.
what I'd like to know is AFTER you enter a trunk system & then enter the talk ID"s where are they??
I can still SEE the trunk frequencies listed by channel number,, but I know I entered over 20+ talk id's. where do they hide??? how can you find them again to tell WHICH ones you ahve entered?
Do they take up SPOTS where other non trunk frequencies are entered?(these are easy to find also,, by number) how will you be able to tell how many spots you have left?

major problem is,, that many of the trunks I have entered are in other states, & you only ""trunk"" when in that area....

any explaination is greatly appreciated.

1630. which one to buy?

Yahoo group: pro94owners
Date: 2002-02-02 16:56:27 UTC
From: worksntv@aol.com
Topic: 1630 Message: 1630

I'd like to hear from members of this group concerning the pros/cons based on personal experience between the pro 94/pro 92 and the Bc 895 handhelds.

It's time to upgrade what I have, a Bc 3000xlt, and the best part of it my employer, a TV station, is footing the bill!

Bob

1631. RE: [pro94owners] which one to buy?

Yahoo group: pro94owners
Date: 2002-02-02 19:58:31 UTC
From: Mark M
Topic: 1630 Message: 1631

Whichever scanner you buy should all depend on what your
needs are. If you are looking for a handheld, the 92 and 94 are nice. If
you want a BUNCH of channels (1000, but "only" 500 are scan-able at one
time) , the 94 is for you. The Pro-94 does not do LTR Trunking. If you
want text display (but half the channels) then the 92 is for you. I've
heard that the 92 is not as sensitive as the 94, but if you put an
external antenna on, and are within whatever city you are listening to,
then that shouldn't be much problem. I believe the 92 is also computer
programmable, but I have never seen that done either. The bc-245 is the
handheld version of the bc 895, if you are looking for a handheld. I
personally have never touched a BC 895, I would much rather have the BC
780 xlt for my mobile/desktop. I have that scanner now, and it just
blows everything else away. Text display, 500 channels, and Motorola,
Edacs, and LTR trunking. But that is only if you want a mobile/dektop
(and it does cost just a bit more than the 94, 92 or 895.

Overall, I'd say depending on where you are and what kind of
stuff (and how much stuff) you are listening to is what will be the
deciding factor. Maybe if you reply and give an area that you are in,
someone in that area may have frequencies and types of trunked systems
you may be interested in, and may be able to help you with what they
have.

Hope this helped a little.

That's completely a valid wish and perfectly resonable to want for.

However, it's how this is obtained that becomes the problem and the subject for debate.

Would you feel more secure with a spread-spectrum gigahertz phone with some form of encryption and no laws against people listening to the frequencies...
Or an unencrypted standard phone that transmits and recieves on open airwaves, and a law making it illegal to listen to those specific frequencies.

The second sounds pretty shakey and untrustworthy, right?
Unfortunately that's exactly what we have, as stupid as it may be.

My Advice: Buy a good phone. Because the "law" will not stop someone from listening, no matter how strictly it's enforced. As long as your voice is out there on the airwaves, there's a chance someone will pick it up and listen to it.

Yeah. It's alot like if it were illegal to listen to another person's conversation in a crowded Cafe.

Though, isn't that "do not divulge" law still in effect?
Or has it became residual social protocol and ethic now?

1638. 900 Spectrum Spread- vs-900 Analog Phones

Yahoo group: pro94owners
Date: 2002-02-04 05:35:01 UTC
From: harryp10_2000
Topic: 1638 Message: 1638

The 900 Analog phones that all retailers sell for "Dirt Cheap" are just that.The Pro94 can pick-up(some brand names)of these calls with-in a 3 block range(which is againist the Law to listen in on a conversation).
The Spectrum Spread can not be picked up by the Pro94(It use DSS) which is a digital signal.I know from experience.So I own a Spectrum Spread for my portable phone and have heard of alarm codes and S.S.#'s given over the Analogs.There are millions of these Analog 900's in use each day.Anyone with a scanner that can scan the 900MHz range can pick-up anything you say on these phones if they are close enough to where they are(being)transmitting from.So do your self(and your Kin)a favor and tell them either to buy a 900 Spectrum Spread Phone or do there talking on a "Land Line" for peace of mind!
If you own one of these(900 analogs)and a Pro94 you can see the effect if you scan the 900MHz range.If you trun on your phone and then hear the dial tone on your scanner,well there you go.So can everyone else!

Subject: [pro94owners] which one to buy?
Date: Sat, 2 Feb 2002 11:56:27 EST

I'd like to hear from members of this group concerning the pros/cons based on
personal experience between the pro 94/pro 92 and the Bc 895 handhelds.

It's time to upgrade what I have, a Bc 3000xlt, and the best part of it my employer, a TV station, is footing the bill!

>Spread for my portable phone

I bought a Courier DSS phone precisely because I know that people have scanners. (Aside: I once heard a GE-MARC V salesperson flat out lie to a prospective client that the mobile phone service was secure. After I demonstrated to her that the calls could be monitored on our shop service monitor or a scanner, she _still insisted they were secure). The scanner doesn't even know when the phone is up, there isn't even a detectable increase in the noise floor; I had to look at it on my spectrum analyzer to convince myself that the signal was really there. The only downside is now I can't monitor phone calls from my own house on my scanners.... :-)

Lets not "clog" up the postings in the "Pro-94" group with chat about what type of telephone to buy. Start another club. Stick to the topic.
Delphinios <bl00@...> wrote: That's completely a valid wish and perfectly resonable to want for.

However, it's how this is obtained that becomes the problem and the subject for debate.

Would you feel more secure with a spread-spectrum gigahertz phone with some form of encryption and no laws against people listening to the frequencies...
Or an unencrypted standard phone that transmits and recieves on open airwaves, and a law making it illegal to listen to those specific frequencies.

The second sounds pretty shakey and untrustworthy, right?
Unfortunately that's exactly what we have, as stupid as it may be.

My Advice: Buy a good phone. Because the "law" will not stop someone from listening, no matter how strictly it's enforced. As long as your voice is out there on the airwaves, there's a chance someone will pick it up and listen to it.

Jeff,

I have asked the same question numerous times, only to get no responces whatsoever. Either there is no way it can be done, or no-one wants to take time to answer. Either way, mine still beeps too. I don't even listen to it anymore.

Why let them run down all the way? It is because of the so called
'memory' problems with regular ni-cads? If so just get some NiMH
batteries that don't have the memory problem. And I have heard the
various reasons and excuses about NIMH batteries. The PRO-94 manual
states that these can be used. I bought some and they work fine. I keep
my scanner plugged in 24/7 and have never had any problems with it. (Nor
have I had any problems with portable scanners plugged in 24/7 which I
have done for many, many years. No horror stories here.) It works.

From: Delphinios
Topic: 48 Message: 1644

Respectful Suggestion: Read my post. It's quite on-topic as it has a lot to do directly with scanning in general. Considering that a pro-94 can listen to analog cordless phones with no modifications, I'd say this is a pretty important topic. Something the public (and especially other scaner users) should be aware of.

Second, I believe it's up to the moderator to decide if something's off-topic or not.

And battery manufacturers love people like you. I am sure you have never had any problems, but you will also not get the maximum number of charge/discharge cycles from your batteries before they need replacement. Notebook computer batteries are the worst in this respect, because computer users rarely practice good battery management techniques. The documentation is there, from virtually every major battery manufacturer. I have to replace the battery in my cordless phone about once a year (oops, off topic...). Why? Continuous overcharge with no charge management (combined with owner laziness, to be sure). And yet the same batteries will last 10 or more years in spacecraft service. They take great pains to do charge management correctly there, because you can't just run up and change batteries in the satellite....

Partially correct. Documentation available at cadex.com tells that
individual (NiCd) cells can be dishcarged completely to zero to try and
restore lost capacity. This is not harmful to the cell. What should
not be done is discharge a _pack of cells to zero, since all cells are
not identical and surely one or more will become reverse polarized and
potentially damaged beyond recovery. I have discharged individual
cells to zero (a 220 ohm .25 watt resistor across the cell for a few
days works nicely) and recharged them without problems. A pack made
from such cells obtained surplus has been running my 5-watt dual-band
HT quite nicely for several months.

The radio won't be damaged from low voltage.

From: Joel Lafrano
Topic: 48 Message: 1648

Thanks for the reply; respectful suggestion;
Postings about spread-spectrum phones and how to decide which one to buy are "on topic" ? Why do we still discuss mods to scanners which cannot be modified (Pro-94) ? Why do we discuss listening to cell-phone calls when we all know its illegal ? Boring !!!!!!!!!!!! How about trunking, antennas, audio(we all know the Pro-94 is "hissy"), carrying cases, personal shacks, mobile applications, frequencies found doing a search, technical info, how about getting down and dirty with the soldering iron (I put an audio output jack on a RS Pro-2050 to significantly improve the volume and quality of the audio), etc. ??
Delphinios <bl00@...> wrote: Respectful Suggestion: Read my post. It's quite on-topic as it has a lot to do directly with scanning in general. From: Delphinios
Topic: 48 Message: 1650

Feel free to start such a discussion. Personally, I look forward to it.
However, that dosen't make other, less directly relevant discussions 'off topic'.

Just because you think they're 'Boring' or not, dosen't mean the rest of us do. In fact, the topics I find 'boring' are removed easially with a single keystroke. "D". I'd recommend the same technique. To be honest, I think the conversation change from "how do I modify my PRO94 to pickup cell phones" to "Why Cordless phones are insecure." was an excellent change of pace and something important to discuss that even some of us scanner users don't always think about. At the very least, it went from something that has been answered time and time again, to a useful discussion. If you find it boring, then try deleting the messages with that subjectline. This isn't a buzy group, and that's not diffacult, even using yahoo's mail client.

1651. New note included with the 11AO1

Yahoo group: pro94owners
Date: 2002-02-05 12:23:00 UTC
From: Slabe Ed MTWI
Topic: 1651 Message: 1651

Hello ,
I went to my local Radio Shack last night and out of the four new Pro 93's they had only one had the 11AO1 date code.
I explained the difference to the confused clerk who gladly sold me a scanner.
My 11AO1 has the firmware version 1.01 and does seem to work much better on the EDACS local electric company system.
The new note included with the new scanner was interesting See the attached .pdf file.
I scanned both front and back into the file. It announces the programming kit now available as well as a couple pictures of the screens it has.
I return the 07A01 tonight.
Ed Slabe
Thanks to everyone on this board who has helped make us all esp. myself a better scanner owner.

I would hope you are not giving out that kind of information over a non-digital phone. Regardless of the legal aspects of it an analog cell phone is just a two-way radio and nothing more. There are thousands of receivers that can tune in analog cell phone freq's.

Boring? Probably. Illegal? So what.

The fact that it is illegal makes it all that more appealing (to some). People get hacked software off the internet, they steal cable with pirate boxes, they steal satellite TV with copied cards. People love getting what they're told they can't have (like those Cuban cigars I got in Mexico). They know its boring and illegal but finding a way around the system is so much fun, it's something you can do but your neighbor can't.... ...bragging rights etc.

Subject: Re: [pro94owners] Re: PRO94 MODS

Hi Jay,
I ran a search under Yahoo "Pro-94" and in the first
page of hits it has a site with cellular Mods for the
Pro-94, but I can't get in that site.
I got another e-mail saying the cellular band is only
the older analog phones so that not much use to me.
Any way thanks for the feedback.
Regards,
Craig

Subject: [pro94owners] New note included with the 11AO1

Hello ,
I went to my local Radio Shack last night and out of the four new Pro 93's they had only one had the 11AO1 date code.
I explained the difference to the confused clerk who gladly sold me a scanner.
My 11AO1 has the firmware version 1.01 and does seem to work much better
on the EDACS local electric company system.
The new note included with the new scanner was interesting See the attached .pdf file.
I scanned both front and back into the file. It announces the programming
kit now available as well as a couple pictures of the screens it has.
I return the 07A01 tonight.
Ed Slabe
Thanks to everyone on this board who has helped make us all esp. myself a
better scanner owner.

Ed,

Send your attachement to either Glen or Me and we will "post" it
or "add" it to the "Files" section.The reason I don't allow any
attachments is for the safety of the members of this group from
any "Viruses".
I am sure all can understand my reasoning.
Also any emails not pertaining to scanning or info about
scanners,will be removed.

pro94owners-owner,
Harry

1665. Olympic Radio

Yahoo group: pro94owners
Date: 2002-02-07 23:24:44 UTC
From: John Wesley Brett
Topic: 1665 Message: 1665

This press release arrived at my work today.

John.
==========
February 2002 (Newstream) -- The Winter Olympics are here and officials in Salt Lake City are taking unprecedented precautions to ensure the security of the games this year. For the thousands of people - athletes and spectators - coming to the Winter Games, officials are going the extra mile behind the scenes to make sure that everyone can enjoy them in safety.

While most of the security preparations are closely held, one effort that will keep the city safer during the Olympics - and well into the future - is closing the gap in antiquated radio systems, which could have prevented police and firefighters from talking to each other during an emergency. Utah officials turned to the Federal Government for funding and technical help so that all emergency services at the Olympic Games could coordinate with one another during operational situations.

Officials at the Public Safety Wireless Network Program - the Federal program providing the help to Salt Lake City - point out that Salt Lake was hardly unique in its communications problems in the past. In fact, across the United States, when emergency services personnel try to talk to each other during operational situations, one third of the calls fail because of gaps in their communication systems.

To find out about the communications readiness of public safety in your area, go to the Public Safety Wireless Network Program Web site, at www.pswn.gov.

1670. Here is Trunked ;) RE: [pro94owners] Iowa City freq's?

Yahoo group: pro94owners
Date: 2002-02-10 15:45:02 UTC
From: Pete Van Vuren
Topic: 1667 Message: 1670

Oops, that is what I get for reading email half asleep...missed your request for TRUNKED. ;)
Anyway, this should help. Again , import it as comma delimited text into a spread sheet for easier reading.

1671. Fields per record. - Iowa City freq's?

Yahoo group: pro94owners
Date: 2002-02-10 15:51:50 UTC
From: Pete Van Vuren
Topic: 1667 Message: 1671

You can tell this based on fact that when you get to two fields that are not comma delimited, that would be a record switch, but to make it easier, I should have told you the first Iowa City freqs list has 11 fields per record or per line, the trunked list of freqs has 7 fields per record or line

Forget SAME on the Pro94. It is not really implemented on this radio. On a REAL weather radio SAME will allow you to reduce the weather warnings to only the ones for your county (or for some part of a county). You would look up the code for your county and enter it into the radio. The Pro94 will not do this. I love my 94 but I use a weather radio with SAME for my weather warnings.

Dear Group,

Just to let you know,so that we don't get invaded by any
more "Spam".This new setting has be activated.

Moderate new members(posts from new members require approval)!

Any previous member can still "post" as always,but now "all" the
Space Cowboys will have to come through a "Moderators" approval.
Any "Spamer" from with-in the group now,will be "Banned"!
Sorry for and inconvence this has caused for any of you in the group.

To All:

The other day, the issue of pop up ads on websites was discussed on "Good Day Sacramento" (KMAX, Sacramento CA) and Doug Brauner , the computer and car guy suggested two websites where internet users can go to try and stop them. So if someone can experiment with either or both of these let everyone know if they work: www.popupkiller.com or www.webwasher.com

BTW, what is the link to the digest of past issues on this forum?

Dave

1698. RE: [pro94owners] Re: Saving Faith!(Moderators Message)

Yahoo group: pro94owners
Date: 2002-02-19 16:25:45 UTC
From: Glen Tubbesing
Topic: 1686 Message: 1698

First, let me say that the pop-up ads at the bottom of all email messages are the means that we are allowed to use Yahoogroups for free. Yahoo is an advertiser-supported service, and if they didn't have the ads, I'm sure we'd be forced to pay $9.95 a month to use the service. It's just like watching commercial TV or listening to AM/FM radio. you gotta put up with the commercials if you want it for free.

Second. the link for the digest to view the message archive is:

To All:

The other day, the issue of pop up ads on websites was discussed on
"Good
Day Sacramento" (KMAX, Sacramento CA) and Doug Brauner , the computer
and
car guy suggested two websites where internet users can go to try and
stop
them. So if someone can experiment with either or both of these let
everyone know if they work: www.popupkiller.com or www.webwasher.com

BTW, what is the link to the digest of past issues on this forum?

Dave

1699. Re: Saving Faith!(Moderators Message) - Ads

Yahoo group: pro94owners
Date: 2002-02-19 16:55:57 UTC
From: Tom McKenzie
Topic: 1699 Message: 1699

I run Norton Internet Security and what I do is under "internet Zone Control" in the Restricted tab is list the following servers:

us.a1.ying.com
us.adserver.yahoo.com
ads.x10.com

what this does is not allow any connection to these sites and although I see a place holder, the ad never gets downloaded into Outlook Express. This should work with any firewall someone may be using....

btw, thanks to Harry for making the Pro-94 Word template on the group site, I have imported it into Excel and is an excellent template. for those that don't have it, go take a look under files/zipfiles It's called Pcl.zip - PRO-94ChannelList.doc(WinZip 25k). for thoses that don't know of it

Subject: RE: [pro94owners] Re: Saving Faith!(Moderators Message)

First, let me say that the pop-up ads at the bottom of all email messages are the means that we are allowed to use Yahoogroups for free. Yahoo is an advertiser-supported service, and if they didn't have the ads, I'm sure we'd be forced to pay $9.95 a month to use the service. It's just like watching commercial TV or listening to AM/FM radio. you gotta put up with the commercials if you want it for free.

Second. the link for the digest to view the message archive is:

Topic: 1702 Message: 1702

Group,

As Glen stated,If you wish to come here for "FREE" you are going to have to "DEAL" with "AD'S".
As for "BUTT HEAD" Sid. I have "COMPLAINED" to Yahoo about how the "AD'S" effect the "POSTS" on the message board as far as "INTERFEARING" with and posted "LINKS".
I watch this board probaly more then any other "MODERATOR" on Yahoo. So if you want to stay a "MEMBER",don't tell me that I am not doing my job! If you "KNOW" anything about the "Internet",it lives by "AD'S".Thats why "ALL" of the Dot.com's business have "DIED"(NO Ad revenue)!!!
Spam is peoples BS,Ad's are run on and by the "Server".There are programs that will stop these "Pop-Ups" and "Links" to these Ad's but also your mouse button will close'em(my finger works just Fine).Your Choice!

1705. FW: [phlscanner] MOBILE SCANNER IN PHILLY

Yahoo group: pro94owners
Date: 2002-02-19 19:04:23 UTC
From: John Fleming
Topic: 1705 Message: 1705

Please reference the two below posts... is the information correct? What do you know about the legality of a mobile scanner?

John

-John R. Fleming III
e: jrf@... | c: 215.802.9904 | www.johnfleming.info

Subject: RE: [phlscanner] MOBILE SCANNER IN PHILLY

While the ordinance remains on the books, the ordinance was found to be unconstitutional in 1982 by Judge J. Earl Simmons. While it was ammended in 1983, the basic grounds for overturning the ordinance still exist. It is my understanding that, unless the Judge's ruling is appealed to a level above Municipal Court - the ordinance cannot be enforced.

One thing everyone should ALSO remember...

Webpages are for HTML. Email isn't.

When you post to any Yahoogroups list with HTML,
instead of a simple text ad, you get a BIG html ad.

Everyone get the point??
```

1707. dc adapters?

Yahoo group: pro94owners
Date: 2002-02-22 07:12:59 UTC
From: muffin
Topic: 1707 Message: 1707

which dc adapter for the car cig lighter do you use for the pro94?

& WHERE do you plug it into the pro94??

the manual is really vague & the one on the radio shack webpage ,, that they suggest, certainly doesnt look like there is ANY plug 'hole' for those adapters.

[Non-text portions of this message have been removed]

1708. RE: [pro94owners] dc adapters?

Yahoo group: pro94owners
Date: 2002-02-22 08:47:28 UTC
From: Glen Tubbesing
Topic: 1707 Message: 1708

I don't understand what is so vague about the instructions. On page 14 of my manual, it says.

"You can power the PRO-94 from a vehicle's 12V power source (such as cigarette-lighter socket) using a 9V, 300-mA DC adapter and size H Adaptaplug (neither supplied). Both are available at your local RadioShack store."

Then, the manual says that the adapter must supply 9V DC, deliver at least 300 milliamps, and that the center tip must be set to negative. Easy enough to do. Looks like either the 273-1810 or the 273-1805 adapters from RadioShack would work.

If you look at the left side of the radio, there should be a hole about half way down. That's where you stick it... I mean, that's where you stick the plug in. ;-)

It means that the adapter can supply UP TO the specified current and still maintain the output voltage within spec. The device will, of course, only draw as much current as it needs. Still, it is a good idea to get an adapter that is close to (but not lower than) the current spec of your device. The reason for this is that most 'economy' AC adapters are unregulated and, as such, rely on the device to 'pull' the voltage down under load to the specified value. If you were to use, for example, a 1-Amp AC adapter to power a device that only draws, say, 100 milliamps, you may be running the device dangerously close to the maximum voltage that it will tolerate without popping capacitors or otherwise letting the smoke out of delicate parts. Adapters that are electronically regulated will not have this potential problem.

That having been said, a 500 mA adapter would probably be just fine for the 300 mA gizmo.

Hello,

--- In pro94owners@y..., busyman91@a... wrote:
> I can pick up traffic. I runs through the IDs and I can hear the people on
> the channels, but the don't follow each other.

One of the things that confused me initially about following trunked systems was the SRC button. After programming in the frequencies for a trunked system (Lexington, Fayette Co, Univ of KY) I initially got traffic. But somewhere along the line, I turned the search feature off (pressed the SRC button) while tracking both conventional and trunked systems. Anyway, I was baffled by the "-- ---" display and suddenly no traffic. Figured out the search feature was off and I hadn't programmed any talk groups or ids into the trunked system. So, for right now (until I get around to programming the ID) I just keep it in search mode. That does, however, mean I get traffic about which city bus is going to the garage and whether the computer tech can boot a particular pc.

Hello,

I know here in Kentucky, there is a statute banning the use of mobile scanners. Exceptions include law enforcement officers, tow truck operators, and holders of amateur radio licenses issued by the FCC. Now, I don't have any idea when the last enforcement action involving fines or confiscation of equipment may have occurred in KY. But I went ahead and got my Ham license. Simple solution.

There is a web site that summarizes the laws:

http://www.afn.org/~afn09444/scanlaws/

Talk group lists are a wonderful thing. I have several banks of lists
set up so I can monitor police only, police + fire, fire only, etc.

Slightly off-topic, but anyone interested in firewalls should go to
www.grc.com and read Steve Gibson's reports on which ones work well and
which ones don't. Oh, and read some of the other stuff Steve has
published there, it will scare the heck out of you.

Just a question for ya'll. I have my county's trunked system programmed in my scanner - I think properly. I am in Montgomery County, PA - and I have all the 800mhz freqs I found for the trunked system programmed in. I also have the talkgroups programmed in for my immediate areas. When I hear transmissions I sometimes feel as if I miss a transmission somewhere in the middle. I hear a dispatch then some discussion relating to it, but it doesn't seem like a complete conversation.

Any ideas?

Hi all...I have been an owner of my pro-94 for just over a year now. I have truly loved having it, and it's also given me the incentive to go back to school and the EMS business. :-)
Anyway, I have been running just the scan ids for my small town had everything perfect on there. Now I am working with 2 other services, have the frequencies programmed, but cannot remember how to program the individual ids into the darn thing. I have searched everywhere for the info someone was nice enough to email the info to me a year ago that was worded in the terms I could understand, instead of the round and round stuff of the manual. Gotta keep in mind I am also a blonde! ;-)
Anyway any help that y'all can offer would be great. Thanks a bunch.

1728. trunk programing

Yahoo group: pro94owners
Date: 2002-03-08 21:12:22 UTC
From: enderblair
Topic: 1728 Message: 1728

I've had my pro-94 for a few months and really enjoy it. But I just recently moved into an area the uses trunking systems and I'm having a little trouble. I live in Rome New York and I have about 5 trunking systems that I can listen to in the area. All are Edacs systems.

Here is my problem. I programed the first trunk system in the first trunk bank. It found the data channel and it worked fine. Next I programed the second trunk system in the second trunking bank. It seemed to find the data channel and it looked like it began to trunk. But there was one problem. It wasn't picking up anything. Then when it switched over to conventional it would pick things up. I programed the 3rd,4th, and 5th systems in the 3rd,4th, and 5th trunking banks. Same problem with those. So I deleted everything and started over. This time I did a different system in the first bank and it worked fine. The next banks didn't. Same thing. What did I do wrong? Also, how do I make it stop switching from conv. and trunking and have just stay on trunking. I've read the manual 50 times and I still can't get it. It's probably my own stupidity but that's why I'm asking you guys. Please HELP!

Also, What about this s-bit thing. I tryed to get to the s-bit menu but it didn't get there. Do I need to change anything for the Edacs systems? Thanks for all the Help.

Ken,
On mine you have to push the trunk button in order to trunk. It then only goes to conventional if you press the trunk button again. Is your's switching by itself? I'm quite new with scanning. I have the conventional channels on my A bank, and the trunking channels on the B bank. So far though when I hear something and click on trunking, I find it only trunks that set of freq. It doesn't continue looking for conversations on the other channels in the trunked bank. Please let me know what you find out. I'd very much like to learn more about my scanner. I too have read the book over and over, and at this point I feel like a real dummy. Any help you can throw this way would be very appreciated.
Thanks,
Lynn

From: Joel Lafrano
Topic: 1728 Message: 1731

On the Pro-94 you can't scan BOTH the A and B banks; its either A or B. So if you put conventional freqs
somewhere in the A banks, and trunked freqs somewhere in the B banks, you can't scan both at once.
MIx them in the A or B banks and it should work fine.
Some earlier model 94, DON'T allow you to scan conventional and trunked freqs at the same time. This was a firmware
upgrade last year.

1734. Trunking with the PRO-94

Yahoo group: pro94owners
Date: 2002-03-16 01:49:00 UTC
From: bcnuttall
Topic: 1734 Message: 1734

Folks,

In the central Kentucky area (Frankfort and Lexington) there is only one trunked system, an EDACS system. I have a PRO-94 "A" model (there is an A in a little box to the right of the catalog number on the nameplate on the back). This model has firmware that allows scanning both trunked and conventional (not just one or the other). What I have done is programmed the trunked system into bank A10. Banks A1-A9 are conventional frequencies divided by city and service type. I leave the 94 in trunked mode and it scans through the conventional frequencies then checks for activity on the trunked system.

According to the instruction manual, you can have only one trunked system per bank. However, as that usually leaves many empty memory locations in a particular bank of 50, there are ways to mix trunked and conventional frequencies in a bank. I don't think you can mix two EDACS systems in the same bank, but you can mix one EDACS and other trunked systems that don't require frequencies in logical channel order. Trunked and conventional can be mixed.

Two trunked systems can be mixed in the same bank, but they can't be scanned at the same time. Nor can you scan both trunked and conventional in the same bank. Generally, the strategy is:
1) two or more trunked in one bank, then lock out the control channel and frequencies of the system(s) you aren't scanning
2) mix of trunked and conventional in the same bank, then
a) to scan the trunked, lock out the conventional frequencies
b) to scan the conventional, lock out the trunked control channel (if you lock it out, you will be able to hear partial conversations on the remaining trunked frequencies

Why would you want to do this? Maybe you travel back and forth between cities like I do. It's easier to store everything at once and use the scanning lock out feature than to continuously reprogram the 94. (If only I had known when I bought the 94 that there were computer programmable scanners available.)

A lot of this has been discussed on the trunkcom email list. See http://mailman.qth.net/mailman/listinfo/trunkcom and check out the archives.

Next, I have to learn how to program scan-ids. Quality time with the Radio Shack manual, huh?

1735. Adding IDs

Yahoo group: pro94owners
Date: 2002-03-18 02:52:14 UTC
From: greggerj
Topic: 1735 Message: 1735

Hi there. Kinda...well actually really confused on how to add the right frequencies. I am new to the trunking scanner in regards to programming it.

My local police department uses an 800mhz freq. They have the trunked system and break it up. Which I believe are the id's. For example the frequency is 866.0375 and the city is broken up East/West. East being 46 and West being 360. How do I get those numbers (46/360) to go on the scanner?

This may be a stupid question so please forgive me just frustrated.

Thanks

Topic: 1735 Message: 1737

Hi Greg,

I'm new as well to scanning. Our local county operates on non trunked frequencies. However, surrounding counties operate on trunked. My scanner is a pro94, and doesn't operate trunked and non trunked at the same time. Currently I have them in the same bank, different channels, but I too am a bit lost. Hope you don't mind if I tag along here, and pick up some pointers. I don't understand what the ID's are. I picked up a list off the internet, and also purchased a book called "Police Call". This listed all the frequencies used by the counties/cities that surround me. I added them to the channels accordingly. Any further advice, I'd appreciate as well. Seems I have a lot of "nothing" going on at present.
Hope everyone has a good day.
Lynn

Subject: [pro94owners] Adding IDs

Hi there. Kinda...well actually really confused on how to add the right frequencies. I am new to the trunking scanner in regards to programming it.

My local police department uses an 800mhz freq. They have the trunked system and break it up. Which I believe are the id's. For example the frequency is 866.0375 and the city is broken up East/West. East being

46 and West being 360. How do I get those numbers (46/360) to go on the scanner?

This may be a stupid question so please forgive me just frustrated.

Thanks

Joel,
Can anything be done to update the pro94 to do both, or is purchasing a new one the only option?

On the Pro-94 you can't scan BOTH the A and B banks; its either A or B. So if you put conventional freqs
somewhere in the A banks, and trunked freqs somewhere in the B banks, you can't scan both at once.
MIx them in the A or B banks and it should work fine.
Some earlier model 94, DON'T allow you to scan conventional and trunked freqs at the same time. This was a firmware
upgrade last year.
enderblair <enderblair@...> wrote: Thankyou Lynn for responding, but it didn't help me much. In
answer to your question, yes, it switches from trunking to
conventional by itself. Hopefully someone else can help us out.

From: Glen Tubbesing
Topic: 1735 Message: 1739

Lynn,

Once you have correctly entered all the frequencies for your trunked system, press the TRUNK button to enter the trunked mode, select the trunked bank to scan, then if you press the SRC button, your scanner will start searching through the entire system and will play any transmissions on that system that it hears. The numbers that show up on the screen are the talk group IDs. Monitor these for a while and note down the numbers that have the most interest to you. Then, when you have completed a list, you can enter those talk group IDs into a talk group ID list. Look in your manual under "Using Talk Group ID Lists" to find out how to store those IDs. Basically, you press TRUNK, then the trunked bank number, then MAN, choose a location to store the talk group IDs, press PROG, the ID number, then the E key. There's also information in the manual on how to temporarily store talk group IDs when you are in the search mode.

Hope this helps a little.

Hi Greg,

I'm new as well to scanning. Our local county operates on non trunked frequencies. However, surrounding counties operate on trunked. My scanner is a pro94, and doesn't operate trunked and non trunked at the same time. Currently I have them in the same bank, different channels, but I too am a bit lost. Hope you don't mind if I tag along here, and pick up some pointers. I don't understand what the ID's are. I picked up a list off the internet, and also purchased a book called "Police Call". This listed all the frequencies used by the counties/cities that surround me. I added them to the channels accordingly. Any further advice, I'd appreciate as well. Seems I have a lot of "nothing" going on at present.
Hope everyone has a good day.

From: Glen Tubbesing
Topic: 1728 Message: 1740

Lynn,

As Joel stated, the Pro-94 can only scan the A or B bank, but not both at one time. The Pro-94A, however, can scan both conventional and trunked systems at the same time, while the Pro-94 will only do one or the other. The 94A has a small A in a box next to the model number on the back of the radio, while the 94 does not. AFAIK, Radio Shack hasn't come up with a way to upgrade the 94 to a 94A, although there was talk about it a few months ago when the 94A came out. So, at this point, the only sure fire way to upgrade to the 94A is to purchase a new one.

May I add that if you know little about programming a Scanner(even analog)or editing.This could be hard to understand when actually if you read the manual and press the buttons like it tells you to,you will get the results.Work on it till you get it.
Glen has also stated the best way to do it.You can always dump everything by re-setting the scanner if you want to start over(you can read that to).
As to the next question:

>Can anything be done to update the pro94 to do both, or is
>purchasing a new one the only option?
>Lynn

If you recently purchased the 94 I believe you have 90 days to return it "No questions asked".If you are over 90 days,I have seen the 94A on sale for $199.Rumor had it(not sure if the thread is on the pro94owners board or not)that they are moving on from the 94.The 94A was the upgrade.Most owners in the group I believe have PRO 94's and can not do T or C at the same time like the 94A model can.

Regards,
Harry

Thanks for your help. I very much appreciate it. I started compiling a
new list of frequencies for Maryland yesterday. When I get that complete
I'll reprogram and start anew. I had many in that I wanted, but I had them
sorted by area, not numerically. We'll give it another try.
Thanks again.

From: redneck1174
Topic: 1747 Message: 1747

Yes that's what you all can call me. LOL. I just joined the group today because I'm having one H3#L of a time trying to program and receive with this scanner. I receive fine on the "conventional" mode. But when I try to receive on the trunked side it doesn't seem to do anything. I am located in Oneida County NY. This county uses EDACS systems. I programmed the trunked frequencies as told to by the manual and by a fellow scanning site(NF2G.com) I have followed the directions in the manual and a few websites all with the same outcome.... Nothing happens on the trunked side of the scanner. My area has approximately 5 trunked systems in it. Oneida, Utica, Rome, Oneida County and I think one more. I am closer to Utica so I am trying to set up the Oneida County and Utica system on this scanner. Anybody with some ideas, please throw them out at me, I will appreciate all responses to this "problem" of mine. TRUNKING TO ME = GREEK!!!

John:
Take a look at this:
http://pro-92.com/software.htm
I've tried several, with the best results from Win92.
Once you find the program that suits your needs best, you can
probably save yourself a lot of data entry keystrokes by opening your
favorite search engine and entering:
SPG Files [City]
If you use Win92, be sure not to overlook the feature that allows you
to work with partial files. This allows you to assemble entire spg
files by taking one or more banks from existing spg files.
Hint: If you use Win92, after downloading the program, don't forget
to return to the download page, scroll down, and read the very good
instructions. I struggled with the program for several days without
realizing that I had overlooked the instructions!
Good Luck!
Richard

Hi, this is Ken. Where in Oneida county do you live? I live here in Rome. I'm having a little trouble my self. As far as your problem, it's hard to tell how to help. When you say it does nothing, does it just conventional scan and not trunk, or does it just have a blank screen. Or does it look like it is trunking but it doesnt pick up anything. The latter is my problem. I know you probably tried this but did you put the numbers in the correct order. At first I would only try putting one edacs system in to star with. Dont mess with others until you have one figured out. Hope I was helpful,

Ken

Hi,

I was recently alerted to the following on the APRSSIG and other
lists:

- ---
- ---

http://slashdot.org/articles/02/03/29/1833235.shtml?tid=111

>From the slashdot.org website:

"Yahoo is pulling a good one on everyone. As a matter of some changes
on
their system, they have kindly reset everyone's marketing preferences.
So,when you signed into Yahoo for a Yahoo ID, you were given a chance
to
set what sort of notices you wanted yahoo advertisers to send to you,
well, they just set EVERYTHING to Yes for you. The poster was kind
enough to include instructions on how to turn these settings back.

To change this...

Go to your Account Information screen (for each and every ID you have)
and about mid screen you will see "Edit Your Marketing Preferences"
link. Click on it and set them back to the way you want them, otherwise
get ready for *LOTS* of advertising spam type emails from Yahoo's
advertisers. Note also at the bottom, that you will be marked YES for
'By US Mail' and 'By Phone' as well."

- ---
- ---

If you do not have a Yahoo ID, this is not an issue for you. If you've
never provide Yahoo your mailing address or phone number, this is not a
problem. My reading indicates that only a "yahoo.com" address will get
this spam. A fast way to get to your profile is to go to
http://edit.my.yahoo.com/config/eval_profile and enter your Yahoo ID
and password.

I have a Yahoo ID and foolishly provided my mail address and phone #
when I signed up. Fortunately I don't use my Yahoo address anymore.

1753. Hello There

Yahoo group: pro94owners
Date: 2002-04-01 04:52:52 UTC
From: davidjsnoble
Topic: 1753 Message: 1753

Hi Folks,

I'm glad I found this website. I really enjoy scanning, but I don't know too much about it. I used to do it years ago on my old scanner, but I'm having a few problems. I went to Radio Shack to buy a new scanner and the guy told me this was one of the best. Pardon my ignorance, but can someone briefly explain to me what Trunking is? My local PD (Elk Grove Village, Illinois) appears to have a digital radio service, does this mean I can't hear them?

Any and all of your help would be greatly appreciated.

Thanks,
David

David,

Sorry to say,but you can not pick-up Digital with the Pro94.
No one has a scanner made yet to recieve this signal.
Search the net to learn about "Trunking".

Regards,
Harry

Hi David,
Trunking, if I'm understanding correctly, and please jump in the rest of you, is the use of multiple frequencies instead of the old way of everyone using the same channel. A local PD may use a set of say 10. After a transmission is sent..the system automatically jumps to the next frequency, rotating through the system. When you're trunking the scanner will follow a conversation, or group that share those trunked frequencies. Not sure if I'm explaining exactly what you're looking for. Hope this helps.

I am not sure that it rotates from one channel to the next, I think it actually chooses channels at random, and then it is almost a "key tone" that identifies which trunk is which ID... or something like that???

It depends on the type of system. A GE/Ericsson EDACS system will step through the different channels in order (hence, logical channel order), while the Motorola system simply looks for an unused frequency. It's simply a way to use a group of frequencies more efficiently.

David:

Check out this site:

http://www.trunkedradio.net/

On the left side, near the bottom, you'll find a section titled System Info, which gives a pretty good overview of how each system works. When it comes to programming a trunking scanner, there's no substitute for practice.

Richard's suggested site, trunkedradio.net, is one of the best radio resources I've seen.

In a nutshell: trunking allows multiple agencies (fire, police, medics, streets dept., etc.) to use the same set of frequencies and therein lies the efficiencies. The various systems all provide a way of identifying who is transmitting and setting all of the other radios in that person's group to the same frequency all at the same time. This plays on the concept that radio transmissions are "bursty" in nature; that is, not everyone wants to talk at one time and transmissions are usually brief. So, 100 potential users in 4 different agencies might easily share 5 frequencies. What the trunked system accomplishes is that none of those users or departments ever realizes that the frequencies are shared, if the system is designed corrrectly.

Hope that's a good start. Please don't hesitate to bring more questions to the group after cruising some of the web's resources. Good luck.

Topic: 1762 Message: 1763

There are also signal splitters that allow you to use you car's FM antenna to drive your scanner along with the radio. They usually retail for around $15, check the radio shops in your area. You can also get a replacement FM antenna for most cars that doubles as a CB antenna.

Hello,
I have a Pro-94 which I would like to sell. I bought the Pro-93
and am hooked on the computer programming.
It is in excellent condition with the date code of 08 A 99
It comes with all original packing and books.
I paid $199. for it and would like $100.00 plus shipping charges.
I live in the Columbus, Ohio Area but can ship it anywhere.
I would prefer a money order.
Please contact Ed Slabe ed.slabe@...

Thanks

1765. military aviation frequencies

Yahoo group: pro94owners
Date: 2002-04-12 03:01:51 UTC
From: sinbad5210
Topic: 1765 Message: 1765

I emailed RS regarding the lack of handhelds with coverage of military aviation frequencies. This is there response:
Concerning your interest in military air frequency coverage on HH Scanners,
yours is the first request I have had in over 2 years. I appreciate your
interest - comments like yours cause us to take action, but I hope you
understand that unless I get lots more requests, we probably will not add
mil.air. freq to new HH scanners. Hope you understand - we do listen, but
this issue is not close to critical mass. Ask your friends to also email
me!

The email address that it came from was:
Anna.Scognamiglio@r...

The text was a response from Wayne Wilson WR5S, Radio Communications Buyer.

Guess you all need to email them.

Sounds like an idea. Someone want to take care of cross-posting this
to some of the other scanner lists?

Topic: 1768 Message: 1768

Good morning,

Just wanted to shoot this link out to you all, just in case you were somewhat local to the area. The Wyndmoor Fire Company, Station 82, has began to put together a half decent website. I am in discussions with the web designer working on it, and slowly he will be adding resources for scanner buffs and such. Freq listings, info, etc.

The site also offers a decent mailing list where I have seen some discussions about the whole MontCo PA "new communications system" that none of the stations can afford. It might be interesting to hear things about here and there...

The whole thing is still being designed, but coming along nicely.

The URL is: www.wyndmoorfirecoc.om

1772. RE: [pro94owners] PRO-94 help

Yahoo group: pro94owners
Date: 2002-04-12 15:06:58 UTC
From: Glen Tubbesing
Topic: 1769 Message: 1772

James,

Let's take a look at what frequencies the scanner does not receive...

54-108... these are TV channels and FM radio frequencies...

174-216... more TV channels...

225-406... OK, this is MilAir. Some want these frequencies on a radio, but it's not on this one, and I don't believe there's any way to modify to get those frequencies...

512-806... here we've got a lot of UHF TV frequencies missing.

824-851... these are cell phone input frequencies that are illegal to receive in the US, and there is NO WAY to modify to receive those.

869-896... these are cell phone output frequencies, and they too are illegal to monitor.

956-1240... there are a variety of services using these frequencies, like Sats, pagers, wireless phones, etc.

So, what are you missing?

73,
Glen Tubbesing

James,
Sorry, to the best of my knowledge, they've got those fixed so that it can't be modified. About the only option as I see it is to buy a scanner there.

Subject: [pro94owners] Re: PRO-94 help

Glen,
thank you for your frequency breakbown,
What I am looking for is for the cellphone output freq. I know they are illegal in the states, however I am no longer state side. I live and work in Europe. I used to have a unit by RCA that was "fixed" to receive input and output freq. however that unit is not working anymore.
Can you help me at all?

Thanks

Yes they seem to work fine on it.. The MetRadio system has been around a
few years now and is due for replacement with a TETRA digital system in
the next couple of years.. For further info on the system:

1777. Newbie questions

Yahoo group: pro94owners
Date: 2002-04-16 23:11:45 UTC
From: Jacques L. Yerby
Topic: 1777 Message: 1777

Aloha from Hawaii:

I'm a newbie with the PRO-94, having taken advantage of a recent Rshack sale last week. I'm a retired military guy coming from the comm. world and I teach computer science classes at a local university. I always preface my questions to help desks with this info so I can get a higher tech answer when I ask a question.

Anyway, here goes:

1. The manual says to hold down the SCAN button in order to change the state of the "Status Bit Ignore". I have not been able to get this to work.

2. HPD has been playing around with trunking for a couple of years with limited success. They are evidently using EDACS. Within the last month or so they have evidently turned the system on permanently and set the frequencies. One of my friends told me that they have gone digital and there are no trunk scanners out that can handle digital. Is this true?

Mahalo (thanks)

I just did it with my Pro-94. Make sure that you are in trunk mode
first before this works. Press TRUNK, select your trunked bank, then
press SRC or SCAN, then press and hold the SCAN button for about 3
seconds, and the screen should say S-BIT on or off. Up or down arrow to
change, then press the E button.

>2. HPD has been playing around with trunking for a couple of

Not yet, but Uniden is working on a digital version of the BC-780 that
is expected out early next year. If a signal is encrypted, it won't
decrypt, but it will receive standard APCO25 digital signals.

1779. Pro94 replacement?

Yahoo group: pro94owners
Date: 2002-04-19 01:29:10 UTC
From: pvanvuren
Topic: 1748 Message: 1779

OK, I'm ready to move up to a scanner that I can interface to my pc. Any recommendations? The trunking of the Pro94 is somewhat overrated too I found out. I bought it because I knew the CSPD was switching to trunking, but it turns out if I understand all of this correctly that the trunking in the Pro94 is an analog trunking? And CSPD uses a Digital Trunking that there are not scanners out for at this time? Is that all correct? The trunking thing is beyond my current level of understanding...obviously ;) But I am ready to have a pc interface for the others...like US Forest Service, etc.

Thanks,
Pete

Unfortunately, there's no computer control for the Pro94 either. I think the Pro93 or Pro92 offer it, or you could get the Uniden BC245 or the BC780.

There aren't any digital capable scanners available from anybody right now. When you say you want one that interfaces with your PC, do you want full PC control or just PC programming? The Pro-92 and Pro-93 (and their desktop counterparts) both have programming interfaces, but the I believe the Pro-2052 is the only scanner available from Radio Shack that allows PC control. I think I saw it on sale at the store last weekend, too. There are of course many other vendors...

Backup of frequencies on the radio in case of reset, for starters. Sure saves a lot of time over having to enter a list of 1000 frequencies manually! I sure wish the Pro94 had it!

From: airsquad9
Topic: 1784 Message: 1784

I'm selling my almost new Pro-2052 trunk tracker with the WinScan programming software. It's almost new (a few months) always been inside and I still have the box and all that goes with it. Mint condition. For anyone interested please e-mail me as soon as possible.

Price: $200 (includes shipping)
Trade: Hand-held scanner that includes Military air in good condition (not picky on which one, just write me and let me know which one.)

Please respond to my e-mail directly so we don't keep the list tied up...

1790. Scanner users

Yahoo group: pro94owners
Date: 2002-06-12 16:27:22 UTC
From: scannerresearch
Topic: 1790 Message: 1790

I am currently doing some research on scanner users and would like to take a few minutes of your time and ask you for some help.

All the people I've talked with so far that use scanner have been either hams or radio hobbyist, but what I'm really looking for right now are.....

1) Individuals that use and rely on scanners in their line of work, on a day-to-day basis.

2) Stories of crimes that have been solved, or prevented with the use of scanners.

3) Stories of crimes that have been committed with the use of, or in conjunction with scanners.

I'm posting this message to several scanner related groups, so if you see more than one copy of this message, it isn't spam!

If you can help me, please email me directly, do not reply to this message!

Thanks for taking the time to read this!

Actually... the Pro-94 may have the capability to be controlled by a computer for some type of purpose. If you open it up you will see a slot for a type of ribbon cable. By looking at the schematic from the service manual it shows that it is used for some type of data transfer. Why did they leave this slot empty? In-circuit programming at the factory?Hmmmmm

I posted a link to a portion of the schematic in the Bookmarks section of the message board. I prefer the Files section but I'm locked out of it... By the way I also posted a link to copies of the full schematic on the Pro-94.

Maybe the moderator will be nice enough to post and keep this valuable information on this Yahoo board. I may end up removing the schematics from my sever in the future to preserve space.

By the way, if the moderator starts keeping this info on the Yahoo board I will post mods for the Pro-94. Hint hint :)

The Pro-94 does not have the capability of computer control. The internal connector is strictly for downloading (flashing) firmware into the scanner ROM and possibly test bench diagnostics/service.

There are quite a few messages in the archive of this group to that effect- it's been debated for years, but I don't believe anyone has ever proven the connector can be used for anything other than loading the scanner with its firmware.

Happy scanning!

73,
Marlo- KA2IRQ

Firmware was my second guess with the in-circuit programming. Plus the datasheet for the microcontroller points towards the same thing. If Uniden didn't cover up the main CPU with resin then you might have a fighting chance at adding on the circuit needed to do programming, whether or not you have to get to the firmware first to mod. The firmware doesn't exactly look hard to get at and I'll be giving it a try somewhere in the near future. The same goes for the Pro-2052.

Has anyone given a guess as to what the 24LC64T EEPROM is used for exactly? I have a theory as to what it's used for besides what the manufacturer of the micro had in mind. If my guess is correct then we may be able to unlock unauthorized freqs.

I'll explain later but first I'll see what others have to say.

Topic: 1803 Message: 1804

I have the same problem, sometimes when plugged in, and I turn on the scanner, it flashes on for a second then goes off, I have switched wall jacks, and still have the same problem. It happens about half the time. It's been going on now for about 5 months, just need to find the time to take the thing apart and find out what's up, I believe it is from the jack in, but until I get in there, dunno..

Either you cracked the jack from the traces on the board or you may have hooked up the voltage polarity backwards blowing a component. The most common event in using a power supply for the car is that a lot of them don't let you reverse the tip polarity and most people assume that its fine to use it as-is.

No matter, if you know how to solder and open up your own radio I have posted a link to a portion of the schematic in the Bookmarks section of the message board that shows the components to check and fix.

Make sure that the jack fits correctly. Even with the correct coaxial connector if it doesn't fit "deep" enough it will have a tendency to briefly slip away and even if it goes back to its original state by itself or if you push it back in you will still have to pull it back out completely and then plug it back in for the radio to turn on again. Take a look at the schematic I posted a link to in the Bookmarks section of the board and you may see why you have to remove it and plug it back in having a better visual of the circuit handy. I have that problem with my homemade power supply for the car. Eventually I'll get a connector that fits better.....

Are the power supplies you are using for the car and in the home
brand new? If so make sure that the connector is also the right size
in the first place and of course make sure you have the correct
polarity set as well.

I'm not sure but maybe they're saying to take the speaker itself from inside the lapel speaker and use that? I don't remember the exact size of it in the lapel but I do remember it being a bit larger that the one in the Pro-94.

It won't hurt to buy it and see, if all else fails just return the lapel after your done :)

1811. Newbie Question -- Battery/AC Related

Yahoo group: pro94owners
Date: 2002-07-02 23:05:11 UTC
From: worldsolio
Topic: 1811 Message: 1811

Hi Guys! I am a newbie with my Pro-94. I have a question that my local Radio Shack cannot answer. I just bought the ac adapter for the scanner today after wearing out the required 4 batteries in less than 2 days! Right now, I have 4 fresh, new batteries in the scanner with the setting set to "alkaline" (they are regular unchargeable batteries). I now also have the ac adaptor connected to the electrical outlet. Anyway, my questions are: Should I move the setting inside the battery compartment to "jack" or not? Or should I keep the setting on "alkaline" as long as I keep the batteries in the compartment? This way, I can use the scanner ac while at home and have the batteries power it while I am mobile without having to take the batteries out and put them in constantly. Can I do this? What I am afraid of is that even though I have the ac adaptor connected, that leaving the batteries in with the scanner set to "alkaline" is really only keeping the batteries as the power source for the scanner and not the ac. With a regular am/fm radio, it is either set to "ac" or "batteries"! I am a bit confused with the choices for this scanner. I appreciate any help provided.

1812. Re: Newbie Question -- Battery/AC Related

From: bachelorsgrove_com
Topic: 1811 Message: 1812

1) If you have regular batteries inside, with the switch inside the battery compartment set to ALKALINE, and you plug in an external power supply, it will draw power "only" from the external power supply.

2) If you have rechargeable batteries inside, with the switch inside the battery compartment set to NI-CD, and you plug in an external power supply, it will charge the batteries while you are using it but it draws power from both the external power supply and the batteries at the same time to keep it powered up. Note: operating your radio while it is charging will take the batteries longer to recharge.

Unless something has drastically changed in later versions of the Pro-94, the switch inside the battery compartment only has 2 positions. One is labeled "Alkaline", the other, "Ni-Cd." There is no "jack" position on that switch. All that the switch does is allow you to use rechargeable batteries in the radio. In the "Alkaline" position, no power from the AC plug goes into the battery compartment, thereby protecting non-rechargeable batteries from possible damage. In the "Ni-Cd" position, a small portion of the current from the AC plug goes into the batteries, thus allowing them to recharge inside the radio.

Chris,

You may want to look back through the archives from about a year and a half ago. Try from around January, 2001 to March. I recall a great deal of discussion about leather cases for the radio around that time, and maybe a little earlier, around Christmas. Go to http://groups.yahoo.com/group/pro94owners/messages and take a trip back in time!

1818. Re: Batteries and the AC Adapter

Yahoo group: pro94owners
Date: 2002-07-03 13:20:19 UTC
From: Judy Vaughan
Topic: 1818 Message: 1818

I am new to scanning, to the Pro 94, and to this group. As a "Newbie" I have many questions, but what is prompting me to write today is the discussion about batteries. Glen stated, "...in the "Ni-Cd" position, a small portion of the current from the AC plug goes into the batteries, thus allowing them to recharge inside the radio." I would like to know if the unit is designed for the initial charge of new rechargeable batteries and if so, how long would that take for Ni-Cd and how long for the Ni-MH? Also, somewhere I read a post to the effect that it is not advisable to use the Pro 94's AC adapter with Ni-MH as they require longer charging and may overheat resulting in damage to the scanner. Any comments are appreciated. Thanks!

Judy

The 'official' way it to use the special tool, basically a tube with two protruding notches that fit into the ring. Since most of us don't have one, a pair of small precision needle nose pliers will work. If you don't have one of those, two small screwdrivers can also be used.

The radio is designed for use with NiMH batteries. That means the battery charging circuit is designed for them as well. Put your new NiMH batteries in, plug the radio in, and they should charge in a days time assuming you're using the radio some during that time. I see no harm leaving the radio plugged in 24/7 - I do it all the time, and haven't hurt the batteries yet.

NO, the pro94 IS NOT designed for NiMHs!!!

There's been a lot of dicussion on this. Most of it by me, I think...
:-) Go to the archives and read the past messages on batteries and
charging; the charging circuit in the 94 is NOT optimized for NiMH
(despite what the manual says), and I personally do not recommend them.
I have posted hard data on this subject (which no one has convincingly
refuted) and links to battery manufacturer information. Bottom line:
yes, NiMH will work. But you will not get your money's worth out of
them. NiMH are similar to NiCd, but require more sophisticated charge
management than the 94 provides for best results. NiCd is really the
better choice, and there is not that much difference in capacity these
days. The blue ones from Rad Shack seem pretty good, stay away from
the gold/silver colored ones. I have had excellent luck with surplus
Sanyo Cadnica batteries from where I work that are three and four years
old.

For the original poster, I have provided data on charge current and
recommended charge times in a previous post. Check the archives.

The main advantage of Ni-MH batteries is that they do not have the so-called 'memory' effect. You can top off their charge at any time with no adverse effects. They also do have more storage capacity. The high capacity Ni-Cad batteries you are referring to have a storage of 1000 mAh where most Ni-MH batteries are in the range of 1600-1800 mAh.

That being said, I am happy with the before mentioned 1000 mAh AA Radio Shack Ni-Cad batteries in my Pro-94. After about 4 initial deep cycles they seem to run forever in the scanner.

As I have posted before, and is documented in the manufacturer's web site links I have posted, memory is a NON-ISSUE for consumer use. It is only detectable in spacecraft batteries and other highly specialized applications where the batteries are repeatedly discharged to *exactly* the same point. What can be mistaken for memory is capacity reduction due to _constant overcharge_ or simple cell ageing. For all practical purposes, memory is a myth. Read the litereature.

>That being said, I am happy with the before mentioned 1000 mAh AA Radio
>Shack Ni-Cad batteries in my Pro-94. After about 4 initial deep cycles
>they seem to run forever in the scanner.

This is good. Deep cycleing NiMH batteries can damage them. They are not nearly as tolerant of deep discharge or contunuous overcharge as NiCDs. This is why NiCD is still the better choice for portable transcievers and other devices that require high surge currents and are often deeply discharged and overcharged. NiCD is much better suited for this. NiCD is much more tolerant of all kinds of abuse. That being said, it is still not a good idea to let the radio sit on charge for extended periods of time, as this does shorten cell life. Think about how often you have to replace the battery in a cordless phone that sits on the base all the time. Where NiMH batteries shine is in low-current continuous drain applications; I have one in a small 'travel alarm' clock that has been running for darn near a year.

It bears repeating: the charging circuit in the PRO94 is not designed to properly charge NiMH batteries; NiMHs require a termination of charge current at full charge, or the cells are susceptible to damage. The 94 does not do this. Yes, they will work, but you will not get the most out of them. Read the literature.

1826. Memory effect "does" exist

Yahoo group: pro94owners

From: bachelorsgrove_com
Topic: 1818 Message: 1826

Oh boy, there seems to be some misinformation going around about NiCads. The issue of the memory effect does exist here on planet earth.... not just in space.

Take a normal cordless phone for example. You fully charge the battery when you first get it. Now, you use the phone for about an hour and then put it back on charge which goes on for about a couple of hours. Then you use the phone again for about 30 minutes and put it back on charge for 1 hour, then use it again for 10 minutes, then 45, then 45 again and so on while throwing it back on charge after each use. These are just example times of use and recharging for the next paragraph.....

Fact, if you don't fully drain a NiCad before it is fully recharged again the memory effect can take place. If it is use to only being used for 45 minutes before you throw it back on charge again, after about 6 months to a year of this treatment it will tend to give you about a 45 minute charge. Then after this memory process has taken its toll it can lead to even shorter use times. BUT, you can revive a NiCad for the most part and not all hope is lost, but that is for another discussion. I have fixed plenty of memory issues in my day and yes they DO exist, heck I wish it didn't exist in NiCads but sadly it does! There are even times you may not get the memory effect at all it's just that strange, or "most" of the time people may never use a device that has NiCads long enough to notice that the memory effect had even taken place.

As for scanner radio users we tend to use the handheld's until the NiCads no longer let the radio power up (not fully discharge remember) but that alone can help with a "major" memory effect ever taking place, or more specifically a memory effect that will give us very short times in use. We some times use these radios for a few hours or more at a time before a recharge. As in the cordless phone example, if the battery has the capability of giving you a couple hours of use but you only use an hour's worth before giving it a full charge, and you do this consistently over many months daily, then you should be getting the memory effect. As for how bad it will be all depends on how often you keep using and recharging it like a "normal" cordless phone user would treat their phone.

By the way this discussion here does not include overcharging, that is another story. Of course there are other issues relating to the treatment of NiCads but I'll let this one rest for a while....

Pete

Hate to say it but the circuit inside the Pro-94 does not exactly support NiMH. However, I do use NiMH in my Pro-94 and the benefits for me outweigh the cons considering my radio habits.

Join the crowd, I've used them for almost two years now and don't have near
the problems that I had with NiCads. I also have them in a Pro 91 that I keep
in my glove box.
I have Lithium Ion in my cell phone and it will knock the socks off of
anything I have ever used.

What I meant was that I had to deep cycle the Ni-Cad batteries (drained them until they had only about .2 volts) the first four times before they would take a charge worth anything. The first charge powered the radio for maybe an hour and got progressively better each cycle. I'm no longer keeping track of their times but I use the radio to monitor 2 meter repeaters about 10 hours a week and usually only have to charge them every two weeks or so.

>This is good. Deep cycleing NiMH batteries can damage them. They are
>not nearly as tolerant of deep discharge or contunuous overcharge as

Oh, god, would you people PLEASE visit the links and read the docs?
I'll say it again, YES, memory DOES exist, but only in specialized
applications. This has been documented at many battery manufacturer's
websites. Here is one:

http://www.buchmann.ca/ - 'Batteries in a Portable World', available
for reading (free) online in it's entirety.

This is one of the best treatises on batteries of all types I have
seen, written by an engineer for Cadex (www.cadex.com). Please read
it. I beg you.

People who scream 'memory!' have provided no hard data. I have. Read
it. If you can prove that I, as a consumer, need to worry about memory
through manufacturer's published data, please do.

>Take a normal cordless phone for example. You fully charge the
>battery when you first get it. Now, you use the phone for about an
>hour and then put it back on charge which goes on for about a couple
>of hours.
<repitition snipped>

What you are talking about here is damage due to continuous overcharge.
The fact that the phone is being discharged a little and then placed
back on charge is of no importance, as the amount of discharge is not
exactly the same each time (no matter how regular your phone habits).
What is happening is that the phone sits under continuous charge for
long periods of time, and is suffering reduced cell capacity from
constant overcharge. This is, again, a DOCUMENTED cause of early cell
death.

>I have fixed plenty of memory issues in my day
>and yes they DO exist, heck I wish it didn't exist in NiCads but
>sadly it does!

Again, what you are witnessing is not 'memory' as classically defined.
It is cell damage from other causes that mimics memory in casual use.
Generally, all that you need to do to ensure a long and healthy life
for your Nikes is not to continuously overcharge them, and don't deep

discharge NiCD *packs* (as opposed to individual cells).

However, a documented method of reconditioning individual *cells* that suffer diminished capacity is to discharge the cell to ZERO volts and then recharge. I'm doing this right now with another flock of surplus Sanyos, some of them up to 7 years old, and it always seems to work pretty well.

>By the way this discussion here does not include overcharging, that
>is another story.

On the contrary, what you are talking about is directly related to overcharging. Please read the docs at the link I posted.

It does not support NiMH at all. Look at the (very nice) schematic
someone posted to the web; the 'charging circuit' is a resistor in
series with the supply voltage (12 ohms, IIRC). NiMH *requires*
termination of charge current at full charge, or they will suffer
damage. I suspect the reason that people seem to have such good luck
with them is they generally aren't charging them fully.

Oh, BTW, NiMH do suffer from memory as well (again, according to
battery manufacturer docs). It is just much harder to detect than in
NiCd (where it is hard enough to detect in the first place, according
to battery manufacturer docs).

Guys, instead of argueing with me about whether memory exists or not,
or whether the 94 supports NiMH or not, please do the same research I
have done. I would love for you to prove me wrong. (Actually, I
wouldn't, because I would then have to throw out all these old NiCd's
that are tricking me somehow into thinking they are working fine .. :-)
). My surplus Sanyos are from hearing aid belt packs; relatively fixed
periods of use followed by recharge. No sign of memory in any of them
yet. Also got a bunch of surplus NiMH from the same source; they are
junk. Have about a 30% failure rate on them, and they are harder to
match for packs because I can't run them all the way down to zero
without damage like NiCd.

I thought I was clear that I understood you meant NiCd... :-)
Discharging *individual cells* to zero is a documented method of
reconditioning NiCd. I do it all the time. Don't try this with NiMH,
they are damaged by deep discharge. Only do this with individual NiCd
cells, not packs, because the cell(s) that reach zero first will be
reversed (and damaged) by the cells that still have power left in them.
I built a jig from a battery holder to do this; it discharges the
cells individually with a 43 ohm resistor across each cell; when the
cells are down to around 30 millivolts or less, I take 'em down the
rest of the way with a dead short across each cell. Works great.

Thanks to all who have taken the time and effort to respond. So much to learn! ;) May I venture to ask whether a "smart" charger, capable of conditioning (discharge to an safe level for Ni-MH) and trickle charge when nearing the full charge limit, then turning itself off, would be good? Would anyone care to recommend a particular unit?

Judy

Yes, that would be very good. I've got the Rad Shack 23-425 charger,
and it seems to work well.

Exerpted from 'Batteries in a Portable World', by Isidore Buchmann.
Full text is available online at
http://www.buchmann.ca/chap10-page1.asp

<quote>
The word ?memory? was originally derived from cyclic memory?, meaning that a NiCd battery can remember how much discharge was required on previous discharges.

(Note the next sentence! ...ed.)

Improvements in battery technology have virtually eliminated this phenomenon. Tests performed at a Black & Decker lab, for example, showed that the effects of cyclic memory on the modern NiCd were so small that they could only be detected with sensitive instruments. After the same battery was discharged for different lengths of time, the cyclic memory phenomenon could no longer be noticed.

The problem with the nickel-based battery is not the cyclic memory but the effects of crystalline formation. There are other factors involved that cause degeneration of a battery. For clarity and simplicity, we use the word?memory? to address capacity loss on nickel-based batteries that are reversible.

</quote>

Perhaps a brief explanation of how I came to be where I am at is in order. I used to be part of the 'NiCds SUCK!' crowd, until I heard tales of spacecraft batteries that have been in service for 10 or 12 years and are still functioning fine. I wondered how this could be, yet at the same time, my cordless phone need a new battery every year or so. I set out on a quest to search the internet for *reliable* engineering data on batteries, and found that spacecraft achieve such spectacular life due to two main factors:

1. Cells are matched extremely closely to each other. This generally requires the purchase of several hundred cells to get enough for a couple of packs, and requires sohisticated battery analysis equipment.

2. Charge management. The batteries are not overcharged, and are not depleted to the point of damage. Sophisticated, often microcontroller-based, battery control circuits are used to ensure that the batteries are treated 'just right'.

Obviously, #1 is out of the reach of most of us. About the best you can do is sort your cells by lot code, if one is printed on the cell. I've done this with my surplus Sanyos, with good results.

We do have some control over #2, however. Talking about NiCd only for the moment, Buchmann states that batteries should not be left on charge for more than a day after full charge is reached. I think most of us can handle that. I'm, making a concerted effort to let my cordless phone run off the base as much as possible since I stuffed some (lot code sorted) surplus Sanyos in it a couple of months back. As for discharge, Buchmann states that a full discharge (excercise) once a month is basically all you need. Details are in his online book, and he covers NiMH, NiCd, and several other types as well. He also states explicitly that excercise after every full charge puts undue stress on the battery, and should be avoided. Sounds simple enough. We'll see how long this cordless phone pack lasts. My two ham transciever packs that I rebuilt several months back and have been using these techniques on are still going strong.

Hi, I joined today & although I do not own a Pro-94, I made an offer on one today & will more than likely go back tomorrow to pick it up. I do not live in a large area but due to a dis-ability, I travel back & forth several times a month to Doctors in 2 areas. I just want to know others opinion and maybe I can operate it given enough time. I haven`t had any trunking experience but I have probably owned as many scanners as a person is allowed. I felt I could put in a good selection for traveling as well. Anyway, input will be appreciated. Jimmy

Personally I would purchase a Pro-92. If you travel alot and would
take your scanner with you the computer interface is a great
feature. Also the Pro-92 is Alpha-Numeric and it allows you to know
who is talking. I owned a Pro-94 for about a week and ended up giving
it to my mother for christmas and purchased the Pro-92 and I really
like it. Its not that the 94 is not a good scanner because it is,
but I feel the 92 is much more user friendly especially if you
purchase the interface cable and get a PC program. It takes along
time to program in 1000 channels by hand.

1840. Re: whats the better scanner,94or93

Yahoo group: pro94owners
Date: 2002-07-13 16:25:57 UTC
From: Cortland Richmond
Topic: 1836 Message: 1840

Of the two, I rate the 93 a better radio, even at more money. However, the 94 does a fine job. I monitored several Seattle area systems over the 4th of July (and they were BUSY) with a 94. It's just that the 94 has been surpassed since it came out.

(The Pro-94 and Pro 92 are right now on sale for the same price, $199. The 94 is NOT the better of THOSE two, as the 92 will do more than the 94, hands down. And the 94 does not have a computer interface.)

However, you asked for comparison of the 94 and 93. Both trunk the same type of systems, though the 93 will trunk on UHF and VHF where (I believe) the 94 will not. For trunking, the 94 requires you enter all channels, the 93 only needs the control channel (for Motorola systems). A 45 channel system might have three control channels, and entering 45 channels by hand (no computer interface on the 94) takes a while.

The 94 has two, 500 channel pages, in ten, 50 channel banks. Either "A" or "B" may be accessed. The 93 has 300 channels, in ten banks of 30 channels.

It may happen that you need 500 or more channels. I filled up a 94 on a recent trip, the "A" page for this end, the "B" page for THAT end. But this is unusual, and I ended up not listening to most of the channels I'd programmed. 300 would have been enough. The smaller banks on the 93 would be a problem if you had to enter all the channels. As it is, you only need Motorola control channels (EDACS still takes all of them) so bank size is not a problem.

Both scanners will now scan trunked and non-trunked systems at once, though the *earliest* Pro-94 would only scan either trunked or non-trunked. The Pro-93 has a firmware bug that causes squelch to open if you use PRIORITY while also scanning an EDACS system (don't DO that).

Both scanners use only four batteries. Both scanners have an automatic illumination feature so when a scan stops, the dial can light up.

Good listening!

Cortland

From: Tom Cox
Topic: 1841 Message: 1841

Cortland,

That was a very informative post. I just bought a 94 at the Indy Hamfest, from a flea market vendor, because I needed some 800MHz coverage at home, and didn't have the cash for a new one. There was no manual, charger or antenna, but the price ($140) seemed reasonable, and the radio was working, tracking the Indy PD. The vendor said it was a display model from a local store, but I didn't cross-examine him. Typical flea market situation.

I downloaded a manual from RS, and started playing with the radio. The manual says the 94 will scan both trunked and conventional frequencies at the same time, but I haven't figured out how, yet. There's a lot to learn, feature-wise. Based on your e-mail, I might seek to trade the 94 off on a 92, so I can use the PC interface. I don't really need 1000 frequencies at a time, and don't have time to enter them in any case.

It sounds like I may have paid a little too much, and should have bought the 92 instead, but at that moment, I didn't know the difference. Is there a way to tell a 94 from a 94A, such as date code or serial number? Previous posts indicate there are some improvements in the 94A.

Thanks again for the informative comparison.

73,
Tom, KA5NEE/9

The catalog number on the back "20-524" will be followed by an "A" in an
outlined block. The early 94's don't track trunked and conventual at the same
time.

Needing PC control would depend on your own personal interests. The 94 serves me fine as my scanning interests are only police and fire. I also have a PC controlled base scanner (BC895) that shares the serial port on my PC with a TenTec RX 320 PC controlled shortwave receiver through an AB switch box and I have seldom used the PC control for the scanner since the new wore off.

Yes, Tom, it sounds as if you may have made the seller happy! Don't cry now; you DO have a working scanner.

ONLY THE "A" MODEL SCANS TRUNKED AND CONVENTIONAL AT THE SAME TIME. You've already gotten an answer how to tell the 94 and 94A apart by the "A" added to the catalog number on the radio. You can tell by the date code too, though I don't recall what the cutoff was (it's in the message base somewhere). Mine is 05 A 00.

If you have a "plain model" 94, you could put trunked systems in B side and convetional in A (or vice-versa) and choose which to use at any one time.

Where a PC interface is REALLY useful is loading a scanner the first time. Or if you have to reset and LOSE all the information you loaded. That is AGGRAVATING. I have several large-capacity scanners and it turns out I have not used a computer interface initally on most of them - but I should have! Spending all night wearing out buttons is a real chore. My Pro92 and 93 have been saved to a computer, and I cloned my Pro2053 from the 93 (convenient, that).

Incidentally, my data backup is a Microsoft Works spreadsheet with the scanner channels and info in it. This makes it easier to standardize settings, and share frequencies, even if data has to be input manually.

1845. Problems receiving EDACS systems

Yahoo group: pro94owners
Date: 2002-07-15 01:13:21 UTC
From: buflojohn
Topic: 1845 Message: 1845

I'm having trouble receiving EDACS systems on my PRO-94a, I've checked and have the correct frequencies programmed in the correct LCN but am not receiving anything in trunking mode. When I take it out of trunking mode I can receive. Does anyone have any suggestions? Any help would be greatly appreciated and thank you in advance. John

From: Samuel Robinson
Topic: 1845 Message: 1846

Get out of trunk mode. push PROGRAM, then push TRUNK,
push the bank number that you have your frequincies
in, then select E1, hit ENTER, then scan.
If this doesn't work I'm a big fat liar and don't ever
listen to me again.

From: Mike
Topic: 1845 Message: 1847

It may be that the frequencies were programmed while in conventional mode rather than trunking mode. Try re-programming. Press Prog and then Trunk. Then press the number of the bank you wish to program. Press up/down until "Ed" appears on the display, then press "E." Program the frequencies in the LCN order, then press Scan, then Src to go into search mode. The scanner should then scan until the control channel is found, then trunk to whatever IDs it finds. Hopefully there aren't many channels on the system you are trunking if this is the case.

1848. Re: [pro94owners] Re: whats the better scanner,94or93

Yahoo group: pro94owners
Date: 2002-07-15 08:09:06 UTC
From: Mike
Topic: 1836 Message: 1848

I will say this for the Pro-94: it has much better intermod rejection than the 92/93 and their desktop and mobile counterparts. I monitor a number of 2 meter amateur repeaters and with my Pro-2053 I have to attenuate the entire 2 meter band and nearby bands due to leakage from the local cable system. Without attenuation the signal either doesn't break the squelch or just outputs complete garbage. I have borrowed a Pro-92 and Pro-93 and both have the same results. My Pro-94 picks up the signals without a problem. This may be due to the slightly less sensitivity of the 94 but based on the published specs and strength of the cable interference I very much doubt it.

From: rookiescanner
Topic: 1849 Message: 1849

I just bought my first scanner 2 days ago (PRO 94) and I am now willing to pay someone for a class and to get the frequencies put into the system. The lady at radio shack entered some freq.(Houston Police) but all i hear is broken up and no real conversations. Is this normal? What do most people listen too? Im serious about paying someone to enter these. Thanks for any of your input!

I have probably have read through the Pro-94 manual 30 times and never picked up on the auto-illumination feature until you pointed it out. I must have mentally skipped over or ignored it every time. Showed me that one never knows everything! :) Thanks, it's a very useful thing for me to have enabled.

Topic: 1855 Message: 1856

If you can find out just which talkgroup ID's you want to monitor
(From a site on the net that lists them) you can program them into the talk
group ID list of the 94. Otherwise you can lock-out the talk groups you
don't want to hear as you monitor them by just hitting the L/O button.

Yes, you are correct. LTR uses subaudible coding on each voice channel for control. Multi-net has a dedicated control channel like MOT or EDACS. Completely different trunking algorythms are needed. As far as I know, no commonly available scanner will track multi-net LTR systems. You can still listen on a conventional scanner, and if the system is not too busy you may be able to follow a conversation. This is what we did before trunk-trackers were available for MOT and EDACS.

1867. PRO 94 is FULL?

Yahoo group: pro94owners
Date: 2002-07-23 15:41:45 UTC
From: Ron Hollingsworth
Topic: 1867 Message: 1867

I have been using my PRO 94 in trunk mode for about a year now. Whenever it picks up a channel that is static, garbage, or sounds digital in nature I simply push the S/S button and it continues normally. Last week this happened and I hit the S/S button and the display showed "FULL" and did not continue normally. I've searched the manual for this "FULL" indicator and maybe some fix without success. Does anyone know what this indicator means and how to fix it?

Thanks,

Ron Hollingsworth

It means that you locked out all the frequencies or ID's your scanner can. I think 100 is the limit, I don't have the manual handy.To be able to lock out more you have to un-lock some of the frequencies or ID's .....Ray

For all you Scanner people of the Lower Hudson Valley, Visit my web-page at:

Thanks for the info..... That is what I am doing now (following conventionally) that is.... Its not to bad, except that while scanning alot of the freq's will brodcast some "blank air" then goes right back to scanning. This probably happens every 5 seconds or so.... drives me nuts! Any solutions that you know of?

Yes, you are correct. LTR uses subaudible coding on each voice channel for control. Multi-net has a dedicated control channel like MOT or EDACS. Completely different trunking algorythms are needed. As far as I know, no commonly available scanner will track multi-net LTR systems. You can still listen on a conventional scanner, and if the system is not too busy you may be able to follow a conversation. This is what we did before trunk-trackers were available for MOT and EDACS.

1873. Pro-94 - problems programming

Yahoo group: pro94owners
Date: 2002-07-24 03:17:37 UTC
From: weaver_iris
Topic: 1873 Message: 1873

Could one of you indulge me with a little hand-holding walk-thru?

I've had this scanner for about 2 years and have just picked it back up again. I've never been able to execute the directions on pg. 26 of the manual successfully. [Storing known frequencies into Channels] I always get an error... always. No matter what frequency I try.

I've managed to do the Manual-Monitor programming for 10 temporary channels just fine. I use those to listen to our local fire department, etc.. I can scan on all the SVC channels alright as well. But I really need some help with most every other function, specifically permanently storing frequencies to scan over and over.

Any help would be most appreciated. I have AIM and Yahoo IM if anyone is free to do a walk-thru educational tutorial with me.

Thanks a million, Cate in Colorado

Make sure you enter the decimal point in the frequency.

Best solution ($$$) buy a ltr multi-net radio & have it programmed:

http://radioscanning.wox.org/Scanner/other_info/ef_johnson_trunking_equipment.htm

Otherwise, using a conventional scanner:
Use a scanner with fast scan speed
DO NOT use delay on any of the frequencies

On LTR, a 150Hz sub-audible tone under the voice is used for data transfer I think. I don't know if a CTCss tone equipped scanner would help? I do not know of any source for the data protocol for multi-net LTR, but I would not be suprised if an enterprising individual is trunking a multi-net LTR system with their computer & controlled scanner(s) now (aka Trunker), so you may want to search the net extensively for info. Good luck!

Remember, "best" depends on what you want the radio to DO, what's available, and how much it costs. As it happens _I_ consider the 93 better of the two - but others might think differently.

Subject: [pro94owners] Any luck with upgrade to 94a at Radio Shack?

I've seen many posts in the past on the non-A version versus the A version of the 94. Has anyone had any luck trading their non-A version for an A version without cost? I'd like to be able to scan trunk and non-trunk freq's. at the same time, and no another radio is not what I'm after.

Glen

If you can find out just which talkgroup ID's you want to monitor
(From a site on the net that lists them) you can program them into the talk
group ID list of the 94. Otherwise you can lock-out the talk groups you
don't want to hear as you monitor them by just hitting the L/O button.

Dick -
The easiest way is to simply familiarize yourself with the radio and manual. There are no real easy directions aside from having someone show you how to do it. Is your system Motorola? If so determine what type system you have and follow those directions. Welcome to the group!

I live in Belton and was trying to get KCMO into my scanner when I first bought it. I got all the freqs entered in just fine but I couldn't figure out how to get the talkgroups entered.....well.....my house is too far away to pick up the trunk signal. They didn't say anything about the scanner having to be actively
trunking before you could enter the talkgroups. That wasn't in the manual unless I missed it. So if you're trying to program a trunked system that's pretty far away you might be having troubles because of that.

From: sraasch
Topic: 1888 Message: 1888

I'm no expert on this scanner, but having people continually coming in and asking for the same things over and over is rediculous.

I'm willing to host a site that answers all these questions once and for all, without requiring people to go searching through these archives...

A FAQ would be easiest, with the answers in HOWTO format (or something... I'm open to suggestions). I could compile submissions from the "experts" here, and put the site up so that they could be reviewed and corrected as necessary.

Thoughts?

OK, you asked for it. IMHO, the reason that most people ask the same questions over again is that they are not aware of the list archive, or it didn't occur to them to look there. The other reason, of course, is laziness. I have a habit of spending hours searching the net myself for information of dubious usefulness, so (being basically lazy myself) I'm more inclined to just point someone towards the archives or a search engine and let them do the work themselves (like I usually end up doing). If you want to go to the effort, great! More power to ya. I tend to put information on my personal web site that _cannot be found elsewhere, to avoid duplication of effort. Yet, I still get questions (particularly off my HR2510 page) that can be answered by simply following the links that I provide on my site. So that's where I send them... :-)

1891. End Bit for Motorola Trunking

Yahoo group: pro94owners
Date: 2002-08-02 22:39:11 UTC
From: mam1081
Topic: 1891 Message: 1891

I seem to have lost my manual somewhere....

Is there a function to "turn on" the end code on a motorola trunked system? I don't know that there is for sure, but it seems sometimes I get the squelch "pop" at the end of a transimssion, and sometimes I don't. I tried adjusting the regular squelch, but it didn't seem to do it. I'm think it might be some combination of keys depressed when I turn on the scanner. Anyone know anything about this?

Mark

1892. Re: [pro94owners] This is silly...

Yahoo group: pro94owners
Date: 2002-08-03 01:30:38 UTC
From: Mark
Topic: 1888 Message: 1892

I am currently writing my own manual (as a Word document) for myself and this group because I think the big main problem is the original manuals that come with the radios (94 and 94A). We all know it's easy to cry to someone else for help after trying to read them.

I'm about half-way done so give me a couple of more days and you will be enlightened, I promise.

I do have the Introduction done and will share that with you now.

This manual is being written for the assistance in programming and using the Pro-94 and Pro-94A scanners in a more user friendly way. This manual will also try to explain what 'trunking' is so you can understand what the radio is really doing in trunking mode. I don't profess to know everything about the radios (yet) so feel free to let me know if I'm wrong about something, but I think this will be a big improvement over the original manuals.

These are excellent radios that have many fine features for scanning and trunking. However, anyone who has tried to read the manual that comes with the radio knows it can be a little hard to find, read, and figure out some of the steps, especially in the trunking section.

Even as a veteran user I can't remember everything and find myself referring back to the manual for explanations of procedures and find it frustrating trying to figure out the wording every time. I decided to write and print this for myself to make it easier to use the radio and am happy to share it with you. This should also make it easier for most people to use some of the more advanced features of the radios (and get their money's worth if you paid full-price for the radio new) as I will try to explain procedures a little more clearly and in a more logical order. I will also elaborate on troubleshooting as I have had more 'troubled' situations than the original manuals can explain to me.

I will assume you know how to obtain the basic information from the original manual such as following safety procedures, putting the batteries in, connecting the antenna, finding specs, etc. and concentrate on the main functions of the scanners.

It would be very net-friendly if you could publish it in plain-text as
well as Word format. Not everyone uses microsoft products.

I've thought about that too and will be formatting (ugh) one of
those after I finish the Word document. It's just so much more fun (and
presentable) building it in Word.

BTW, I wish I wasn't so dependent 'those' products, they're just so
damn compatible.

From: Mike
Topic: 1891 Message: 1897

Press SVC while the scanner is trunking that system to toggle this feature on and off. The squelch won't do anything on trunked systems, except that you can turn it so high that the data channel is bypassed.

>Is there a function to "turn on" the end code on a motorola trunked

Take a look at the FAQ file on IC746@yahoogroups.com. It is very extensive, and added to every once in a while by users and the moderator. There are undocumented features, as well as explanations of documented features that are not well described in the user manual, and defects and quirks that the manufacturer (not surprisingly) doesn't like to discuss. Might make a good template for a similar feature here.

If you are referring to shortwave, the answer is no. These frequencies are in the 530 KHz - 30 MHz range which this scanner will not receive. They are also usually AM (sometimes SSB) which this scanner only does on the air bands (108-137 MHz.)

No but you could do as I do and use a TenTec Rx320 (www.tentec.com/TT320.htm
) receiver which does a marvelous job (words can't describe how marvelous)
on the shortwave bands. I have a BC895 XLT scanner and the RX320 shortwave
receiver sharing the serial port of my computer through an AB switch box.
I use the Pro 94 when I'm away from the computer. or in the car.

From: Mark
Topic: 1903 Message: 1903

I'm finding out the web page part is a little trickier than I
thought and is going to take some time. For now, I'm going to concentrate on
finishing the manual and worry about that later but I will get it on a site
the way I want it eventually.
In the mean time, I have put a draft on my site as a Word document
which I can update easily. I think you'll still be able to download it as a
text document if you don't have Word when you click on the link (or past it
into your browser). I will also be formatting a text document and a wordpad
document in the future to upload the the group as soon as I get the time.

I'm no expert on this scanner, but having people continually coming in
and asking for the same things over and over is rediculous.

I'm willing to host a site that answers all these questions once and
for all, without requiring people to go searching through these
archives...

A FAQ would be easiest, with the answers in HOWTO format (or
something... I'm open to suggestions). I could compile submissions
from the "experts" here, and put the site up so that they could be
reviewed and corrected as necessary.
```

Thoughts?

I believe that is what this group is for.But you are welcome to do what you like.

1905. scan or ham?

Yahoo group: pro94owners
Date: 2002-08-07 03:00:22 UTC
From: weaver_iris
Topic: 1905 Message: 1905

How many of you scan because you don't want the hassle of getting your amateur radio license?

How many of you don't think the amateur radio license "buys" you anything (info, etc.) you can't already get with your scanner?

Do you have both - a scanner and an amateur radio? Which do you prefer?

Why do you scan instead of ham?

Personally, I have the scanner because I do not yet have my amateur radio license, but I'm doing the studying to get it sooner-or-later. I've got about 1/3 of the morse code memorized but haven't yet progressed to being good enough to copy straight from the airwaves yet. I use my scanner to listen for fire/police/emergency services etc.. Wish there was far more traffic on the ham bands to monitor.

Amateur radio isn't supposed to "buy" you anything. It is a communications hobby that allows you to talk to a vast variety of people around the world, learn about them, learn about radio, and participate in various communications events (including, but not limited to emergency communications events). Most ham radios offer wide coverage for monitoring outside of the amateur radio portion of the band.

As you probably know, morse code is not a requirement for the entry-level Technician class license, which allows you priveleges above 30 MHz. Amount of traffic to monitor is based on local activity. Here in Pittsburgh, PA you can find someone on a repeater almost anytime of the day -- morning or night.

Apples and oranges....

I had a ham license long before I ever had a scanner. I use my scanner primarily to monitor local ham repeaters, coverage of the EDACS police radio is a bonus. I couldn't care less about listening to phone conversations, business dispatchers, etc. The occasional diversion of listening to the Thunderbirds or Blue Angels is interesting.

>How many of you don't think the amateur radio license "buys" you
>anything (info, etc.) you can't already get with your scanner?

It only buys you what you want. If you are satisfied with just listening, that's great. If (like me) you enjoy talking to people from all over the world and all walks of life, including folks in outer space, than ham radio is the 'ticket'. Information? I watch the news and surf the net for my information.... Granted, you can occasionally pick up some interesting stuff on police radio, but mostly I'm just bored by it. Different tools for different jobs; scanners satisfy the voyeuristic nature of some people. Others of us get our enjoyment from actual converation.

>Do you have both - a scanner and an amateur radio? Which do you
>prefer?

I use the ham gear more. Can't talk to people with a scanner... :-)

>Why do you scan instead of ham?

So I don't have to carry three or four HT's around with me when I just want to monitor!

>Personally, I have the scanner because I do not yet have my amateur
>radio license, but I'm doing the studying to get it sooner-or-later.

Get a decent shortwave reciever and copy the nightly W1AW (www.arrl.org) code practice - nightly. Don't worry about getting 100% copy or making mistakes, just DO IT. It will come. Don't limit

yourself to the VHF/UHF range covered by your scanner, there's a whole wonderful world out there on HF!

>Wish there was far more traffic on the ham bands to monitor.

Where are you at? You will usually find the most activity on 2 Meters; depending on propogation, you might hear some repeaters on 6 Meters or 10 Meters at times. 1.25 Meters and 70 cm bands are active in some locales. Listen on 145.800 with a decent antenna and you might just hear the space station hams. Pick up a copy of the ARRL Repeater Directory and see what's out there.

The more interesting ham radio traffic is well below what the average scanner can go , most bottom out at 30 mhz. You need a high freq receiver that can tune 1.5 to 30 Mhz and is capable of tuning single side band signals. Don't let someone at Radio Shack con you in to buying a shortwave receiver that will not tune single side band signals if you are wanting to monitor the ham bands.

I started with scanners about 3 years ago and got hooked real fast.
Plenty to scan here in Denver. I'm into survival communications too so I'd
like to get a ham license when I get the time. When the shit hits the fan
and all the cell phone don't work at least you can find out what's going
on........
The real bonus of a scanner having a license is that you can use
them in (most) states that prohibit scanners in the car.

>Wish there was far more traffic on the ham bands to monitor.

With a RS ground plane and my 2042, I've picked quite a bit on the 6
meter band like hams from CA and TX talking to each other. Also some of the
amateur satellites.

1913. Re: scan or ham?

Yahoo group: pro94owners
Date: 2002-08-07 15:45:35 UTC
From: gilligancoder
Topic: 1905 Message: 1913

Well, here's my two cents worth. I have been interested in scanning for about 5 years and always wanted to get my ham license. Then the hobby died down a little until I put the scanner back in the car. I realized that I'd soon be moving to Florida, where about the only way for you to have a scanner mobile as a regular citizen is to have a ham license. So I brought out the old Gordon West tapes and had 5 wpm within about a month. I passed my Technician with morse but had no gear. So I bought my gear at the local hamfest, where I also upgraded to General, and believe me, the ham license is worth its salt. As said before, VHF/UHF is only a small piece of the action. Getting on the HF rig lets you easily talk to people all over the world. And it's nice having that VHF rig on your dash to keep you company or get you out of a bind in an emergency. Besides that, that little ham license in your glove compartment is your key to freedom when a cop pulls you over and asks about all of your scanners. So my advice is that even if you're not completely interested in ham radio, consider getting your license so you can scan on vacation or just to open up your options a little and you might be surprised how much fun it really is. Date: 2002-08-07 18:46:07 UTC
From: Mark
Topic: 1910 Message: 1914

I-Call frequencies are conventional mutual aid frequencies and
cannot be trunked. They also have nothing to do with Motorola.

See here for more info: http://www.rampart-sar.com/sarfreq.htm

1916. Re: [pro94owners] scan or ham?

Yahoo group: pro94owners
Date: 2002-08-08 04:22:46 UTC
From: KA6FBB@aol.com
Topic: 1905 Message: 1916

Hi All,

As a ham I had to comment. I scan and I use ham radio. To me they are separate but interconnected. As an emergency communicator my scanner keeps me up to date on what is happening with law enforcement or fire personnel, while I am handling traffic of a more mundane nature, often not even related to the same incidents. My ham license allows me to more completely pursue communications, not just listen to it. If an event that causes MARS, ARES, or RACES activation occurs, most of the time it has been on the fire or police frequencies for a period of time, my scanner allows me to be current on the situation before it becomes something I may need to be called upon to assist in some form. It is not either/ or, but of one aiding the other.

1917. I-Calls

Yahoo group: pro94owners
Date: 2002-08-08 18:38:37 UTC
From: mam1081
Topic: 1917 Message: 1917

The PRO-94 will not follow I-Calls. And for everyone else, I do believe the I-Call is trunked. Motorola is not the only brand that does I-Call. The GE Edacs does it too. Here in my city, the EMS will get on I-Call just to chat, or Animal Control to talk about chift schedules, and as we all know, the EDACS system puts each transission on a different frequency. I use a BC 780 XLT to monitor the I-Calls. It's still a little weird. With Motorola system, it finds and displays the Radio ID numbers (instead of a talkgroup), on an Edacs, you have to manually scan to find both Radio IDs (Sorry--it's not the PRO-94, and I'm off topic). But in any case, the pro 94 will not follow I-calls while trunking. If you conventionally scan the same frequencies (lock out the data channel), you should be able to listen to them, but it's like trying to listen to a trunked system with a conventional scanner (cause that's really what you are doing).

Have fun and good luck,
Mark

1918. Re: [pro94owners] I-Calls

Yahoo group: pro94owners
Date: 2002-08-09 00:04:18 UTC
From: Den6N
Topic: 1917 Message: 1918

I work for the NYC Transit Authority and the Motorola system is used -
these I-Calls are referred to as 'calling direct', whereby any radio user can
switch mode with a knob on the radio, and punch in a series of numbers
to call any other radio user direct. A bus dispatcher can call a specific bus,
another dispatcher, or any other radio in the system, as long as he knows
the ID number of the radio. Each radio is numbered, and that radio is
assigned to a particular person or location, so they don't change. The
direct call is done by keying in a couple of standard numbers followed
by the number of the radio, or in the case of a bus, the number of the
bus itself. Each radio has its number programmed into it, so that the
system can connect the caller to the correct radio. These calls are
outside the regular trunked system and aren't heard over the normal
talkgroups, but can be found on the -94 in conventional mode by
stepping through them until found.

Topic: 1919 Message: 1919

Radio Shack has announced a new handheld scanner the PRO-95, 1000-channels, Motorola/Edacs trunktracker. Details and a new Yahoo group dedicated to the PRO-95 can be found here...

http://groups.yahoo.com/group/PRO95/

1920. Pro-94 Manual finished...

Yahoo group: pro94owners
Date: 2002-08-14 02:17:17 UTC
From: Mark
Topic: 1920 Message: 1920

I have finished the web page for my manual. I've decided to write the Pro-94A manual separately because it just got too confusing switching back and forth (which will be next, and soon).

I've put the link in the bookmark section of this club, and here:

http://marksscanners.home.att.net/index.html

I'll also be working on the rest of the home page too.

Enjoy

From: Larry Carter
Topic: 1921 Message: 1924

WOW, I didn't know the Japanese had a different system of math than the rest of the world! ;-)

Seriously, don't give up yet. I felt the same way you did for about 3-4 days after buying mine. But now, I have started to get the hang of the radio. Mark's document went a long way towards helping me (Thanks Mark!!!). Plus some experimentation and plain old tenaciousness and I really feel like I have got a great radio. Plus I know there is still more for me to learn and improve on so I feel like the only direction to go now is up.

Hang in there, you will get it and you will be happy with the PRO-94 once you do.

1926. Pro-94 easy operations manual major error..

Yahoo group: pro94owners
Date: 2002-08-17 03:28:28 UTC
From: marc2041
Topic: 1926 Message: 1926

Upon fine tuning my manual, I noticed a major mistake. You cannot enter the trunked frequencies before progamming the trunked systems. You will get an Error message when you try to program the system.
You can only re-program fleetmaps after the system has initially been programmed.
Sorry about that and I have updated the manual.

Is it possible that all of the channels where you programmed your 800 mHz freqeuncies are attenuated? The attenuator feature is one that I seldom use, and I've found that it is easy to overlook a channel that accidentally gets attenuated.

1933. RE: [pro94owners] Finished the Pro-94A manual

Yahoo group: pro94owners
Date: 2002-08-19 04:02:10 UTC
From: Larry Carter
Topic: 1931 Message: 1933

Mark,

The manuals are great and have been a big help to me. I wanted to thank you for your efforts. I, like many people in this group, was just about to return my PRO-94 (or run over it with my car) when this group was pointed out to me.

I do have a few questions though for you or the list.

1. I am unclear on when I should have the S-Bit ON or OFF. The primary systems in my area are all Motorola Type II. So should I have the S-Bit turned on or off for this system?

2. Is it just me or does the radio interupt programming (particularly Talk Group ID entry) when it switches from trunking to "normal" frequency scanning and/or when it loses the trunks data channel and tries to reaquire it?

3. My county is split between an MII 800Mhz and 40-50Mhz standard systems. I am beginning to think that it would be best to put the standard freq's into a seperate bank so I can control the scanning of the normal frequencies by simply turning the bank off. Is this the only way to stop normal scanning while trunking or am I missing something?

4. Although I have made great strides with this radio since I bought it (8/10/2002), I am still considering returning it and holding out for the PRO-95 (Alpha tagging is a critical feature). Of course I am concerned that the PRO-95 will be a lemon and I will have missed out on having a decent radio in the PRO-94 (at least the 94 has MILAIR a first and aparently last RS scanner with this feature!) What do the members of the group think of this?

Thanks,
Larry

So am I. I'm checking around some of the trunking forums to find
out.

I've never had it happen to me but I can try it on a weak system and
see what happens.

If you want a good radio with alpha-tagging, I'd go with the Pro-92B
and it will do more than the Pro-95. See here:

1937. RE: [pro94owners] Finished the Pro-94A manual

Yahoo group: pro94owners
Date: 2002-08-19 09:57:16 UTC
From: In Case of Fire, Break Glass
Topic: 1931 Message: 1937

The PRO-94 does NOT have MILAIR...you're thinking of
the PRO-92...I think seperating the Lo-band and the
800Mhz are a good Idea...I did the same on my
PRO-93...

I just exchange my pro-94[a]1.12v for a pro-93. I was told the pro-94
[a] 1.12v was the most sensitive when i came too 800mhz reception.
The pro-94[a] was really lousy on the 800mhz band. I even tried
different antenna's, didn't see any noticable improvements in the
800mhz reception. Not to mention the really lousy audio. As for the
attenautor, i don't think the pro-94 has that feature.

1939. Comparison RS vs. Uniden

Yahoo group: pro94owners
Date: 2002-08-19 21:49:09 UTC
From: flrailfan
Topic: 1939 Message: 1939

Hello group. This is my first post to the group. I live in Florida, and primarily use my RS Pro 94 for railroad/ train watching purposes. I have a Diamond RH77CA rubber duck type antenna for mobile use.
I also own a older Uniden a Bearcat, 30 ch scanner. With just a stock rubber duck. Has anyone in here or know of anyone that has compared the two different brands of scanners before. I feel my older Uniden out performs the RS. Not sure if it a antenna thing or the electronics of the Uniden is supreme. I have used both scanners side by side with same freq's and same type rubber ducky's antenna's, and seemed the Uniden picks up quicker.
I love my RS Pro 94 because of the 1000 ch bank. I can program all AAR freq's in plus other freq's I may want to monitor while out trackside. Thanks for any input. Eric in Eustis FL FCEN mp:28

1940. Re: [pro94owners] Comparison RS vs. Uniden

Topic: 1939 Message: 1940

Side by side my pro-94 doesn't seem to pick up the AAR channels nearly as well as even a generic
30 channel Bearcat handheld. I made the mistake of comparing it to a BC760xlt, too. Ugh.

So I think you should buy a nice used pro-94! I might even know someone with one for sale! (wink
wink)

Eric,

The Pro-94 (& 94a) are produced for Radio Shack by Uniden. The antenna probably has as much to do with reception as anything. RS also has their PRO-93 on sale, alpha tags and 300 channels, and trunk tracking.

Just because part of it is made by uniden doesn't mean it's comprable to a uniden bearcat scanner.
I'm telling you, side by side my pro-94 just plain falls down.

1943. Pro 94 EDACS Trunking

Yahoo group: pro94owners
Date: 2002-08-20 03:54:09 UTC
From: hey_beer_man01
Topic: 1943 Message: 1943

I have a Pro 94 and I know that my city is on a GE EDACS system supported by Racom. I have been told that this system is encrypted and cannot be monitored by this scanner. Can this be true?

I can find data channels, but I cannot find anywhere in print the proper frequencies to monitor this system.

Brad

Could be true. Could also be hype to try and discourage scanners. I once heard a RACOM salesperson flat-out lie to a customer about thier GMARC-V system being secure from eavesdroppers. Interestingly, she continued to insist that it was secure after I showed her how easy it was to monitor (after the prospective client left, of course). Where are you at? The Lincoln, NE, EDACS sytem was originally installed and supported by RACOM (I worked for them for a couple of years and did a lot of the grunt work) until the city started their own radio shop. It is rumoured that some of the more sensitive comms are (or can be) encrypted, but most of it is in the clear (including the occasionally amusing narcotics surviellances).

>I can find data channels, but I cannot find anywhere in print the
>proper frequencies to monitor this system.

The info should be freely available. I got a list from Rad Shack when I bought my 94, even though I already had a partial list (the system had grown from 10 to 20 channels since I worked on it). Ask around. You do need all the frequencies, entered into the scanner in proper logical channel order, for trunked scanning to work.

Would that happen to be the BC60XLT-01? I had one and
I thought it was great at reception...I didn't like
the automatic delay at all, though...I sold it when I
got my PRO-93 and I'm sorry I did...I DID find an even
older still BC60XLT 10ch. for $6 at a pawn shop! The
audio is much crisper than the PRO-94. Plug a pair of
headphones into a 94 and then the Uniden or a
PRO-93...You'll notice the PRO-94 doesn't support
stereo. My Bearcat and my PRO-93 both do...

It's and interesing comparison with the Bearcat and
the PRO-94, as they're both made by Uniden!

Topic: 1943 Message: 1946

I am in Yankton, SD and one of the local Ham guys told me that the PD was on the Apco 25 digital system and that I would need the Uniden BC785D when it becomes available.

I have a hard time believing this as Yankton has only 12,000 people and I can't imagine them spending the money or why they would need an encrypted system. I can find some data channels at 867.9125 and 862.7875 and 858.9125, but I don't know if they are local or not.

Thanks,

Brad

1949. My Pro 94.

Yahoo group: pro94owners
Date: 2002-08-20 21:54:28 UTC
From: flrailfan
Topic: 1949 Message: 1949

Thanks to all that replied about my previous post the comparison between the RS pro 94 and a Uniden.
I thought that the RS scanners were made by Uniden for RS. Did not want to ruffle any tail feathers in the group.
I own a Pro94, and yes have noticed the AUDIO is indeed lacking, not very loud to note. But that might have to do with the enviroment, Rail activity can get very loud. To solve that I bought that RS lapel speaker.
I am very happy with the fact of the channel bank's 2[500] man I can store all kinds of Freq's. Instead of having to carry around a book, or search for em on the WWW. I almost bought another Uniden when I bought my 94, and what sold me is the amount of channels[1000] vs Uniden [300] at the time and not sure if Uniden has come out with one that stores more yet. Another drawback for Uniden is that Battery pack, trash! I had a awesome Uniden cordless phone, and in a short time you were not able to find the Battery pack replacment for the phone. SO how long will it take for that to happen to the scanner?
Has anyone come up with a homemade shoulder type scanner holder/harness? Sorta like the type used by railroad employees for their two ways. I have a found a place online that sells some, but it's more fun to create/improvise your own. Thanks. Eric in Eustis FL FCEN mp:28

Oh, well that's different. (I think). Digital and encrypted (which is
what your original question referred to) are not necessarily
synonymous. I'm not familiar with the Apco system.

>I have a hard time believing this as Yankton has only 12,000 people

>an encrypted system.

Could be, but if they are already digital, encrypting is a simple thing
to do. Ignoring any licencing fees for the encryption algorithms
and/or codecs, of course.

Uniden is by far much better quality electronics, everything
i have bought rs for years then i decided to fork out a little more cash and was very impressed!

Side by side my pro-94 doesn't seem to pick up the AAR channels nearly as well as even a generic
30 channel Bearcat handheld. I made the mistake of comparing it to a BC760xlt, too. Ugh.

So I think you should buy a nice used pro-94! I might even know someone with one for sale! (wink
wink)

1952. Priority on (Trunked) Scan List

Yahoo group: pro94owners
Date: 2002-08-21 03:59:44 UTC
From: joetortorelli
Topic: 1952 Message: 1952

I ran a quick search thru the archives and came up empty handed... unless I'm just not searching correctly. I've gone through the process, as stated in the manual, and I've done this for about a half hour, and am coming up with nothing.

Here's my situation:
I have an EDACS system in Bank A-1
I am utilising 3 of the scan lists:
1- Dispatch
2- Fire
3- Police

In List #1, I want the EDACS ID "04-043" as the Priority, and as it is entered in the list, it is in the Ch. 3 spot.

Everytime I follow the directions to set this as the priority, I come up with an "error" message. It says to "...enter the desired ID number...", so after hitting program, I've tried both entering "04-043" and the actual channel number (3), and both get me nowhere.

Where am I going wrong? Thanks for your help in advance!

- Joe
worcester, ma

ps-
also, I am running my Pro 92 and Pro 93, along with the 94. I notice the 92 doesn't track as well as the 93 and 94, however, the 94 seems to have major hiss at times, as if it's not getting full reception. I don't recall this happening when I first purchased the scanner, which was the first trunking Pro I bought 2 years ago. Any ideas?

You need to enter both the list number and the channel number. For example, press Prog while this system is trunking to go into its programming mode. Enter "13" (list 1, channel 3) and then press Priority.

Not really related, but a while back I discovered you can press the H/S (Priority) button while in programming mode and it jumps from one list to the next so you don't have to scroll through each channel with the arrow keys. Is this documented in the manual anywhere? I did not see it.

It's totally possible that your town is on a digital
TRS...Lots of small towns join the system once the
county or several agencies buy into it...
